Victory for Micro Power Broadcasting - Historical Defeat for the FCC

On Friday, January 20 Federal judge Claudia Wilken refused to
grant the Federal Communications Commission a preliminary injunction to
stop the micro power broadcasts of Stephen Dunifer and Free Radio
Berkeley. Stating serious constitutional concerns as her reason, Judge
Wilken denied the request, ordered the FCC to exhaust administrative
remedies and to rule on Dunifer's appeal of their $20,000 fine before
seeking any further court action. This ruling sets a historical
precedent: it is the first time the FCC has been denied an injunction to
stop the broadcasts of an unlicensed radio station. The Commission will
have to address the issue of the constitutionality of their regulations
when ruling on Dunifer's appeal. Any further court proceedings are
delayed until the FCC acts on the appeal which has languished in
Washington for more than a year. In the meantime the government's attempt
to enjoin broadcasting by non-licensed micro radio has been put on hold.
Luke Hiken, attorney for Stephen Dunifer, stated, "This is the
second time a Federal court has recognized the constitutional implications
of micro radio technology. We hope the FCC will recognize the importance
of facilitating the use of this technology for the benefit of the American
people instead of denying its existence and obstructing its use."
Speaking on behalf of the National Lawyers Guild Committee on
Democratic Communications, Peter Franck commented, "The CDC hopes that the
court's refusal to enjoin micro radio is the beginning of a recognition by
the country that any hope for democracy depends on free access to the
airwaves. Micro power broadcasting has the potential for creating a
'green movement' of low-cost, easy-to-use media. It is as totalitarian to
require expensive, hard-to-get licenses for micro radio as it would be to

say you can only speak from a soap box if it is made of gold."
Stephen Dunifer said, "Judge Claudia Wilken's decision affirms the validity of our legal position. Further, this victory is a credit to four years of work by the National Lawyers Guild Committee on Democratic Communications and my attorney, Luke Hiken, on behalf of the micro power broadcasting movement. Unlike FCC attorney, David Silberman, I do not see irreparable harm resulting from micro power broadcasting. Instead, I see an immeasurable benefit for all citizens if the micro power broadcast movement prevails. For too long, media access and the tools of communication have been concentrated in the hands of corporate and essentially anti-democratic interests. If any harm results, it will be to those monopoly interests."

****

Seize the Airwaves !

With the FCC's recent loss in Federal District Court now is the time to seize the space before this window of opportunity slams shut. If micro power stations take to the air in massive numbers the FCC will be confronted with a regulatory and enforcement nightmare at a time when they are still trying to figure out how to respond to January's ruling.
Further, we must take other proactive steps to ensure our eventual success. Consensus must be reached on what type of regulatory structure, if any, we are willing to accept. At the moment, a simple two page form has been proposed. You would: fill this out with name, address, etc.; state that the equipment be used meet certain basic requirements for frequency stability, harmonic attenuation, etc.; that the power level does exceed a certain level (perhaps two ceilings, one for urban and one for rural); list the frequency used, power and studio location. At that point, after mailing the form back with a modest fee of $25 or so, the burden of proof would be on the FCC for interference and other issues. Let us know your ideas and thoughts on this. We need to have something in hand when asked "Well, what do you propose ?"
More technically knowledgeable people are needed to provide assistance and act as mentors for those who lack the requisite skills to build the kits or put a station on the air. Everything possible must be done to ensure that the micro stations are putting out a clean and stable signal. Any sort of interference and instability will just be ammunition for the FCC.
Finally, continued support for our efforts is crucial. We wish to thank those who have already contributed to this effort. Our total costs involved in putting out this edition are over $1000 including postage. Much has been accomplished in the last three years. Your financial contribution will help ensure the continued success of this movement to take back the airwaves. Further, any donations of equipment are needed as well. In particular we need: high speed tape duplicators; a good quality copier; electronic test equipment such as a spectrum analyzer; tape decks - portable cassette, studio type and DAT.

****
Giving Voice to the Voiceless - Micropower Broadcasting

As night rolls across San Franciso Bay and rushes westward, micropower FM transmitters spring to life at the flick of a switch bringing new voices to the FM broadcast band. Voices that defy and challenge the FCC's control of the airwaves. Radio Libre (103.3) operating from the Mission District offers a diverse and multicultural programming mix in both Spanish and English. In the western portions of the city San Francisco Liberation Radio (93.7 FM) provides the only unlicensed call-in talk show broadcast along with excellent documetaries on local and national issues. Comic relief is provided by the Jolly Roger Radio Comedy Troupe who satirize everything from the Olympics to local politicians. SFLR also produces the monthly Food Not Bombs Radio Network program heard on a number of stations across the United States and Canada. New voices will be soon taking to the air in the SOMA (south of Market St.) district and the urban district known as Hunter's Point (107.3 FM) in eastern San Francisco. A new voice (88.1 FM) has made its apperance in North Beach as well.

To the north across the Golden Gate Bridge alternative voices are heard in Sausalito, San Rafael and other areas of Marin County. Meanwhile, covering the East Bay cities of Berkeley, Oakland El Cerito, Albany and Alameda, Free Radio Berkeley (104.1 FM) is continuing its Sunday night broadcasts, soon to be expanded to at least 3-4 nights a week or more. Further to the south in areas populated by migrants and farm workers voices of the mexicano, la Raza and Zapatista are taking to the air as well. Much further to the South across the Rio Grande, transmitters built by Free Radio Berkeley are on the air in the barrios of Mexico City and the state of Chiapas.

Indeed, a revolution is underway here and other parts of the country and world as well. Seeking to break the corporate media stranglehold on the free flow of information, news, ideas, cultural and artistic expression, these low cost and relatively low power (1 to 30 watts) FM broadcast stations are establishing themselves as voices of the voiceless. Futher, most are urging everyone to fight back against a racist and corrupt system by not only providing the poetry, music and spoken word of inspiration but the vital information required for an empowered struggle. Where else can one hear the voices and art of street poets, gang members, homeless persons, activists, punkers, immigrants and many more ? Truly, micropower broadcasting is technology for the people.

Inspired by Mabana Kantako of Black Liberation Radio, Free Radio Berkeley was pivotal in the current micropower broadcasting movement by its open defiance of the FCC and ongoing legal challenge to its regulatory authority aided by the National Lawyers Guild Committee on Democratic Communications. Free Radio Berkeley offers a complete line of kits which enable anyone with some degree of technical skill to assemble their own tramsitters. A complete station can be put on the air for less than $1000 compared to the $50,000 to $100,000 under FCC guidelines. Workshops and training are offered along with a growing list of technical mentors to aid in the creation of micropower broadcasting stations. If you have electronic skills you can make a very valuable and vital contribution to

this movement by teaching and training others.
Of course, this is not happening without reprisals from the Federal Government. Stephen Dunifer of Free Radio Berkeley has not only been threatened with a $20,000 fine by the FCC but was the target of a preliminary injunction sought by the FCC to silence his broadcasts as part of Free Radio Berkeley. On Friday, January 20th, 1995 Federal judge Claudia Wilken refused to grant the FCC a preliminary injunction. Never before in the history of the FCC have they ever been denied an injunction to shut down an unlicensed station. A very important battle has been won, more will follow. Other individuals such as Richard Edmondson of SF Liberation Radio and Bill Dougan of Phoenix, Arizona have been threatened with fines of $10,000 and $17,500 respectively but are not facing the possiblity of court imposed sanctions at this time.
Micropower broadcasting is more than the leaflet of the 90's it is a tool by which to organize and bring about fundamental social change. For far too long the corporations have been allowed to steal and fence off the natural resources of this planet, including the airwaves. It is time to tear down the fences, grind the no trespassing signs into the ground and take back what belongs to everyone on this planet. We need to use these resources for the good of all instead of the self- agrandizement of the few. If you want to make micropower broadcasting a reality and a revolutionary force in your community, contact Free Radio Berkeley.

A TALE OF TWO BROADCASTERS

By Jeff Cohen and Norman Solomon

Jack Welch oversees a project that fills America's airwaves with millions of watts. His outfit has committed felonies that include bribery and large-scale fraud.

Stephen Dunifer oversees a project with 15 watts of radio power. He and his organization have never been found guilty of a crime.

Guess which man is in trouble with the Federal Communications Commission.

It isn't Welch, the chair of NBC's parent company, General Electric. In spite of a criminal rap sheet as long as transmitting tower -- with massive swindles involving sales of military equipment -- GE continues to run NBC's broadcasting operations.

In theory, the FCC evaluates the "character" of would-be broadcast licensees. A few years ago the agency declared it would "consider all felony convictions" and sometimes even misdemeanors. But GE, a corporate felon, has gotten no grief from the FCC about its criminal record.

On the other hand, Stephen Dunifer is one of the FCC's prime targets. He has developed a low-cost, low-watt way that neighbors can use radio to communicate with each other. For $600, he discovered, people can build a mini-station and go on the air.

Dunifer takes seriously the idea that the airwaves belong to the public, not just those with big bucks. Worst of all, from the FCC's vantage point, Dunifer has spread the idea around.

His nonprofit newsletter recently touted gizmos like "a phase lock loop controlled half-watt transmitter kit," designed to meet "all the technical objections of the FCC regarding drift and harmonic interference."

But Dunifer's emphasis is hardly technical; it's community oriented. His newsletter hails micropower broadcasting as a tool that communities can use to break down the barriers of "suspicion, mistrust, anger and violence" bred by a lack of communication.

The micropower concept got a boost four years ago, when Mabana Kantako -- living in a housing project in Springfield, Ill. -- founded Black Liberation Radio, a low-watt station.

Dunifer, who lives in Berkeley, Calif., learned from Kantako's example, and set to work refining the micro-technology. Now, he says, "We are riding the wave of a movement that will not be stopped." He may be right.

Across the bay, in San Francisco, two independent microbroadcasters are on the radio every night.

In the Mexican state of Chiapas, microradio programs aligned with the rebel Zapatistas can be heard, courtesy of equipment supplied by Dunifer. In downtown Mexico City this fall, a central traffic island became the base of Radio TeleVerdad ("Radio Tell- the-Truth"), providing five-watt FM transmission while hundreds of thousands of vehicles passed by each day.

When we spoke with founders of Radio TeleVerdad a couple of weeks ago, they seemed determined to continue their independent broadcasts -- despite an Oct. 19 raid by 150 Mexican police, who swarmed over the traffic island and confiscated the transmitter

In Taiwan a few months ago, several thousand government troops raided 14 unauthorized makeshift radio stations on the same day. Protests and riots ensued.

Here at home, the FCC has slapped Stephen Dunifer with all kinds of legal documents, threatening to fine him $20,000. The goal: to prevent him from going into hills near his home and airing a mix of music and political commentary. But Dunifer keeps transmitting "Free Radio Berkeley."

A guiding principle of microbroadcasting is that small-scale decentralized communication can nurture democracy. In contrast to media behemoths, requiring huge financial resources and dominating wide geographic areas, microbroadcasters don't need a lot of money -- and if a listener wants to talk with the broadcasters directly, they're no more than a bicycle-ride away.

The FCC contends that such unauthorized broadcasts interfere with big-power licensed stations. But Dunifer points out that in neighborhoods there are many openings on the dial. After about 100 of his broadcasts, Dunifer says he has yet to receive a complaint of radio frequency interference -- except for objections from FCC officials, who went out of their way to intercept and monitor his signal with their radio gear.

San Francisco attorney Luke Hiken asserts that the FCC actions against his client are "content oriented," motivated by government hostility toward Dunifer's anti-establishment activism. Hiken cites unlicensed radio broadcasters operating with FCC knowledge but without FCC opposition -- such as an unauthorized Southern Oregon station airing Tommy Dorsey music.

Even if the FCC is able to stop Dunifer -- who has invited federal enforcers to "kiss my Bill of Rights" -- it's probably too late for the feds to short circuit microradio. Says Dunifer: "It is our intent and purpose to see thousands of transmitters taking to the air in an all-out, no-holds-barred movement of electronic civil disobedience."

While Dunifer does battle with the FCC, the General Electric moguls in charge of NBC are engaged in a very different turf battle -- with a competing media giant, the Fox TV network.

In early December, Fox went to the FCC with a petition challenging General Electric's control of broadcast licenses in view of GE's "pattern of illegal activity." The Fox petition was a counterattack against GE, which a week earlier had told the FCC that Fox's foreign ownership violates federal rules.

The chances are tiny that the FCC will banish GE from the broadcasting business. But if lightning strikes and GE loses its status as a mega-broadcaster, Jack Welch might want to consider trying his hand at a more humble role.

For a few hundred dollars, Welch can set up his own 15-watt radio station. Stephen Dunifer would be glad to show him how.

Jeff Cohen and Norman Solomon are syndicated columnists and the authors of "Adventures in Medialand: Behind the News, Beyond the Pundits" (Common Courage Press).

Some Comments and Excerpts from The United States of America Vs Stephen Dunifer

by The Black Hat, FRB Programmer

What happened on January 20, 1995 was a continuing play of historic events that embraced the acts of those who were in attendance in the United States District Court of the Northern District of California in San Francisco.

These included (in spirit) the Plaintiff, the United States, an oppressive geo- political entity that resides between the sovereign states of Canada to the north and Mexico to the south and in body its representatives: David Silberman, an attorney for the FCC and Patricia Duggan, special assistant United States attorney. Also appearing for the Defendant, Stephen Dunifer, a political activist, an anarchist and a twenty five year veteran of street action: Louis Hiken, his attorney, and Peter Franck, an attorney.

Sitting on the bench is a person who recent decisions have given hope to many struggling groups and individuals: the (very) honorable Claudia Wilken, United States District Judge.

Neither the Plaintiff nor the Defendant speak as the drama of the day unfolds: Ms. Duggan, Mr. Hiken and Mr. Silberman introduce themselves to Judge Wilken, referred in the transcripts as "the court". She responds:

The Court: Well, it seems to me that there are some constitutional issues here with respect to the FCC's regulatory scheme. It appears that this Court is not the one that would rule those....it seems that what this Court should do is allow the FCC to have its consideration of the issues, which it could do in the context of the pending forfeiture action [the $20K fine against Stephen Dunifer by the FCC]. If Mr. Dunifer or anyone else doesn't like what the FCC does, it can appeal it, I presume.

Judge Wilken is making the case for the constitutional effects of the FCC's restriction of broadcast under 100 watts. She is attempting to redirect the FCC back to its own internal processes as a means to address the issue before the court that day.

Mr. Silberman interrupts her thought and interjects peevishly:

Mr. Silberman: No, Your Honor. And we disagree that the pending forfeiture matter has any effect on this Court's jurisdiction...to issue an injunction to prevent a continuing irreparable harm...

He attempts the argument that all other FCC means to stop Stephen's broadcasts have been "exhausted" and the FCC must ask the court to stop him with an injunction.

Mr. Silberman: Your Honor, we believe that there is a major difference between a preliminary injunction, which is to prevent further violations of the law and the forfeiture matter which is pending at the agency.

Judge Wilken reminds Mr. Silberman of the FCC's "primary jurisdiction" and he objects, claiming a "major difference" between the request for an injunction and the $20,000 fine. Clearly Mr. Silberman has been taken by surprise and indulges in a lengthy harangue at Judge Wilken.

Mr. Silberman: The forfeiture deals with two of the 24 illegal broadcasts. And not to issue an injunction would allow the lawlessness to continue...Section 504(a) of the Communications Act requires the commission to ask the United States to file a complaint against the Defendant, Mr. Dunifer to recover the amount of the [fine]. There would be a trial...on that matter which could take some time...[I]n our view, the case that we cite to you...addressed that issue about exhaustion. The statute specifically authorizes this Court to issue an injunction if there are violations of the statute. The substantive charges are not disclaimed or denied in this case. there is an ongoing violation of Communications Act because of making radio transmissions without a license...We've proved

irreparable harm because the statutory violation gives us that presumption.
The Court: Not if the statute is unconstitutional.
Mr. Silberman: Your Honor, there is no facial challenge to the constitutionality of the Communications Act, Section 301, in this case.
The Court: There's a challenge to the regulatory scheme.
Mr. Silberman: And if the defendant, or anyone else who wants to operate a radio station, wants to challenge those regulations, they can file a petition for rule- making at the commission...All of the cases support us, your honor...In every case where an injunction has been requested by the Government to prevent unlawful, unlicensed broadcasting, the District Court has granted the injunction. There is no case that we are aware of... [where] the Government has proved an unlicensed radio operation where the Government has been denied that injunction. And there's a very good reason for that. Unlicensed broadcasting creates chaos on the airwaves. It's anarchy on the airwaves. And to allow and not to enjoin this kind of operation, the Court should consider that in doing so it encourages continuing violations not only by the Defendant, but by those who would also see this as a signal that the law is not going to be enforced.
Mr. Silberman is clearly beginning to squirm and chafe under the idea that he may not only not get his injunction, but that Judge Wilken may take the FCC to task for it's procedures and require some clarification of Stephen Dunifer's rights under the present circumstances. The judge has no problem admitting that she could in fact do something on behalf of the situation, but turns the matter back to the FCC saying that they have preempted their own available procedures and prematurely brought the matter to the court.
The Court: I don't dispute that I have the jurisdiction. My concern is that if there were--and I think there are--serious questions about the constitutionality of [your] regulatory scheme, and if the FCC is meant to address those before I do, or in fact to the exclusion of me addressing them, how can we obtain the FCC's rulings on that so that they can then be reviewed by some court...My thought was that we could do it in the context of the forfeiture action. This action could be stayed. The forfeiture action could be ruled upon. You say it would have to go to the District Court first, right?
This bombshell from Judge Wilken sends Silberman into a panic and he tries to demonize Stephen Dunifer and his broadcasts and criticizes the actions of the court in this context.
Mr. Silberman: That's right. And then there would be an appeal to the Court of Appeals and then the Supreme Court, all the while if there was no injunction by this Court, Mr.Dunifer would have the freedom to violate the law. And this Court, by not issuing an injunction, would permit him to violate the law...Your Honor, the Defendant has a right to go to the commission and ask it to change its mind. What this Court should do is issue an injunction to prevent him from continuing to broadcast, because each broadcast provides for irreparable injury.
Mr. Silberman is unable to resist throwing in a personal note that reflects on his age and what he presumes to be the age of Judge Wilken.

Mr. Silberman: The constitutionality of Section 301 was established right after I was born and before you were born, Your Honor, in 1943 in the NBC case. The Supreme Court said, "No one has a right to operate a radio station without a license, and the scheme for licensing is constitutional." ...The law is clear, Your Honor. An injunction should issue.

Judge Wilken now turns to Mr. Hiken, Stephen's attorney. In the course of their conversation, Mr. Hiken makes it clear how the FCC will not listen to requests for rule changes under its own regulations. He punctures the argument that FRB broadcasts are any sort of "emergency", given the nature and amplitude of micro- power broadcasting. He points out the position of the FCC in not recognizing the "standing" of person to challenge their "regulatory scheme".

The Court: Why don't you petition for a change in the rule to the FCC?

Mr. Hiken: We believe that...the forfeiture hearing is a perfectly legitimate forum within which to raise this.

The Court: Maybe so, but why not file this petition to change the rule, in addition to it?

Mr. Hiken: [refers Court to book] [This] book outlines the history of the FCC from the period of 1928 to 1935 in which the radio industry...was placed in the pockets of the corporations that have controlled them since. The idea that the FCC does not have before them the information they need to initiate rule proceedings on their own is ludicrous. There is a broadcaster in Springfield [Illinois] who has been broadcasting 24 hours a day, a blind African American man, for five years. They gave him a forfeiture order five years ago. If there is an emergency, why is it that they haven't done anything about that? There's no emergency in this case. And we would point out to the Court that the suggestion you were making is exactly what should occur here. We made a request in the forfeiture order that "If there were proceedings or rules or means whereby we can raise this issue for your consideration, please give them to us." We did that a year and a half ago.

The Court: Right. But what they are saying is you're supposed to file a petition for a change of the rules.

Mr. Hiken: But the petition for change of rules is a procedure which is applicable...only if the constitutional standard is appropriate and legitimate...

The Court: I don't follow that. Why can't you go to them and petition that they change their rule that says they won't license a low amp station or whatever it is?

Mr. Hiken: [T]he equivalent to...their law is if people can't go into the parks and speak because we're finding...litter and things like that and people are saying "That's unconstitutional." There's no need to go petition the rule-making authority to say, "We asked you not to have this unconstitutional rule and law." This microradio we're talking about. To compare this...with something that Ted Turner or KCBS is using with 100,000 watts over the airwaves is ludicrous. Mr. Dunifer does not have the kind of funds or the ability, nor do any of the people that are involved in trying to regain just a voice over the radio, have the means to go to the FCC and do this.

The Court: Maybe you don't have to do it, but what's the problem with it?
Mr. Hiken: In the Duggan case that was argued a year ago, Justice Kleinfeld asked Mr. Silberman to brief the question of: "Why does the FCC regulatory scheme ignore microradio. Would you please explain why you're dealing with this technology the same way you're dealing with megawatt stations?" The FCC said that a person even who had received a forfeiture order did not have the standing to go into court to challenge their regulatory schemes...If you read the decision in Duggan you will see that the Court...was saying, "No, that's not so." The second you issue a forfeiture order, the person has standing to go into Federal Court...Our feeling is that the proper procedures to challenge the legality and constitutionality of their scheme is before the FCC itself first...Their own act gives them the authority to initiate rule-making procedures anytime they feel it's appropriate.
The Court: So if you get an adverse decision from the FCC...you would take it to the District Court, would you?
Mr. Hiken: When and If they will finally give us a ruling before the FCC, we'll be back here. That's why we request that you stay these proceedings. If there's an emergency, they can rule on those issues so that you will have the benefit of knowing their analysis.
At about this point Mr. Silberman objects and asks to interject that only the Government can a initiate a lawsuit based on recovering a fine and then the Defendant is subject to trial. The Defendant cannot start this action. In effect, if the FCC chooses not to collect its fine, it need not defend its regulations in court unless it decides to do so.
The Court: Would you do that?
Mr. Silberman: What?
The Court: Will you do that?
Mr. Silberman: It depends on what the commission does. And we do try to recover forfeitures.
He waffles playing a what-if game. This is a topic Silberman would clearly like to avoid. Just as they have avoided dealing with that other matter in Springfield for five years. He shifts gears and goes on another long whining harangue, citing the same cases and regulations, apparently having played out his arguments he tries to give them added strength by repeating them again ad nauseam. This proves too much for the attorney for the defense.
Mr. Silberman: And we're entitled to an injunction because we've proved in our papers that there is irreparable injury. And they don't challenge that, really.
Mr. Hiken: Your Honor, he's repeating himself.
Mr. Silberman: Well, may I just....
Mr. Hiken: It's my opportunity to argue, I believe, sir.
Mr. Silberman: I'm sorry. I'm sorry.
The Court: That's all right.
Mr. Silberman: But irreparable injury...
The Court: Well, they do challenge...
Mr. Silberman: And there's no adequate remedy at law.
The Court: There's no adequate remedy at law for who?

Mr. Silberman: There's no adequate remedy at law for the Government here.
The Court: For the Government?
Mr. Silberman: No. there is not, because every time there is a broadcast it's irreparable harm.
The Court: Well, it's sort of an odd statutory scheme and regulatory scheme, but what it leaves me with is I have to balance your likelihood of prevailing and the harm to either side. And what I think is relevant to that is the constitutionality of the regulatory scheme...So I think what I have to do, in order to carry out the test I need to apply is to turn to the FCC and ask them to do what they are supposed to do, and tell us whether this regulatory scheme is required and proper and still correct in light of existing technology. Then I can decide on the constitutionality.
Mr. Silberman indulges his previous arguments one more time. To paraphrase Mr. Hiken, Silberman seems to think that if he repeats his arguments often enough, someone will finally believe them.
The Court: Well, my inclination is to deny the preliminary injunction and to stay the proceedings and turn to the FCC to act on it in the context of the forfeiture proceedings, so that this Court will have their guidance with respect to the need of those regulations and the balancing of the need for the regulations against the constitutional interests of the people who wish to broadcast and so forth.
As the matter begins to wind down, Ms. Duggan steps into the fray for clarification and makes it possible for Mr. Silberman to makes his penultimate "can of worms" argument.
Ms. Duggan: If I could ask for a point of clarification about when the Court is saying "a stay" are you expressing an inclination towards denying the preliminary injunction?
The Court: I'm denying it at this time. I would say without prejudice.
Ms. Duggan: [The injunction] is not being stayed, but the further proceedings after the preliminary injunction are being stayed.
The Court: Right. Because I can't make a final ruling without turning to the FCC first to do its statutory evaluation.
Mr. Silberman: Your Honor, I know you seem to make your decision. When we have a rule-making proceeding...that could affect the public at large and other broadcasters...there would be a requirement for notice and comment. And it could take months to years to resolve that question. Is Your Honor saying that we would have to have a rule-making proceeding, open up for public comment, have the staff consider the recommendations, provide a report...to the commission, and go through the judicial review process if someone were to challenge any new rules or to challenge the decision not to adopt new rules? This could take years.
The Court: That's not what I'm saying at this point.
Mr. Silberman: Because that's precisely what's going to happen, Your Honor. Your Honor, this opens up such a can of worms. You don't realize. I mean it. Your honor, what would happen would be that you've given carte blanche to this group of people who think they can operate a radio station without a license...This is turning it on its head, Your Honor. I know you are inclined, and you've made a determination. But it opens up such hazards to the public interest that I want you to realize what you're

doing...
The Court: I didn't find such egregious hazards on the records. I mean, if there is some further showing that you want to make at some point, I can't prevent you from doing that.
Though a court date was set for early March for a showing by the FCC, this was later postponed. As of this date April 25, 1995, nothing has emerged from the FCC, and something is expected within the first two weeks of May. If ever. After all, to quote Silberman, this could take years. Hold on to your transistors, it could be a bumpy ride.

****

FRB Interviews FCC on Fine Structure

by Carol Denney

FRB: One curious aspect of the current administration of the Federal Communi- cations Commission is its seemingly arbitrary assignment of uncollectible fines to people accused of broadcasting without licneses. How does the FCC structure its fines? Is there actually some kind of system? To find out, we asked an FCC agent shivering in a van frantically twisting dials outside the suspected location of a pirate broadcaster. Mr. FCC agent, is there actually some kind of system?

FCC AGENT: Of course we have a system. It's just too complicated for lay people to understand. We take the average daily temperature divided by the current interest rate, factor in the price of gasoline, premium gasoline, that is, and then multiply by 14% of the amount of people who voted in the latest mayoral election according to the municipality of the radio pirate in question, subtract twenty-nine and there you have it; a rational, ob- jective formula for the assignment of fines to pirate radio broadcasters.

FRB: Was this always the method used for the assignment of fines?

FCC AGENT: No, we used to use a dart board and a blindfold, but it was sug- gested to us that this might be perceived as somewhat arbitrary. . .being good public servants we began a course of serious study with renowned experts to, uh, refine this method.

FRB: What other methods have been used?

FCC AGENT: Well, for a few years we experimented with an FCC secretarial pool lottery system, after which we moved to more complicated formulas based on the third horse race at Santa Anita, then for several months we relied on adding up the numbers in the first forty license plates through the Bay Bridge toll plaza at midnight. These are valuable indicators, of course, but we believe our current methods offer a truly scientific rationale.

FRB: Will the FCC be further improving its current fine selection method?

FCC AGENT: Well, we take our duty to discourage pirate broadcasting extremely seriously so despite the fact that we have no way of actually collecting any of these fines, we tirelessly continue to experiment with

fine structures hoping that someday the pirate broadcasters will surrender their headphones in defeat. Our latest experiments involve an inverse ratio of atmospheric negative ions to salt content in canned soup, carefully factoring in other numerical indicators such as football scores and stock prices. The American people can be proud.

FRB: Of course, of course. We've been listening to an FCC field agent explaining the creative aspects of the FCC fine structure. Back to you in the studio. . .

****

Micro Radio on the Road

by Keith McHenry

As part of a Food Not Bombs tour of 22 cities I demonstrated a 5 watt FM transmitter at every location. It started up without a problem on the first night in Dallas. The system was simple. I plugged my boom box into the mixer and I connected the mixer to the transmitter. The power supply went to the transmitter and the cable to the antenna hooked up to the other side of the transmitter. It took only fifteen minutes to put the system together. I had local Food Not Bombs people lock into a dead frequency and tune the transmitter in themselves. They loved it. The next night I broadcast the concert at the Engine Room in Fort Worth. People were so excited about the live show going out over the air that much of the audience went to the parking lot and listened to the event on their car radios. Micropowered radio was a hit in all 22 communities. The transmitter worked well even after it was dropped from a three foot high table onto a hard wood floor three times in Kansas City. I broadcast that concert as well. New York City and Chicago were the only two cities that have very little dead space on the band. My hosts in Canada thought we would lose the transmitter crossing the border. I left the mixer, microphone, power supply, etc. in Burlington, Vermont when I went to Montreal. The people in Burlington broadcast for 12 hours while I was in Canada. They called their friends and had them tune in. They said it went all over town.
The first video we presented showed C.T. and I talking about Food Not Bombs International Gathering on San Francisco Liberation Radio. One segment shows us receiving a call from one of the food servers who talks about that night's meal. Another segment shows Stephen Dunifer building a transmitter and encourages the viewer to attend the Gathering where workshops will be held on setting up a micropower FM broadcast station. Other workshops will cover all aspects of community organizing. Everyone is invited to come to San Francisco for the Gathering from June 19th to June 26th. A special Gathering station will on the air at 87.9 FM. For more information call 1-800-884-1136.

****

San Francisco Liberation Radio Rocks On After Two Years

by Richard Edmondson

From children's programming to talk shows on controversial issues, San Francisco Liberation Radio continues to offer progressive broadcasting to the people of west San Francisco as we get ready to celebrate our second anniver- sary.

In our two years on the air we have gone through some unbelievable changes--from broadcasting by flashlight one night a week while battling wind and weather on Twin Peaks, to the smooth, steady seven night a week operation we have now in the comfort of a Richmond District house.

It gave us an awesome feeling walking through Golden Gate Park after the storms in January and March and seeing all the huge, tall trees that had been knocked down by the wind. To think that our antenna made it through all that --battered perhaps but still flying proud and high--well, high fives all around. And we didn't miss a single night on the air!

San Francisco Liberation Radio continues to offer the best children's pro- gramming anywhere in the Bay Area--on Annie Voice's program, "Time Out!" In April Annie began reading "The Night of Wishes" by Michael Ende, a metaphori- cal tale about the wealthy making deals with the devil. In the story the devil is very upset because Beelzebub Preposteror, who in exchange for extra- ordinary wealth and power over his fellow mortals, has not been fully living up to his end of the bargain, so the devil sends his servant, Maledictus Maggot, to lay down the law: more rivers polluted, more trees cut, and more species rendered extinct. . .or else!

"We try to pick stories that are not only entertaining but also teach children to care for the Earth," said Annie, who in addition to being a micropower radio broadcaster, has also been a pre-school teacher for the past eight years.

We'd like to welcome back Keith McHenry as host of "Voices of Rebellion", our live weekly call-in talk show. Keith took a six week hiatus from the show as he went on a nationwide tour for Food Not Bombs. Very special thanks go out to Geoff McDonald and Nikki the Liberator of Radio Libre for filling in as guest hosts in his absence.

In keeping with our policy of bringing you the interesting and the un- usual, we feature in May a fifteen-part reading of the book, "Worlds in Colli- sion" by Immanuel Velikovsky. Food for the mind, you might call this one. Velikovsky, the original proponent of the theory of cosmic catastrophism, proposes that in the year 1500 BC, the Earth was struck by a giant comet, which went on to settle into an orbit around the sun as the planet Venus. The event triggered astounding catastrophes of nature which are ascertainable today in the geologic records of the Earth as well as the folklores of an- cient peoples, according to Velikovsky.

Despite the impressive body of evidence Velikovsky presents to support his thesis, "Worlds in Collision" was harshly and at times stridently rejected by the scientific establishment when it first appeared in 1950. Many of the nation's top scientists referred to Velikovsky as a charlatan and threatened to boycott his publishers. Yet many of Velikovsky's predictions, such as the existence of radio signals emanating from the planet Jupiter, have since been borne out, and the book is fabulously rich in the culture of ancient civili- zations, delving deeply into the secrets of Hindu, Babylonian, and Mayan astronomers. Moreover, Velikovsky's detractors found themselves sharply rebuked by no less than Albert Einstein, who maintained a correspondence with Velikovsky until his death

in 1955.
We're looking forward to seeing all of you at our Second Anniversary Party, May 11th at Cesar's Latin Palace. As of this writing, the Funky Nixons have been booked for this joint anniversary celebration for ourselves and Free Radio Berkeley, and it promises to be a festive occasion. Micropower radio is now two years old in the Bay Area! So don't forget--Cesar's Latin Palace, 3140 Mission St., Thursday May 11th at 9 pm. See you there! And when in west San Francisco, keep your radio tuned to 93.7 FM, San Francisco Liberation Radio.

Kits & Accessories From Free Radio Berkeley

First, a word from our legal department: For educational purposes only. These kits are offered for the furtherance of one's knowledge regarding radio frequency design and principles. At all times during operation the assembled unit must be connected to a dummy load. Part 15 of the FCC rules prohibits an antenna being used with these units. All responsibilities for the ultimate use of these kits are born solely by the builder and/or operator.

KITS AVAILABLE NOW !

All kits are complete and come with professionally manufactured, drilled and tinned PC boards. All coils are pre-wound. Each unit, unless specified, requires 12 volts for proper operation. Full instructions and diagrams included. Required tools include a 25-30 watt soldering iron with a fine tip, diagonal cutters, needle nose pliers, assorted screwdrivers and other small hand tools. Full assembly diagrams and instructions are included with each kit. Antenna construction diagrams are provided with each transmitter or amplifier order.
Certain kits are designed to work with each other. For those whose wish to boost the output of their Ramsey FM-10 the 1/2-1 watt amp will work very well for this purpose. The 30 watt amp is designed to be driven by 3-5 watts and works extremely well with the 5 watt transmitter. The 15 watt amplifier is designed to be driven to full power with about 1/2 watt of input power, hence it works very well with the 1/2 watt stereo transmitter or PLL transmitter. If you wish to only boost a 1/2 watt signal to 5-7 watts then choose the 6 watt amplifier kit. An amplifier only increases the output power of a given input signal, it can not produce an FM signal whereas a transmitter or an exciter creates the FM signal at a suitable power level for possible further amplification by an RF amplifier. 1/2-1 Watt PLL Transmitter - $105 Our newest kit. Full digital PLL control locks the frequency and prevents any drift from happening. Will easily drive the 6-8, 10-15, and 20-24 watt amplifier kits. Easy to assemble and a major improvement over the Panaxis PLL kit. If you have one of our 5 watt transmitter kits, they can be modified to be driven by the PLL transmitter. Full instructions are provided for this modification.

1/2 - 1 watt Stereo Broadcast Transmitter - $55

A vast improvement over the Ramsey FM-10. It uses the BA1404 IC as a stereo modulator only to modulate a FET vfo, buffer and amp chain. Better audio input filtering and bypassing. IC voltage regulation for the 2.5 volt supply for the BA1404. A very rugged output stage and collector voltage bypassing make this unit stand out from all other transmitter designs using the BA1404 chip. Requires 12 volts DC

5 Watt FM Transmitter - $65

This is a very good basic unit that is very compact, fits into a 4 x 6 inch enclosure (available punched and drilled). Frequency stability is maintained by a well designed oscillator section. It is a mono unit that accepts line level input (i.e. an audio signal from a tape deck, mixer, etc.). A fine frequency adjustment control allows for easy adjustment of operating frequency. To increase power of this transmitter use the 30 watt amplifier. Both will fit into a 7 x 7 inch enclosure (available punched and drilled). Requires 12 to 14 volts DC at 3/4 to 1 amp for operation.

6 watt RF Amplifier - $30

Uses the same output transistor as above. It is designed to boost low wattage transmitters to a bit higher output power and will produce up to 8 watts of output power. A very small and compact circuit measuring 3 x 1 1/2 inches for 1/2 watt input drive. Easy, quick assembly. Requires 12-14 volts DC at 3/4 to 1 amp for operation.

15 watt RF Amplifier - $55

Uses a very high gain (14dB, power gain of at least 25X) RF transistor to boost a 1/2 watt input to 15 watts. Perfect for boosting the 1/2 stereo transmitter to 15 watts. Measures 2 1/2 by 5 inches and fits into a 4 x 6 enclosure (available punched and drilled). Includes heat sink. Easy, point to point surface mount assembly. Requires 12-14 volts at 2 amps for operation.

20 -24 watt RF amplifier - $115

$115 might sound a bit steep, but for those who do not wish to do an extensive amount of soldering and tuning, this is kit is for you. It uses a broad band high gain, RF power module which will put out a 20-24 watt signal for only a 100 to 200 miliwatt input. Kit requires less than 20 solder connections to complete, including a 5 element filter. Since the module is broad band from 88 to 108 MHz no tuning is required, plug and play as they say. Requires 12-14 volts at 3 to 4 amps.

25-30 watt RF Amplifier - $65

Will produce full power with an input drive of 3-5 watts. This unit works very well with the 5 watt transmitter kit. In fact, next to the 5 watt kit, it is our most popular item. Fits a 4 x 6 inch enclosure (available punched and drilled). Easy point to point surface mount assembly. Includes heat sink. Requires 12-14 volts DC at 4-5 amps for operation.

30-40 Watt Amplifier - $95

30 to 40 watts of output power for an input of 1/2 watt. This is a two stage unit with a 5 watt and a 40 watt amplifier on the same board. Easy, large surface mount type assembly. Works very well with the PLL transmitter. Requires 6-7 amps at 12 volts DC.

1/2 to 1 watt Amplifier - $30

1/2 to 1 watt output for an input power of 10 mw. Great for boosting lower power VFOs and low power Ramsey FM-10 type kits. Very compact size, 3 1/2 X 1 1/2 inches. An optional transistor can be substituted to take the power up to 1 1/2 watts, add $5 for this option.

Output Filter Kit - $8.00

A seven element low pass filter, composed of 4 coils and 3 capacitors, to flatten those harmonics. Please use a filter on any transmitter you to use to avoid possible interference with other services.

15 Watt Dummy Load Kit - $10.00

Essential for tuning up and testing transmitters and amplifiers. Will handle 15 watts without any strain, higher powers for a briefer period of time (i.e. shut down when it gets rather hot). Presents a uniform 50 ohm impedance to the transmitter.

25 Watt Dummy Load Kit - $20

As above, use this with the 30 watt kit for testing and loading purposes. Uses a single, film non-inductive resistor

50 Watt Dummy Load Kit - $35

Same design as the 25 watt unit, use this if you plan on running the 30 watt unit for an extended period of time with a dummy load.

100 Watt Dummy Load Kit - $50

Same design as the 25 & 50 watt units. Uses 2 film resistors.

Stereo Generator Only - $30

Actually 1/2 of the above the stereo transmitter, will allow one to broadcast in stereo using the 5 watt transmitter with a very minor modification.

HIGH POWER AMPS - USE WITH CAUTION

75 Watt Amplifier - $200

Requires 28 volts DC (two car batteries in series or 28 volt DC power supply). Point to point surface mount construction. Easy assembly, includes heat sink. Amplifier measures 6 3/4 x 3 3/4 inches. Only 5 watts input power needed to drive to full power.

150 Watt Amplifier - $250

Requires 28 volts DC (two car batteries in series or 28 volt DC power supply). Point to point surface mount construction. Easy assembly, includes heat sink. Amplifier measures 6 3/4 x 3 3/4 inches. Use a power FET RF transistor that requires only 3-5 watts of input power for 125 watts output.

ANTENNA KITS

These are partial kits, just go to your local plumbing supply or hardware store for the copper pipe and/or wire needed for completion. Full construction diagrams and instructions included.

J-Pole - $25

Metal box drilled with SO239 connector, tuning cap and tubing clamps. This one is know as the "electricians special" since it uses mostly electric hardware in its construction. Works very well for urban areas. No soldering of copper pipe required for assembly. Can be adjusted for operation over the entire FM band.

Slim Jim - $20

SO239 connector and clamps. Works very well for urban areas where a powerful horizontal pattern is needed. If used at too great of height, an area surrounding the antenna will be skipped over due to its low angle of radiation. Even at a height of only about 12 feet mounted on a traffic sign pole this antenna was able send a 5 watt signal 2-3 miles. Requires soldering of copper pipe. Can be placed inside a 6" piece of black plastic pipe for concealment. Provides a gain of 2-3.

Dipole - $20

Easy and quick design.

5/8 Ground Plane - $35

All necessary parts except copper element and ground radials.
This is a great design and works extremely well. It is very portable and will boost the power by a factor of 2 to 4.

POWER SUPPLIES

Unless you are planning on operating from a 12 volt lead acid battery or from the lighter socket in a vehicle you will need an AC operated DC power supply. Wall adapter units can not be used. We have the following units available.

2.5 Amp 13.8 V DC power supply - $35

Use this to power either the 1/2 watt transmitter or 5 watt transmitter or the 1/2 watt stereo unit in combination with the 6 watt amplifier.

4.5 Amp 13.8 V DC power - $45

Use this to power the stereo transmitter in combination with the
15 watt amplifier.

12 Amp 13.8 V DC power supply - $75

Use this to power the 5 watt transmitter in combination with the
30 watt amplifier or the PLL with a 40 watt amplifier.

METERS

Power & SWR Meters
These are essential to the proper tuning and setting up of both transmitters and antennas. An antenna has to be fine tuned so that it accepts the full power of the transmitter and reflects the lowest amount possible back, that ratio of forward power to reflected power is know as the standing wave ratio (SWR). The various stages of both transmitters and amplifiers have adjustable capacitors which are used to tune the unit to the frequency of operation. A power meter allows you to see the effect of these adjustments on the power level and to set everything at an optimum level.

Economy Power/SWR meter - $35

A compact in-line unit that works up to a frequency range of 150 MHz.

High Quality Daiwa Meter - $100

A dual cross needle meter that shows both forward and reflected power on the same meter face. Makes tuning up very easy, no need to switch back and forth between these two functions. Compact design with 12 volt connection for lighting the meter face.

FREQUENCY COUNTER
To accurately maintain your operating frequency a digital frequency counter is highly recommended. A digital tuner with signal strength indication can be used as a substitute. We have a frequency counter available for $80.00

COAXIAL CABLES
A coaxial cable is a special type of wiring that has an inner conductor surrounded by an insulating plastic sheath which is covered by a braid of copper wire that is then covered by a plastic jacket. The 75 ohm video cable used in home TV applications is one type of coaxial cable. For most RF purposes, 50 ohm cable is used. Quite a number of 50 ohm coaxial cables are available ranging from the rather small to cables over 1" in diameter. Regardless of the type, all such cables exhibit a loss that increases with frequency of operation and the length of the cable. For most purposes we will concern ourselves with RG8 and RG8x (mini version of RG8). In very short runs RG58 can be used, but we prefer RG8x due to its lower loss and ability to stand a bit more abuse. RG8 has the lowest loss of the group. Under no circumstances should the cables be twisted, kinked or crushed, this will cause major problems. We supply both RG8X and RG8 in the following lengths. Each end is terminated with a PL259 plug. RG8X: 25 feet - $15, 50 feet - $25, 75 feet- $35, 100 feet -

$40 RG8: 50 feet - $32, 75 feet - $42, 100 feet - $52

ENCLOSURES

4 x 6 aluminum chassis punched and drilled for 5 watt xmtr, 15 watt amplifier or 30 watt amplifier - $20

7 x 7 aluminum chassis punched and drilled for 1/2 watt stereo transmitter or 5 & 30 combo or PLL 1/2 watt. - $25

The Brick Enclosure - 15 to 30 watt size -$35 / 40 watt size -$45
Combined heat sink and enclosure made from extruded aluminum. Will support a 1/2 or 5 watt transmitter and any of the booster amplifiers.

VARIOUS & SUNDRY ITEMS

Tweak stick - $2.50

Essential to tuning transmitters and amplifiers. Non-conductive body with tiny metal blade at end. In tuning these transmitters and amplifiers a metal screwdriver will cause false tuning to happen due to the interactive effects of the metal and the holder of the screwdriver with the circuit. A plastic TV tuning tool kit can be found at Radio Shack as well.

NEW ITEMS

1-5 Watt AM & SW Transmitter - $60

A well designed AM & SW transmitter which uses standard microprocessor crystals with a switichable 1-10 frequency divider. I.e. an 8 Mhz cyrstal yields frequencies of 4, 2.66, 2, 1.6, 1.33, 1.14, 1, 8.8, .8 Mhz. Specific frequency crystals can be ordered from various sources. Supplied with 8, 6 and 4 Mhz crystals. Ouput power is adjustable from 0 to 5 watts.

25 watt AM & SW amplifier kit - $55

Broadband up to 10 Mhz. Requires only 2 watts of drive power for 25 watts out. Needs 28 volts DC for operation.

150 watt AM & SW amplifier kit - $275

Broadband to 30 Mhz. Requires 5 watts of drive power. Requires 12-14 volts at 18-20 amps.

Proceeds from the sales of these kits go to the furtherance of micro power broadcasting, bringing a voice of empowerment to every community.

Please add $6.00 for handling and shipping for each kit. $6.00 for the 2.5 & 4.5 amp power supply and $15.00 for the 12 amp power supply. Normal shipment is UPS 3 day select. COD orders add $8.00. Air mail to other countries, $12.00 per kit.

Payment to be made out to Free Radio Berkeley Foreign orders please pay by money order drawn on US bank Free Radio Berkeley 1442 A Walnut St., #406 Berkeley, CA 94709 Voice mail: (510) 464-3041 Net mail: frbspd@crl.com

2. Chicago Radio Watch: 5-27-95

Newsgroup: rec.radio.broadcasting
Date: 1995-06-01 00:00:00 UTC
From: JJB92@aol.com
Message-ID: <3qld7u$7fq@vixen.cso.uiuc.edu>
Source record: 31602

Money talk......

Duncan's Radio Guide recently released billing figures for radio stations in Chicago. Following are the results for the top ten stations for Chicago:

WGN (talk) $37.1 million
WUSN (country) $22.5
WLUP (entertain talk) $19.4
WMAQ (news/sports) $19
WGCI (AM/FM:urban/oldies) $18.9
WBBM-AM (news) $16.6
WLIT (easy listening) $13.8
WJMK (oldies) $13
WVAZ (urban) $12.6
WBBM-FM (top 40/dance) $12.2
WCKG (classic rock) $12.1
WKQX (alternative rock) $12
WNUA (smooth jazz) $11.3

Comings and goings:

Ed Schwartz, who only recently returned to the airwaves on WLUP-FM (97.9) after stints at WIND-AM (560) and WGN-AM (720), has parted ways with the station. Eddie, who battled a series of health problems over the past 2 years, reported the split was amicable.

The station will replace Eddie by extending the show of Bill Leff and Wendy Snyder to 3am and playing "Bits of Bonaduce" from 3-5 am. The station hopes to replace "bits" with live programming in the future.

Dan Bernstein, voice of the Rockford minor league baseball team and Rockford's CBA basketball team has landed with WSCR as a reporter/anchor. Also at WSCR, producer Lonnie Lavine is leaving the station to pursue other interests.

Debbie Alexander, former jock at WCKG, has landed in St. Louis at WVRV-FM.

Is the time slot cursed?

Exhibit: WKQX
Time slot: Morning drive

Heidi Hess, who has been with the station about six months handling the morning news, has left the station. No replacement has been named.

The change continues a Q 101 tradition of rapidly changing morning hosts. For those of you keeping score at home, the station has gone from Robert Murphy and Dave McBride (news) to Mark Goodman and Brian Peck to Bobby

Skafish and Carla Leonardo to Robert Chase and Heidi Hess since the station changed to the "New Rock Alternative" format. Who will be the next victim?

Do as I say, not as I do award:

Bill Gamle, GM at Q 101, will be performing consulting duties for stations in Detroit, Minneapolis, Milwaukee, Fresno, and Modesto which would like to duplicate Q 101s success. Bill was quoted as telling his new found friends "Not to be fearful to take risks".

The stations playlist does for "alternative" radio what WCKG does for classic rock. Plays the same songs over and over and over and over.............

4. New England Radio Watcher: WEEI, Doings in NH, etc.

Newsgroup: rec.radio.broadcasting
Date: 1995-06-01 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3qld8a$7g6@vixen.cso.uiuc.edu>
Source record: 31604

This week, this will also serve as the Boston Radio Watch, since Mark Shneyder is off in Southern California (lucky...)

*WEEI (850, sports, 50kw) has named a new program director -- and after weeks of rumors of veterans of WFAN or ESPN Radio coming up here, they ended up hiring in-house! Glenn Ordway has been a p-b-p announcer and talk host with 'EEI since the 590 days, and now he's running the show. 'EEI's Eddie Andelman did a live show last week from the Strand Theater in Dorchester, with the topic "Racism in Boston Sports." Former 'EEI talker Jimmy Myers, who loudly complained about racism when he was fired a few years back, was invited but declined to attend. The audience was VERY small -- reportedly just 20 or so.

*WCLB (105.7, country) has had an interesting Sunday night show running for a few weeks - "Edge of Country." It's what would happen if a country playlist collided with a AAA playlist - lots of Mary-Chapin Carpenter and the like. Interesting format.

*A veteran WBZ newsman has retired. Darrell Gould left WBZ this month after almost 30 years with the station, and close to four decades in New England radio. Darrell was statehouse correspondent for BZ for many years, and had recently been doing the evening news shift, which is now being filled on a rotating basis by part-timers.

*If you enjoyed hearing BZ's Gary LaPierre filling in for Paul Harvey earlier this month -- you'll get another chance to hear him this Thursday (June 1). And this time (modesty off) I'm writing for him. So if you don't like what you hear on the Harvey show this Thursday -- you know who to blame :-)

*New England's tallest mountain is about to get a fourth broadcaster up top. Mount Washington is already home to Poland Spring, Maine-licensed WMTW-TV 8, Mount Washington-licensed WHOM-FM 94.9, and Berlin, NH-licensed WZPK-FM 103.7 "The Peak." Now the CP for WZJN-99.5 Jackson NH is being changed from 550 watts @ 771' AAT to 46 watts -- at 3746' AAT! Should be interesting to see how far 46 watts gets out from up there.

*Imus has moved in the NH seacoast market - from WZNN 930 Rochester to sister station "Mix 96.7," which changed its calls from WWEM to WSRI, "Soft Rock and Imus." WZNN now shares a standards show in the morning with sister WMYF 1540 Exeter, then breaks away to satellite AM Only after AM drive. WMYF runs Stardust, but WZNN was not able to simulcast because

its signal overlaps with Stardust affil WASR 1420 Wolfeboro NH. After Imus, WSRI has a AAA-modern rock format.

*Radio Equity Partners has closed its purchase of WWRX-FM 103.7 (classic rock) Westerly-Providence RI from Bear Broadcasting. R.E.P. already owns WWBB-FM 101.5 (B101, oldies) in Providence. Bear keeps WHIM(AM) (1110, country) in E. Providence, along with WERI(AM) (1230, ac) in Westerly, and a CP for WUAE-FM 99.7 in Wakefield RI. Every high-power FM in Providence is now duopolized, except for WBRU-FM 95.5, which is affiliated with Brown University:

Tele-Media: WPRO-FM 92.3, WWLI-FM 105.1, plus WPRO-630 and WLKW-790
R.E.P.: WWBB-FM 101.5, WWRX-FM 103.7
Liberty: WSNE-FM 93.3, WHJY-FM 94.1, plus WHJJ-920

The only other major players in the market are New Bedford-licensed WCTK-FM 98.1 and Woonsocket-licensed CHR WWKX "Kix 106.3," which is a class A.

*Also in the Providence market - the other shoe has dropped in the affiliation swap that's coming in a few months. WPRI-TV 12, now an ABC affiliate, is being sold by Narragansett Broadcasting to CBS. And now CBS affiliate WLNE-TV 6 (New Bedford-Providence) is changing to ABC. WLNE will reportedly go stereo at long last when it becomes an ABC affiliate. No word on whether WLNE's Providence translator on channel 48 will also pick up stereo.

*Now that WNLC-1510 in New London, CT has become part of a four-station combo (with WTYD-100.9 New London and WICH-1310/ WCTY-97.7 Norwich), WNLC's format has flipped from CNN headline news to standards. The signal is still awful - it's directional to the south to protect WNRB in Boston, and there's not much to the south of New London except fish (and the tip of Long Island).

-=Scott Fybush - fybush@world.std.com=-

Steve, tell Mike I said hi. The Telethon to raise money for the Johns Hopkins Childrens Center is comming up and Mike will not be with us this year. Mike was the spirit behind the telethon with his annual marathon broadcasts for four days straight. It's not important who's on mornings at WWMX (JO JO and somebody),
It's the fact the a market that was known for it's many radio personalities is now left with very few and the rest are only allowed to read liner cards and not develop their potential. But then again radio is for.....ad agencies. Not listeners.

Missing you Man!!

Dunno where he is, but I just saw this:

NEW YORK (Reuter) - Irwin "Sonny" Bloch, one of the nation's
longest-running financial radio talk show hosts, was accused by the
Securities Exchange Commission Thursday of fraudulently selling securities
in three radio stations.
The SEC also alleged that Bloch used more than $1 million of the $3.8
million raised from the sales to buy real estate and funnel funds into
family accounts.
A federal judge issued an order freezing Bloch's assets, the SEC said.
Bloch also was expected to be named in related criminal charges filed in
Newark, N.J., later Thursday, judicial sources said.
The SEC alleged that from August 1994 through early 1995 Bloch sold
unregisterd securities in the form of "membership interests" in radio
stations WBDN-AM in Clearwater, Fla., WGGG-AM in Gainesville, Fla., and
WCNX-AM in Middlesex County, Conn.
Those stations were also named as defendants in the SEC case, as well
as Broadcast Radio Group, Inc., which is owned by Bloch and his son Paul.
Other defendants are Bloch's wife, Hilda, and Cabrera Broadcast, a
Florida corporation controlled by Mrs. Bloch, and Independent Broadcasters
Network Inc., which distributes Bloch's radio programs.
The SEC alleged that Bloch, on his daily financial radio talk show,
"The Sonny Bloch Show," offered listeners the opportunity to purchase
memberships in the three stations. The show was broadcast on about 200
radio stations throughout the United States.
The memberships were not registered with the SEC and the commission
alleged that the offering materials were false and misleading. They
contained inflated projections of the value of the investment, the SEC
said.
The suit asks the court to order the defendants to repay all investor
funds that had been unlawfully diverted, along with interest.

: carrying the program and at what time?

Not many and not for long.

Sonny was arrested Friday, 5/26, in the city of Santiago in the
Dominican Republic, according to a UPI Wire Report that cites the
Listin Diario newspaper in Santo Domingo.

Bloch was, as most should know, indicted Thursday by a New Jersey
grand jury on charges of fraud related to using his broadcasts to
promote fradulent wireless cable schemes. The SEC has also filed
a complaint in Federal court related to his selling of
unregistered securities in the form of "membership interests" in
"Limited Liability Companies" that bought three radio stations;
WBDN, Brandon FL; WGGG, Gainesville FL; and WCNX, Middletown CT.
A fourth station in the scheme was not mentioned in the charge
(KLXR, Redding CA), and I suspect it is because one of the major
holders in that particular property is or was DeAngelis Holdings,
who was the focus of the NBC Dateline piece that started Sonny's
empire crumbling.

Reply-To: paulkeys@aol.com (PAUL KEYS)

I have several Collins 208U-3 3-Kw 2-30Mhz RF Linier Amplifiers
that were recently removed from a USAF station here in California..

They were well maintained since installation in 1975 and are in excellent
condition. They could be used for radio amateur or commercial service.

They require only 0.2-watts to produce 3-Kw pep or average output. A
4CX3000A tube is used in the final stage. The primary power needed is 200
to
250v 3PH 47-60Hz.

These are automatically tuned with a servo system that takes about 10
seconds
to change frequency.

I can supply these superb units fully tested with manuals and guaranteed
ready to install at $7500.00 crated price FOB California.

Please contact me for more details .

I don't know this for sure, but I'm guessing Max's contract was up with the station & they chose not to renew it. I'm surprised by the move, too, but as McCoy says, Nite's someone they wanted full-time for awhile. He's still got a huge following.

I think this is a big mistake by McCoy. Should have made adjustments from the other end of the day and kept Max. Also, I like Bobby J in his current slot, esp on Fridays when he does Friday Night 50's. A lot of the other deejays on this station are rather flat and I thought Max was more lively, esp with the callers.

Years ago I got some inside news that Kinkel was doing all sorts of things on the air that McCoy did not approve of. Half of what he does on the phone and the time he takes up doing it has been rubbing McCoy wrong for a long time. He's had his kids up on numerous occasions and one night they screwed around with the backup studio board. McCoy blew his stack when he found out and everyone else was pretty upset at him too.

A lot of his regular routeens have become stale, like playing Ethyl Merman singing "We're In The Money" every time he does the Lottery results and his Claude Fanork, the producer bit is also dumb.

The only thing that's saved Kinkel has been his numbers or he would have been dumped a long time ago.

This could all backfire on McCoy, most people now know that Norm N. Nite is not really cracked up to what his reputation is.

Wow what a bunch of gobbledegook! An engineers dream maybe but those three files, to me, were worthless.

What we need is a simple list of stations in this country. Organized by state maybe, by frequency, by power.... I don't know. I can only presume that the FCC knows who is on the air and who isn't.

Mike - I remember promo literature from WBRY in 1964 saying it was the
first experimental am hi-fi in the country. I wrote a posting yesterday,
but got the experimental calls wrong. Thanks for correcting me. When
I was in high school, WBRY gm Bob Holtzer told me the station's transmitter
in 1934 was in Prospect between Waterbury and New Haven, and that WBRY had
studios in both cities but the FCC later ruled the station must serve only
Waterbury.

18. AM High-Fidelity Stations (was Pioneer Station W9XBY)

Newsgroup: rec.radio.broadcasting
Date: 1995-06-01 00:00:00 UTC
From: jeff560@aol.com
Message-ID: <3qldbl$7kv@vixen.cso.uiuc.edu>
Source record: 31618

Reply-To: jeff560@aol.com (Jeff560)

mrobert2@mail.coin.missouri.edu (Mark Roberts) described W9XBY...

>W9XBY was one of four high-fidelity AM stations in the United States
>operating between 1500 and 1600 kHz from 1934 to 1941. These

mikedow@gate.net (Mike Dowling) described W1XBS...

>My father tells me that W1XBS in Waterbury, Connecticut was the
>first hi-fi experimental station of it's kind. The dial position
>was 1590.

Bill Dillane <72674.2151@CompuServe.COM> described presumably the
same station...

>One of those experimental AM hi-fi stations in the 30's was W1BRS at
>1530 in Waterbury/New Haven CT. The tower was located half way

Just to add a little to this discussion, information I have is that
1530, 1550, and 1570 were allocated for experimental operation in
1934. The 1936 list of radio stations in Tom Kneitel's Radio Station
Treasury shows four stations, which I presume were the only such
stations that ever existed:

1530 W1XBS Waterbury CT
American Republican, Inc, 136 Grand St

1530 W9XBY Kansas City MO
106 W 14th St

1550 W2XR Long Island City NY
Scientific Broadcasting Service, 41 Park Row, NY

1550 W6XAI Bakersfield CA
Pioneer Mercantile Co.

All four were listed as 1000 watts.

The two survivors, both on 1560, are W2XR which became WQXR (WQEW)
and W6XAI which became KPMC (KNZR).

Incidentally, the same 1936 listing shows remote pickup transmitters
on 1566 and police and fire transmissions starting at 1570.

I'm not surprised that you had fond memories of Morris Levy. Many who knew him have nothing but praise for him. Much of his power arose not from Strawberries but from his ownership of Roulette Records and it's many divisions, which were responsible for many of the hit records of the late 50's and early 60's.

One of the more troubling aspects of his reign at Roulette was his practice of putting his name on the songwriting credit of records that he released. This had the effect of keeping the real songwriters (the artists) from collecting their full share of royalties. This was one of the reasons that two ex-members of the Teenagers (as in Frankie Lymon and the Teenagers) were able to successfully sue Levy over the rights to the songwrting royalties from the song "Why Do Fools Fall in Love".

For more details about Levy in the Roulette years, check out the book by Dorothy Wade and Justine Picarde entitled "Music Man". It was published about five years ago and is still available in libraries (although I doubt it's still in print). Although the book is a biography of Amit Ertegun, the co-founder and owner of Atlantic Records, a substantial portion deals with Levy (despite the fact that he had few, if any, connections with Ertegun).

Don't know if this is the most cost-effective way to do a music format change, but here's how WOW, Omaha went from rock to country in the early 1980's.
Meredith Publishing still owned 590 AM, and since its sale wasn't too far in the future, the music format change was to be done on the quiet. The company gave a blank check (no doubt with SOME limitations) to a small gang of station management types who went to (help me here, veterans) Kansas City, I think.
In a record store there, WOW's production director Ralph Caldwell, a meek little fellow about 5-foot-nothing, sauntered in with a big cowboy hat on and told the clerks he was a rich Texan who REALLY liked country music. He left with a few thousand dollars worth of records, and with the clerks still staring.

It's best to use a production music library. They are better than ever and many can be acquired quite easily and at low cost. Buy out libraries are even better than they ever were in the past. Production Garden in San Antonio and the Music Bakery have very good music that could fit most formats and at very low cost.

Many production libraries are available to schools and universities at an educational rate. I know one of the big ones we use at Q95, Network, has an educational rate and Lawrence Tech here uses it in their AV department for television production.

Hi Brian...I was working in Orlando as recently as a few months ago. The radio scene is as follows:

Urban...102JAMZ...101.9...an ok urban, leans a bit rap heavy.
CHurban...XL106.7...what you'd expect
Hot AC...MIX105.1...what you'd expect
Rhythmic AC...Star 94.5...using the "Rhythm & Romance" format.
Country ....K92FM...heritage country in the market
NAC/Jazz...WLOQ 103.1...typical NAC/Jazz sound
Hot Talk...Real Radio 104.1...stern in the morning, local middays and PM drive...syndicated Passion Phones with Erin Sommers from Miami.
Lite AC...Magic 107.7...typical lite ac
Rock...WDIZ 100.3...heritage rock station in market
New Rock...WJRR...101.1
AAA (for lack of a better definition) WMMO...98.7
Classic Rock...WHTQ 96.5...
News/Talk...WDBO...580AM
News/Talk...WNZZ...740AM ?
Radio Aaahhs...950AM (kids programming)

Those are the major players that come to mind off the top of my head. You'll also get Tampa and a Daytona signal or two...and a couple of stations from Ocala and Cocoa. Enjoy your trip!

Ed LaComb

27. Free passes for DJs, Music Directors

Reply-To: paisleypub@aol.com (Paisleypub)

Any DJs interested in attending (see below) contact Vicky at
paisleypub@aol.com or call (703)684-0723 for free passes.

Any radio station personnel interested in attending The Loca lMusic
Summit, (see below), please contact Vicky Hendley at paisleypub@aol.com or
call (703)684-0723 for free passes.
Local Music Summit in DC
The Local Music Summit, presented by The Local Music Store Distribution
Network, Inc., has slashed registration fees in half! Registration is
only $50 for the weekend- long 2nd Annual LMS Seminar and Showcase. The
event will be held June 9, 10, and 11, 1995, at the Washington Project for
the Arts' Central Armature Works building, located at 625 D St., NW,
Washington, DC.

The Local Music Summit will feature two days of educational sessions and
two
evenings of music. The daytime panels and teaching sessions will feature
representatives from record companies, manufacturers, radio, publicity,
and other
areas sharing their insight to give musicians the information they need to
succeed in the music business.

Confirmed and tentative panelists include representatives from ASCAP,
SESAC, BMI, Island, QBQ, Airshow, Tower Records, Kemp Mill Records, Oasis
Recording, Cellar Door Entertainment, IMP, Lava/Atlantic Records, Columbia
Records, Interscope Records, Geffen, Epic Records, Sony Music, Musician
Magazine, Discmakers, Merkin Records/Oz Studios, and more. Also speaking
will be managers, attorneys, tax experts, artists, booking agents, and
more. (Confirmation of panelists is underway and are subject to change.)

The Summit also plans to tackle important issues facing the industry. A
panel
discussion on the controversial "Fairness in Musical Licensing Act,"
currently before Congress, is scheduled Sunday, June 11. The legislation
proposes major changes to the current artist royalty collection system.

Daytime and evening showcases will provide a forum for artists to display
their talent to a broad audience, including record company reps and
Jagermeister reps looking for five artists to offer Jagermeister
sponsorship.

Back before computerized music logs, we had to chart every song we played during the ASCAP check-up week, logging by hand each song we played and the composer (remember peering at the fine print on those record labels?) We were told the license fee would be based on how often we played the songs in our playlist, and some complicated combination of audits of the station's books to see how much we made from broadcasting the music combination.
So: if your sponsor is bound and determined to use Axel's Theme or a bridge from his/her favorite current song (isn't Rush's intro music from a pop song?) why couldn't you just log the whole song as if it's being played through, for the licensing log?

I'm sure that I can't be the only person in the world interested in
this stuff so I am in the process of creating an RDS WWW home page ie
The RDS Applications and Technology Home Page at
http://www.dungeon.com/~start/rds.html.

If you have any information, pictures etc that you think would be
suitable for such a home page please e-mail them to me, I would be
delighted to include them.

Bye for now

Simon

Noted your articly this evening and some of the thoughts regarding Real Audio being
a threat to radio broadcast.

In my opinion, real time audio will only be a threat to us in radio if a majority of our
listeners end up
listening to the radio on the computer. This isn't the case yet.

We tend to forget that radio biggest strength as a medium is the fact that it is the most
portable of all medium and it's wireless. Although there is much work to be done on the
digital radio
side of things before we can fully utilize our signal spectrum. It will take far longer for
someone to
send Internet bandwidth across our transmitters.

Real Audio and Real Video when it comes will be very useful and unique for cyber surfers sitting down at
their computer at home. When they are driving their car to work or school. They still have to listen to the
radio not laptop while they are driving.

Just a few of my thoughts.

PS. I will be coming in to Seattle to visit some of the stations and would be interested in knowing what
type of "Cutting edge" things you are doing and possible visiting your company. Let me know if OK.

Me and some of my colleagues from the Fraser Valley Radio Group are planning some tours of stations
on June 21 and 22nd. We want to see what is new. What is cutting edge. We also want to see some Internet
applications being used at radio stations. We are interested in both the programming and marketing side
of the business.

If you think we should plan a visit to your station let me know. I am putting together our schedule in the next week.

We have four radio stations. One is Easy Hits FM, another Good time Rock and Roll, the others are
MOR. If you want to network, share ideas, etc. let me know before June 15th. We will probably overnight
on the 21st.

IS>to see something nice and clean and smooth that will allow at least
IS>twice as many stations in this city...with the way format
IS>fragmentation is going, we're definitely going to need more
IS>stations soon! It would be nice to have, maybe a station on
IS>*every* frequency, *everywhere* you go!!

IS>Ehhh, I'm dreamin'!

Darius,
You sure are! The stations in operation now have a hard time making
ends meet. There are already more stations than the advertising market
can support. How will the market bear twice as many stations? Also, the
existing stations serve such a small fraction of the total population
that the #1 station with a 5 share will drop well below saleable numbers
when audiences are further fractionalized.

Someone has to pay to operate these new stations.

Rich

33. Question about Tascam 122MKII Cassette Deck

Newsgroup: rec.radio.broadcasting
Date: 1995-06-01 00:00:00 UTC
From: robert573@dallas.relay.ucm.org
Message-ID: <3qldf4$7qu@vixen.cso.uiuc.edu>
Source record: 31633

I am working p/t with a radio station that has a couple of these cassette decks, plus I also have one in my home studio. On one of the decks at the station, we have a problem of where even though the pitch control is turned off, the deck runs way too slow. Tapes recorded in this deck sound like "chipmunks" in other decks.

On my deck at home, I have noticed that when recording a 10 kHz tone for tape bias adjustments, the left channel has some waviness in the levels, but the signal is steady in the right channel. I have cleaned and demaged the deck, and I still see this same problem. I even get a more sever case of this problem when using TDK SA-X C-60 Chrome type II tapes. In fact those tapes are so bad/good, that it's literally impossible to callibrate the left channel on the deck to that tape brand. C-90's of the same brand are less problematic I'm not seeing this problem on our decks at the station, however.

Both decks at the radio station, and my deck at home, are only a couple of years old. Mine has had very little use, but I can't remember if this problem was already there when I bought it or if it creeped in later.

Is anyone else out there having any problems with this tape deck? If so, what kinds of problems?

Thanks
Rob Bass

If Dan can't help, try ARMSTRONG TRANSMITTER CORP near Syracuse, NY.
They're listed (advertised) in almost every edition of Radio World. A
friend of mine (Dave Rozac in Beacon, NY) was able to rebuild his RCA FM
from their stock *very* reasonably (translation: cheap).

Also, give Ken Dillard a call at WNOR in Norfold, VA. He works for my
company. We've got two RCA BTF-20E's on the air in "aux" service there. He
may be able to help you out from our spares stock if the need is
immediate.

Source record: 31638

Bill,
Rec'd your e-mail, and thanks. WTHT-AM studios and transmitter were located in the American Industrial Building, 983 Main Street (across from theG.Fox store) from August 1936 to December 1945 when the stations moved to 555 Asylem Avenue,. WTHT went silent Feb. 13, 1954 and the studios were converted for television. Channel 18 first came on as WGTH-TV around August or September 1954.
WTHT was originally 100 watts daytime until August 1937. The antenna was one tower when it was on Main Street. I don't know for certain but I believe a new one-tower structure was erected on the 555 Asylum location.

The station went fulltime in August 1937 and sometime later got permission to raise power to 250 watts day, 100 watts night and ulimately 250 watts full- time. To the best of my knowledge, RCA transmitting equipment was used all the time WTHT was on the air.
Thanks again for your note and if you (or anyone) gets more information on WTHT, please pass it along.

>WWCO was alway on 1240. The station went on the air in 1946 with
>only 240 watts. I don't know where WTHT 1230 was located in Hartford, but
>both cities are far enough apart for the 2 stations to exist at that time.

Somehow I remember hearing that WATR was at 1240 and things moved around. I was under the impression that WWCO went on the air in 1947 with studios in the Mattatuch Museum. I could be wrong on this.

>Somebody asked me about WBIB-FM and WELI-FM in New Haven. He said both
>stations merged to become one. I don't know anything about the stations,
>but a 1957 New Haven phone book lists a "WBIB Building Barber Shop".
>Until I saw that book, I had never heard of WBIB.

Whe nI worked for WELI I was told that another station was absorbed by WELI in the late fifties. There was a very interesting story that went with it...but like my hairline, it's just a faded memory.

Hey dudes,

My name is Simon Steele and I"m the DJ Manager at the Bond University
Radio Station on the Gold Coast, QLD. At this present time, we only
transmit to our university campus through the television cabling system
but we really want to become a local radio station - a Community FM station.

Is there anyone that has details as to what it would cost us to do this?
Prices such as setting up (dishes, relay antennas whatever) and then
licensing fees (if there are any for a community radio station).

Thanking you,

Simon Steele
DJ Manager - 4BUR

Message-ID: <3qr6dp$mm1@vixen.cso.uiuc.edu>
Source record: 31500

KSLX (100.7) FM, Phoenix says it fired night jock Carol Springer because she rigged the "Thousand Dollar Song of the Day" contest.

Springer was released by the station last month. Newspaper reports quoted operations manager John Sebastian as saying only that it was for something "very, very serious" and that he could not comment further.

Today's comment was given exclusively to KTVK television by KSLX general manager David Pugh, who would not comment on the record about why or how the contest was allegedly rigged.

He would say that the station stopped payment on the winner check immediately after learning about the alleged rigging.

I've heard a rumor that the FCC will no longer conduct random inspections of radio broadcast stations; they will only inspect if they receive a complaint.

The rumor goes on to say that the FCC intends to charge for investigations of RFI complaints. If a party is found to be in violation of the rules, he gets the bill; if everybody is found to be in compliance, the person complaining about the RFI gets the bill.

Anybody know anything about this?

Rob Landry

The real work will also include correcting what's in there! A number
of those entries are incorrect (stations that have changed call letters
show as having the old ones; stations listed as new are on the air).

You would think the agency that keeps track of all that would have a
database that reflects that...

From: Greg Weston <gregwest@delphi.com>
Message-ID: <3qr6e4$mnl@vixen.cso.uiuc.edu>
Source record: 31509

Hello all:

My name is Gregory Weston, and for the last 9 months I have been program
director of an AM station in a mid-sized Southern market. I inherited a
n unpopluar, unrated news/talk station and have transformed it into a growing
sports station. However, due to family reasons I am looking to move to
Pittsburgh, or as close to it as possible.
As Program Director, and Assistant PD before that, my responsibilities have
included hosting and producing a sports-talk show, a full service morning show,
and a thirty-minute weekly public affairs show, as well as supervising a staff,
lining up programming, being in charge of production, and basically everything
else that's needed to be done at an AM news/talker or sports station.

As for my bio, I am a graduate of Northwestern University, with a B.S. in
Speecjh
degree, originally hail from New York city, and am the biggest hockey fan in the
deep South- and probably the USA.

I seek any position involving either programming, on-air, or producer's
responsibilites
in the Pittsburgh area. I also do free-lance copywriting and, occasionally,
voice-overs.

A resume, tape, and references are available upon request.

Thank you for your consideration,

Greg

I'm wondering if anyone out there is connected with producing a syndicated music program (such as "American Top Forty", where the primary material is recorded music)-- do you have to pay licensing fees to ASCAP/BMI or is that paid by the station that broadcasts your show? Or, do ASCAP/BMI collect from both?

Please, only reply if you are connected with a show and know for sure -- I haven't been able to get a straight answer from anyone who works for a radio station on the receiving end of a syndicated program.

Many thanks!

I HAVE NOT HAD THE OPPORTUNITY TO "HEAR" ANY AUDIO SENT WITH THIS TECHNOLOGY,SO I CAN'T ADDRESS THAT ASPECT OF THE QUESTION. HOWEVER, WHEN THE PEOPLE FROM PRODIGY WERE TALKING WITH OUR FORMER P.D. AT WWRC-AM IN WASHINGTON D.C., I WAS INVITED IN TO OGLE THE NIFTY NEW BUTTON ON PRODIGY WITH OUR LOGO. BEING THE NOSY ENGINEER TYPE THAT I AM,I ASKED THE OBVIOUS QUESTION " WHERE DO I HOOK MY AUDIO PAIR TO FEED THE INTERNET?". THE ANSWER WAS THAT AFTER RECEIVING THE SOFTWARE FROM THEM WE WOULD MERELY REQUIRE A SERVER THAT WOULD SPAN THE WALL OF THE P.D.'S OFFICE (ABOUT 12 FEET) AND NEED A T-3 (T-3 !!!) SERVICE INSTALLED. I DON'T KNOW ABOUT YOU,BUT THAT SEEMS TO BE ALOT OF BANDWIDTH JUST TO REINVENT THE AM BROADCAST WHEEL.

robert573@dallas.relay.ucm.org says...

>even though the pitch control is turned off, the deck runs way
>too slow. Tapes recorded in this deck sound like "chipmunks"
>in other decks.
>
You should probably try to get ahold of the shop manual for that deck, since you have three of them. I don't have any, but I do know that most variable-speed machines and some that aren't, have DC servomotors for capstan drives. Somewhere close to the motor, or where the motor wires are attached to the PC board, will be a pot that will allow adjustment of the speed calibration.

>On my deck at home, I have noticed that when recording a 10 kHz
>tone for tape bias adjustments, the left channel has some
>waviness in the levels, but the signal is steady in the right
>channel. I have cleaned and demaged the deck, and I still see
>this same problem. I even get a more sever case of this problem

>so bad/good, that it's literally impossible to callibrate the left
>channel on the deck to that tape brand. C-90's of the same brand
>are less problematic I'm not seeing this problem on our decks at
>the station, however.

This problem sounds like a head height or tape guide adjustment. What is happening is the tape is being forced sideways slightly in relation to the other guides because the head has a piece of metal clamped around it to act as a magnetic shield in playback, and a tape guide. Tape being a flat ribbon, when this happens the tape will pucker slightly on one edge as it goes over the head, causing the phenomenon you describe. A C-90 does it less than a C-60 because the tape is thinner and will stretch slightly more, mitigating the effect slightly. I'll bet that if you put a C-120 in that deck, it will do it even less. Adjust the head height and then re-align the head and that should do it.

Hey there,
I'm looking for tapes from WBCN-Boston, preferably of Mark Parenteau.
If anyone has a recent aircheck from his show, please e-mail me and we can
work out something.
[I'd really like to get his Wednesday, May 31st show . . . I heard it
and it was yet another classic--wish I could have taped it! :)]

Thanks,
Scott

Hello all!

I'm Mark Byrd, Operations and Jack of all trades at WCRW 1240 AM here in Chicago.

We've been on the air since June of 1924.

I also do work with 16" trnscription discs, using a Western Electric 9A Reproducer through a KS 13386 Equalizer and then through whatever machines I need to give it that crisp clean "just Broadcast Live" sound that is so hard to come by.

I'm looking forward to learning anything I can on this NewsGroup and hoping that I just might know a thing or two that I can submit f perusal.

My Email address is at the beginning of the post and our Station Address is:
(Mark Byrd)
WCRW 1240 AM Radio Station
5625 North Milwaukee Avenue
Chicago, Illinois 60646-6281
Ph: 312.763.8250

Good Broadcasting and Revenues to you!

[Moderator's Note: Mark didnt mention that WCRW is in one of the last share-time deals in existance. 1240 is split three ways in Chicago. Bill]

63. PHOENIX WINTER BOOK RECALLED

Newsgroup: rec.radio.broadcasting
Date: 1995-06-04 00:00:00 UTC
From: Michael Hagerty <Michael_Hagerty@azfamily.com>
Message-ID: <3qr6en$mpd@vixen.cso.uiuc.edu>
Source record: 31522

Arbitron has notified its Phoenix subscribers that two Winter '95 diaries may have been filled out by people other than those they were sent to. The Winter book is being re-calculated with new numbers expected by June 9. Originally, Aribtron said the problem would not affect the scheduled release Friday (June 2) of the May Arbitrend, but PD's were called in late morning and told the trends would be delayed, possibly becoming available Monday.

The daily newsfax "Inside Radio" says "some in the market are muttering about diary tampering.

Some are also speculating that the diary situation may be related to KSLX's firing last month of night jock Carol Springer. KSLX general manager David Pugh told KTVK television Friday that "Carol was fired for rigging the Thousand Dollar Song Of The Day Contest . KSLX was unaware of any diary irregulaties when it released Carol. KSLX is investigating independent of the Arbitron investigation. No current employee of KSLX was involved in any way in tampering with Arbitron Diaries."

Springer's attorney says neither he nor his client have any comment.

Springer is now 7PM-12Midnight at crosstown AOR KDKB(93.3). KDKB General Manager Chuck Artigue told KTVK-TV he has no knowledge of any situation involving Carol.

Rush's intro music is from "My City Was Gone" by the Pretenders...
pretty ironic since if Rush has his way soon the whole countryside
will be gone...paved over, if you know what I mean.

65. Harrisburg, PA Ratings

Newsgroup: rec.radio.broadcasting
Date: 1995-06-04 00:00:00 UTC
From: Halem@aol.com
Message-ID: <3qr6df$mkd@vixen.cso.uiuc.edu>
Source record: 31641

Winter 1995 Harrisburg, PA Arbitron Ratings:

No.	Calls	Slogan	Format	Share	Notes
1.	WNNK (FM)	Wink 104	Top 40	13.7	
2.	WRKZ (FM)	Z-107	Country	9.1	
3.	WHP (AM)		Talk/News/Sports	8.2	
4.	WTPA (FM)		AOR	7.9	
5.	WRVV (FM)	The River	Classic Rock/AOR/AC	7.4	
6.	WWKL (FM)	Kool 94.9	Oldies	4.9	
7.	WHYL (AM)		Big Band/50's/60's	4.5	A
8.	WROZ (FM)	The Rose	Light AC	4.2	B
9.	WHYL (FM)	Country 102	Country	3.3	A
10.	WCTX (FM)		Easy Listening	3.0	C
11.	WYMJ (FM)	Mix 99.3 FM	Urban/R&B/Rap	2.7	D,E

NOTES:
A: From Carlise, PA
B: From Lancaster, PA
C: From Palmyra/Lebanon, PA area
D: Carries Imus and Don & Mike
E: Formally WIMX (FM)

COMMENTS:
-WNNK (Wink 104) continues to be Number 1. Although a Top 40 station, they play a little bit of good music from all Top 40 genres (now and then). It sounds good when put together, the DJs are not annoying and Bruce Bond is on in the PM. A good hometown station.

-WRVV (The River) seems to be sinking (no pun). Once a Number One/Number Two station in the market, they are at Number Five. They play mainly Classic Rock and AOR, but will play good new stuff and alot of the 80's. I think alot of people dislike the fact they have gotten more commercial sounding lately (liner between all the songs, phone calls on the air, alot of hype - stuff they didn't have when they started and made them unique and good to listen to) and their playlist gets awful sappy sometimes.

-WYMJ (Mix 99.3 FM - Formally WIMX) seems to have found something with their new Urban based format. They also carry Imus and Don & Mike. They went from a 1.4 in Spring 1994 to a 2.7 for the latest book. Don't know if it is Don & Mike, Imus or the music, but this station (only 3.5 kW as opposed to most of the other FMs above them in the ratings that are 50 kW) is on to something and seems on its way to a solid share in the Harrisburg, PA market.

I'm done. Any comments are always welcome.

Sincerely,
Mike Hale
halem@aol.com

66. Nashville RadioWatch

Newsgroup: rec.radio.broadcasting
Date: 1995-06-04 00:00:00 UTC
From: mdonegan@edge.ercnet.com
Message-ID: <3qr6dg$mko@vixen.cso.uiuc.edu>

Street talk is that WSIX-FM p-d Doug Baker is leaving for the music business. Baker would be the second program director in a row at the country station to leave radio for a job at a record company. WSIX, the number one station in Nashville for several years, has seen some slippage in its 12 plus figures since its high of 18.6 in the Spring of 94. It's is now at 14.7 with Gaylord's country outlet WSM-FM nipping at its heels with a 13.1 in the Winter book.

67. New England Radio Watcher: WBPS at last, plus the big twister

Newsgroup: rec.radio.broadcasting
Date: 1995-06-04 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3qr6dh$mks@vixen.cso.uiuc.edu>
Source record: 31643

(Mark Shneyder has returned from La-La Land, so we're back to
dual columns now...)

*At long last, months after they started using the calls informally,
AM 890 in the Boston area can officially call itself WBPS without
nit-pickers like me getting testy. As of this morning (6/1), the
old "WBMA Dedham/Boston" legals are gone -- replaced by the new
WBPS calls. This is the last part of the huge switch that saw
WBIV-1060 Natick go dark, its assets get transferred to the WBMA-890
CP, the whole mess get sold to Douglas Broadcasting, the format
get changed from leased ethnic to Prime Sports talk, and now
finally the 890 call change. Why the holdup? Seems they got
confused over which license was getting the call change -- and
accidentally applied for the WBPS calls for now-dark WBIV-1060...and
then had to straighten out the mess. Well, mess straightened...and
with any luck, these will be the last words I write about 890 for
a good long time!

*You may have seen the news coverage of the Great Barrington, Mass.
tornado, which claimed 3 lives and did as much as $25 million in
damage. It's nice to see local radio out there responded well.
The "Berkshire Eagle" of Pittsfield, Mass. reported on Thursday
that WSBS Great Barrington, an 860 kHz ex-daytimer that has not
been using its pipsqueak night allocation, stayed on well past its
7pm signoff time (presumably at full 2700 watts) to provide
emergency information as the twister hit at 7:15pm. Coverage was
simulcast on co-owned WNAW(AM)/WMNB(FM) North Adams, at the
other end of the county. Newspeople Mark Schane-Lydon, Tom Jay, Dick
Lindsay, and morning host Nick Diller all pitched in to help
with coverage. (And a special thanks to Mark for allowing WBZ
reporter Carl Stevens to assemble and feed his reports from
the WSBS studios on Tuesday and Wednesday!) 15 miles away in
Pittsfield, WBEC AM-FM, WBRK AM-WRCZ FM, and WUPE FM all expanded
their news coverage as well. Public radio WAMC-FM in Albany has
a satellite in Great Barrington, WAMQ-FM 105.1. This is the
old WBBS-FM, which was WSBS's FM station from the late 80s
until about 2 years ago. WAMC/WAMQ ran expanded newscasts,
according to the Eagle's Clarence Fanto -- but I have to wonder
whether WAMQ was on. Their transmitter is atop the Butternut
Ski Area in South Egremont -- which took some of the worst
damage. Even if 105.1 was off, WAMC's main signal on 90.3
from Mount Greylock gets down to the affected area very
well, so I'm sure it was being heard one way or another.

*And a correction to an earlier item: ABC gave me the wrong date for Gary LaPierre's Paul Harvey fill-in stint. It's Friday, 6/2, not Thursday -- so I'll be writing then. Let me know what you think...

Off to Norwich, Ct. for the weekend...we'll see what's new there.

-=Scott Fybush - fybush@world.std.com=-

68. North San Diego County Report: 6.2.95

Newsgroup: rec.radio.broadcasting
Date: 1995-06-04 00:00:00 UTC
From: "Christopher O Carmichael\"Chris\"" <chris@DOCServer.wccs.saic.com>
Message-ID: <3qr6dj$ml3@vixen.cso.uiuc.edu>
Source record: 31644

Here's the latest from the 55th Market: San Marcos,
Escondido, Temecula, Carlsbad, and Carl's Diner on I-15

KSDO's Roger Hedgecock interviewed Robert McNamara in May. The
segement was closed to callers, but Hedgecock asked the obvious
questions: "Why the book now?" Preceeding the interview, producer
Steve Cosio put together a three-minute music montage that
reflected on the "Vietnam conflict." The montage was EXCELLENT!
It included the Doors "The End," Billy Joel's "Saigon," and others
with the Vietnam theme.

Hedgecock's top-rated show heads to Washington, D.C., next week.
He announced that the show will originate from one of Kansas
Senator Bob Dole's rooms. His show is heard from 12:20 to 3 p.m.
on KSDO.

The San Diego Sockers have announced that KCBQ-AM as their new
station, effective next week. The CISL [soccer] team is on KCEO,
Vista, but the station is highly directional, with 250 watts after
sunset. ['CBQ-AM is 1.5kw after sunset]

Ted Leitner [KFMB-AM 760], said that the baseball network [ABC/NBC]
approached him about calling games. However, he complained on air
that the management of KFMB would NOT let him do this. Obviously
upset, Leitner ripped into the Midwest TV for their decision. KFMB
TV is a CBS affl., and is the flagship station for radio and
TV for the SD Padres.

Surprise of the week: KLAC-AM, Los Angeles, has been carrying the
NBA playoff games. No other station in San Diego has: not XETRA-AM,
or KFMB. XETRA-AM [Sports 690] has the weekend rights.

There is a published rumor on the street that the Tribune company is
selling the Escondido Times-Advocate to the Oceanside Blade-Citizen.
I bring this up, because the Friday paper contains "Soundtrack." It's
the only quality SD county radio column in print. I'd hate to see
Ken Leighton's center-spread on music and RADIO dissappear. Since I
moved to the area [Oct. 1993], his columns have been on-target [and
a quoted source for this report].

In today's column, Ken predicts that Mike Berger and Jeff Prescott,
currently hanging their comedy style on KFMB on Saturday, will
jump back to KGB. Berger and Prescott were previously at the station
in the 70s and early 80s. [then XETRA-FM/91x, XETRA-AM, and now KFMB]
Chic McGee is holding down the morning show after Kevin Kitchens
abruptly announced he quit last week

Moves: former KBZT-FM Charlie Fox is not at KKBH [the Beach].

New: KFMB-FM [Star 100.7] has launched a "Love Doctor" call in show. The Sunday 8 - 10 p.m., program deals with love problems. The moderator is a La Jolla-based psychotherapist who "wants to be annonymous."

What are people broadcasting which relates to recovery from alcoholism/addiction? Looking for REGULARLY SCHEDULED broadcast programs (radio, TV, cable) which focus on some aspect of recovery from substance abuse, alcoholism, drug addiction, involving some aspect of 12 step/Alcoholics Anonymous type approach to recovery. Eager to collect information regarding such programs (interview/profile/phone-in types, etc.). Send responses to SgtSober@AOL.COM.

Would like to know:

1. Station's call letters, city, state.

2. Program name; day of week; time of day and length.

3. Producer/host contact info.

4. Commercial or non-commercial?

5. How is anonymity preserved, especially with host or guests?

6. Is the program successful with audience?

7. Does the program attract advertisers? If so, what kind?

At KZPN FM in Bayside CA,
We are operating a small FM public radio station and rebroadcasting BBC World Service (under contract from BBC). We rebroadcast approx 16-18 hours per day and insert classical music for our local audience. Our total budget is 11,000 to 18,000 per year. The idea was to provide a *small* service that is truely community to our area without the usual begging and massive budgets.

PRI (Public Radio Intl.) was American Public Radio, no is claiming exclusivity of the BBC. We do not take from the sateliite feed but have made other arraingements.

We can't afford to pay their fees and a lawyer. Any comments from broadcasters (or anyone else)?

Leave comment on this group or EMAIL to kzpn@northcoast.com

thx Lee Olsen

According to Saturday's Daily News.......Calls and letters have been nonstop since McCoy announced these changes. The majority say Nite is fine; they'd like Kinkel to stay; and Jay and Reed kept in there present slots. Many thought that Max would get a shot at morning drive when Harry Harrison retires. The overall opinion was Max brought too much personality for management's tastes. Some think there may be further changes.

A number reflected my own personal feelings when I heard of the change. They feel something important in their lives has been taken away. Bobby in the evenings ("a great deejay"); Don at midnight ("such a gentleman"); and Max in the wee hours ("makes radio fun").

We miss you MAX MAN!!!!!!!!

Does anyone have the lastest Arbitron results for Los Angeles?

75. Important Announcement: AIRWAVES RADIO JOURNAL Now In HTML Format

Newsgroup: rec.radio.broadcasting
Date: 1995-06-06 00:00:00 UTC
From: EDITOR@airwaves.com
Message-ID: <3r0p4d$4ot@vixen.cso.uiuc.edu>
Source record: 31525
Cross-posted to: rec.radio.broadcasting,rec.radio.info,rec.radio.shortwave,rec.radio.noncomm,alt.radio.talk,chi.media,ba.broadcast

I am happy to announce a major breakthrough for AIRWAVES RADIO JOURNAL.

Effective immediately, Articles from AIRWAVES RADIO JOURNAL (the email
reflecor of rec.radio.broadcasting) and OTR (Old Time Radio Journal)
are available in full hypertext at the AIRWAVES web page.

Go to http://radio.aiss.uiuc.edu/~rrb/online.html and read the brief
file before entering the document server. Once inside, you can select
whether to sort the TOC by thread, subject, author or date.
Each entry in the TOC is hyperlinked to its article.

Once you you have read an article, You can then either go
back to the index of your choice, select the "next (or previous)
article" link, or, if there is a thread, you are also given a link to
the next article in the thread. Note the threading capability is
limited right now.

** AND THATS NOT ALL FOLKS **

All email addresses *and* URL's in the message text, are live
hyperlinks to their respective functions. The text is in proportional
font, rather than fixed width, for a more pleasing look. However don't
expect a lot of fanciness. There is currently no graphic support for
the article server, and there is no direct 'reply to the group'
feature. I am looking into adding that feature. In the mean time,
you can find a help file and posting gateway in the link called 'About
This Archive'. The lack of graphics makes this a very fast-paced
read. It looks godd in everything from Lynx to Netscape.

Right now there are quite a few articles in the server. I will
probably trim that number down when I see how all this shakes out.

Access the server at http://radio.aiss.uiuc.edu/~rrb/online.html

Send me mail at wdp@airwaves.com

I hope y'all like it...

Bill

Written June 4, 1995

It's a misleading title: I just returned from a week in Boston.
Some observations and comparisons with the Kansas City market:

* There is an active college-student broadcasting scene in Boston, with many of the colleges there having stations that cover all or part of the market. This type of activity is missing entirely from the Kansas City market; the closest thing to it is KJHK(FM) in Lawrence, Kansas or KCOU(FM) in Columbia, Missouri.

* Boston stations are loud. Slash-and-burn modulation is the order of the day. WXKS(FM) is the worst but co-owned WJMN(FM) isn't far behind.

* Speaking of WXKS, it isn't a very good CHR station, in my opinion. The playlist seemed stale, the announcing intrusive, and the signal and audio quality were not up to major market standards.

* The best station with the worst signal is modern-rock/alternative WFNX(FM). 'FNX has applied for a translator in the Back Bay, where its signal is drowned out by cross-modulation from stations atop the Prudential building. One could compare WFNX to KLZR(FM) in the Kansas City market. Although 'FNX has much more flair and a fresher sound, both are hard-to-receive signals programming a format whose target audience will make an effort to listen. The few, the proud, the fringe listeners!

* Listening to 'FNX's dance/ambient show, Spin Cycle, has helped clarify something that's been bothering me for several weeks about KLZR's formerly comparable Nocturnal Transmission. Spin Cycle stays on the cutting edge of music without getting self-indulgent. Noctural Transmission, alas, has become its host's personal plaything--one gets a sense of his personal favorites but no sense of trends in the ambient/techno/dance scene. It has ceased being a must-listen for me. It also should be on Saturday nights instead of Sunday nights.

* The number of Spanish-language broadcasters in the Boston market surprised me. It seems to be the format of last resort for second-tier AM stations. In the Kansas City market, gospel seems to be the format of last resort.

* WBCN, once a heritage album-rocker, is positioning itself as a modern rock station. It is a serviceable one, to be sure, but it's not all that interesting. If KYYS(FM) tried to go modern rock in Kansas City, the result would probably sound similar to 'BCN--too many consultants, not enough risks.

It was a great visit. A big thanks to Scott Fybush, Garrett Wollman, and Peter George for inviting me on "Let's Talk About Radio" and to Scott for much hospitality and a complete tour of Boston facilities during the week.

A couple of items back on the home front:

* St. Joseph's KSFT(AM) has resumed carrying St. Louis Cardinals baseball games after a year away from the Redbirds. KSFT, at 1550, is the closest station to the Kansas City market carrying games from the cross-state team.

* Kansas City's KCXL(AM) has complained I ignore it. OK, I paid attention to the station while driving back from the airport on Saturday, June 3, right at the 8.30 pm legal sign-off time for the daytimer:

* The satellite feed did not cut off until 8.33 pm.
* After two minutes of dead air, two promos played. One was for the locally produced Reflections oldies show, which was on KKFI(FM). It's moved to Saturday mornings on KCXL.
* To verify that legal nighttime had arrived, I checked KCTE, which was off the air, and KKLO, which was on nighttime pattern.
* There were three more minutes of dead air. By this time it was 8.38 pm and the station should have been off the air; instead, it played a couple of liners.
* Upon my arrival in Brookside at 8.44 pm, the station was still on the air with a silent carrier. By 9 pm, the station had left the air.

* In my mailbox was a pamphlet from KYYS, addressed to me (not to "Occupant"), telling me I could win free tickets to the Sandstone Amphitheater, a local concert venue, and I could "check out KY-102 and Sandstone for all your favorite artists like Van Halen, Eagles, Aerosmith, Tom Petty, REM, Rod Stewart, and more." Moby maybe? The entry blank also asks me to "tell us what you think about KY102." Heh-heh-heh-heh-heh....

Greetings from the City that never sleeps:

The fall-out from the personality shift at WCBS-FM continues to be felt. According to the Daily News, PD Joe McCoy continues to receive calls and letters about the switch starting Monday which resulted in the station axing overnight personality Max Kinkle. Meanwhile, CBS-FM is gearing up for next weekend's Radio Greats Reunion with portions of the weekend broadcast from the Museum of Broadcasting. Dan Ingram, Charlie Greer, Cousin Bruce Morrow and Wolfman Jack will broadcast Saturday from 12-noon to 11 p.m.and Herb Oscar Anderson and Dean Anthony will do the honors Sunday afternoon.

WRKS/Kiss FM adds Roberta Flack to it's lineup. The singer/songwriter works Sundays 12 noon to 2pm starting today.

Westchester's X-107 names Darrin Smith as music director. They also announce their entry on the World Wide Web at http://www.X107.com.

Sonny Bloch is in jail in New Jersey after being extradicted from the Dominican Republic. The financial talker has been indicted on fraud chargeswith 4 others.

WQCD/CD-101.9 is sponsoring a weekly concert series aboard a boat. Each Thursday features a cruise around Manhattan aboard a boat and a concert by one of the NAC artists.

That's all for now---

Tripp Rogers

What Richard quoted should be credited to The News' reporter-at-large and radio critic, David Hinkley. Hinkley is a doo-wop fan from way back and WAS a regular listener to Bobby Jay's "Friday Night Fifties", which should be Norm's now.

80. Eagle/Boston overnights?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-06 00:00:00 UTC
From: alr@world.std.com
Message-ID: <3r0p24$4k0@vixen.cso.uiuc.edu>
Source record: 31530

Hello RRB,

I've been listening with interest to WEGQ ("Eagle 93 7") to find out what their day-long lineup is going to look like. Until a month or so ago, they were running two full shifts with Scott McKay in morning drive and Stella Mars middays. In the afternoon, they were basically splitting one shift between PD Pete Falconi and Willie B. (Is this Willie B. Good?)

Recently, Pete F. and Willie B. disappeared from the airwaves, and Jo Jo Kincaid took over the afternoons.

My questions regard whether Willie B. will be returning, whether Pete F. will be back or will be an off-air PD, and what the plans are for the overnights. Do they plan to let a robot do the work, as with their sister station WBMX ("Mix 98-point-5")? If so, I'm wondering if anyone knows the philosophy of parent company American Radio Systems regarding use of talent. As a former AT, I wonder what the reasoning is for running two signals with good numbers unattended.

Thanks,
Alan

The funding for Station Inspections was restored in the Clinton Budget. I was visited for a routing AM Directional Inspection in October. The Same two engineers visited all Directional AM Stations in their district in 1994. They promised to be back in the future for an FM Inspection.

I had not seen an FCC Inspector in 15 years. Oh well, he would show up right after a thunder storm that blew out a coupling cap in on of the ATU's.

Ron

>* How do radio stations acquire their libraries?
> (I understand that radio stations work with record companies'
radio
> promotions people, but does that relationship apply for both old
and
> new music? In other words, if a radio station is starting from
> scratch how can it get all of its music?)

Record companies are usually good about supplying radio stations with current product. Some stations are known as "Reporters," they report their playlists to trade magazines. These stations can usually get almost anything they want from the labels (who want their full cooperation when they're "working" a record). This often includes library material. I have gotten many "oldies" from the labels, in some instances, the entire back library.

There are many companies who package and sell libraries by format. I call them "Greatest Hits" packages. They vary widely in size, cost and quality. They are usually available on reel, cart or CD. There are Gold as well as Recurrent and Current libraries available. One of the best is TM's GoldDisc and HitDisc series.

* Do/can the music sources give pre-digitized music?

It is my understanding that some companies are offering music libraries on floppies now. (I assume you mean for use in digitized studios.)

* Do pre-made lists exist concerning how much of what kind of music to buy when buying a large number of titles?

Not generally. It depends on your format and your PD. Most PDs have their own lists of titles they use. There is an abundance of research indicating what titles test well, though.

* Does a cataloging system exist for sale?

There are many computerized systems for cataloging and rotating your music library. The industry standard seems to be Selector, but there are many good systems available which also vary widely in quality, customization, ability and cost.

* How do radio stations pay royalties and to whom?

We have to pay BMI/ASCAP. Royalties for commercial beds are another matter entirely.

Hope this all helps! Let me know how your project works out!

Bob Gerhard
Program Director, KBAT/KQIP - Midland/Odessa, Texas

86. More thought on Real Audio.

Newsgroup: rec.radio.broadcasting
Date: 1995-06-06 00:00:00 UTC
From: shemenwa@uniserve.com
Message-ID: <3r0p2a$4kl@vixen.cso.uiuc.edu>
Source record: 31536

After taking some time to configure the real audio set up in my pc and then play around a little bit with it I have made some conclusions.

1) It's a good idea that will lead to other things. I guess the next step is realtime pictures and then realtime audio and video. You'll definately need fibre optics to run all that bandwidth I would think even with super compression.

2) For the radio industry, Real Audio has some interesting possibilities. Just think of all the demo tapes that usually cross your desk. You could select radio programs and personalities "on demand" from an industry site like "Airwaves", or from Broadcast schools. This would save you lots of time and help you qualify further the type of talent and programming you are considering.

3) From the advertising side of things customers have a unique way of "proofing" their radio commercials from the comfort of their own office. Some radio stations may even sell ad packages that include airtime and a realaudio listing of the commercial on the station's website. Come to think of it maybe realaudio could have some sort of realtime "capture" so that after you listen to it you can elect to capture the file and save for broadcast or perusal at a later time. Ad agencies could concievably make client spots available to all stations on the buy. All the stations have to do is go to the agency site and download.

4) It would also seem to me that if you could tie this realaudio server set up into a voice mail phone system you might have the makings of a Internet answering machine. Maybe your listeners would leave sound bytes, sports scores, or requests on a site for broadcast later.

At some of the RealAudio partnering sites this software is already being used to make audio transcripts available to cyberradionauts at thier convenience. One example of this is the CBC that has made available many recently broadcast programs in the realaudio format. They are also working on making newscasts available too.

Some of the pundits would have you think that RealAudio is going to be the death of radio. I still believe after playing with the software that radio is far from threatened by it. In fact, radio is in an advantage position of being able to use this software to make the medium even more responsive, flexible and fast. As I mentioned earlier, Radio is THE wireless medium for information and the Internet is still a WIRED network that eats lots of bandwidth. Simply from a distribution point of view radiosets are a more cost effective way of distributing information than laptops and cellular networks are right now. This may change, but not for a little while yet.

>In my opinion, real time audio will only be a threat to us in radio if a
>majority of our listeners end up
>listening to the radio on the computer. This isn't the case yet.

You're certainly right about that. And it would seem unlikely that we'll see much fo a change in that soon.

However, who REALLY knows what will happen? I mention that only after reading what I consider to be a GREAT article in the May 1995 issue of Wired Magazine. This may have been mentioned before in this thread. Even so, I HIGHLY reccomend everyone in radio read this article. For anyone who has stuudied the history of our whacky business at all this is fascinating reading. It points out some of the parallels between radio and the Net. Some of the simple twists of fate that made our business what it is...and makes you wonder what twists will make of this emerging medium. Great reading. Highly reccomended regardless of your feeling about the Internet.

88. Best remote system?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-06 00:00:00 UTC
From: daservis@ucdavis.edu
Message-ID: <3r0p2c$4kp@vixen.cso.uiuc.edu>
Source record: 31538

I am looking to purchase a new remote system for our sports broadcasts.
I would like the system to be capable of handling music as well.
Currently we are running analog over regular phone lines. I like the
ISDN equipment but most of our remotes are one shot deals. If you could
email me with your ideas I'd be elated as I'm currently at a loss.
My concerns are:
1. 15khz bandwidth (if possible).
2. bi-directional.

Since we are a campus radio station most of our sports broadcasts are
sent campus to campus. So I was thinking about the possibility of using
the internet.

I know this question is pretty open ended, but if you could send me any
ideas on how to improve on a symetrix T101 and a zercom remote system it
would be greatly appreciated.
Thank You
Darrick Servis

From: richwood@commspec.com
Message-ID: <3r0p2d$4kv@vixen.cso.uiuc.edu>
Source record: 31539

IR>I'm wondering if anyone out there is connected with producing a
IR>syndicated music program (such as "American Top Forty", where the
IR>primary material is recorded music)-- do you have to pay licensing
IR>fees to ASCAP/BMI or is that paid by the station that broadcasts your
IR>show? Or, do ASCAP/BMI collect from both?

Randy,
Historically, the stations pay the fees. Most are blanket licenses
for music stations, so there's no problem, since they'd be playing music
anyway. Make it clear in your affiliation contracts that the station is
responsible.

The only potential glitch is the entrance of SESAC into mainstream
music licensing. If you're using SESAC material, stations will have to
have a license with them.

90. Can 88.3 FM coexist w/TV channel 6?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-06 00:00:00 UTC
From: jeh@cmkrnl.com
Message-ID: <3r0p2e$4l0@vixen.cso.uiuc.edu>
Source record: 31540

Does anyone live in an area where there is a medium-power FM broadcaster on 88.3 (or 88.1 for that matter), and a TV station on channel 6?

My favorite radio station, KSDS-FM (winner of the 1993 Marconi award for best jazz station!) recently got FCC approval for a power upgrade (to a mere 16,000 watts). However on the last day of the comment period, the U.S. owners of XETV channel 6 filed a protest, claiming that the increased power of them FM station would cause interference to their signal.

So, I'm wondering if there are any "counterexamples" out there -- locales where two such stations co-exist without problems.

Message-ID: <3r3olm$aoe@vixen.cso.uiuc.edu>
Source record: 31450

Arbitron reissued the Winter 1995 ratings book for Phoenix Tuesday(June 6). Six diaries were deleted, two for having been completed by persons other than those selected by Arbitron (there is an investigation into allegations of diary tampering underway), two for excessive time edits and 2 for improper time edits that, with the edits properly applied, left the diaries exceeding Arbitron's "Heavy Listening Threshold".
Only three stations saw their 12+ number affected by the recalculation of the Winter book...adult standards KOY(550) moved up 0.1 from 5.9 to 6.0...AOR KUPD(97.9) dropped 0.1 from 5.0 to 4.9...and classic rock KSLX(100.7) dropped 0.4 from 3.8 to 3.4.
KSLX was the only station whose 12+ ranking was affected... slipping from 9th to 12 place.
The diary re-evaluations postponed the release of the Phoenix Phase 1 Spring Arbitrends from Friday(6/2) to Tuesday(6/6)[SEE PHOENIX FEB-MAR-APRIL ARBITRENDS]

We, KZSU, are looking to replace our beatup analog cart machines. We use these a lot for everything from LIDs to local music and PSAs to promos. Id love to hear from other stations on what they currently use for short recorded spots.

Analog Carts? Digital Carts? Hard Disk based? Mini-Discs? Other?

What do you like and not like about your current system?

Is your system used by the general dj staff or is it just the production director or engineering staff?

How many people use it and what is their needed skill level?

Passing along contact info for the company of your system would also be a great help.
thanks
mike

NATIONAL RADIO CLUB
P.O. BOX 164
MANNSVILLE, NY 13661
315-387-3583

Updated: June 5, 1995

The National Radio Club, is proud to announce the anniversary of the National Radio Club's DX AUDIO SERVICE. It was just over ten years ago that Fred Vobbe and the National Radio Club started the DX Audio Service. It was originally started as a "books for the blind" publication, taking information straight from the pages of DX News Magazine, (the magazine of the National Radio Club).

After several years, the magazine format changed to take on the sound of an "All News" or "Talk" radio station, with the exception that the material covered is only on the subject of listening and being in broadcast radio. Today, the DX Audio Service is one of the premier magazines on the subject of broadcast band (AM/FM) radio.

The formula to the success of the DX Audio Service is pretty amazing. The DX Audio Service is staffed by volunteers. The editors are all broadcast professionals, and have been involved in broadcasting. They give their personal time to provide information to readers that is crucial to their listening.

Fred Vobbe is the Chief Engineer of a television station in Lima, Ohio. He is also the owner of Great Northern Broadcast Company, a recording service and engineering firm. Fred has been in broadcasting for over 27 years. Jerry Starr is a 30 plus veteran of radio, and has spent most of his time at WHOT AM/FM in Youngstown, Ohio. John Bowker has been in broadcasting since 1946. He recently retired as Director of the Frequency Bureau of Radio Corporation of America (RCA/NBC). Phil Wayne has been in broadcasting since the early 70's, and has worked on both sides of the microphone. He is now working in the satellite industry. Jim Snowbarger has been involved in radio, and radio production, and presently works in the software industry. Jim also writes and performs radio production in his own studio. Bruce Conti has been involved in broadcast band DXing for many years, and specializes in Trans-Atlantic and long range DX. He is a design engineer for Lexicon of Waltham, MA.

I hope you have an opportunity to mention the National Radio Club's DX Audio Service to people that are interested in radio, and especially to blind radio listeners. If they would like more information, they can

send a self addressed stamped envelope to me, or for $3.00 or (2) IRCs
I can send them a sample cassette of the DX Audio Service.

Kenneth Chatterton
National Radio Club, Inc.

JUNE 1995 EDITION

94. Re: Eagle/Boston overnights?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-07 00:00:00 UTC
From: gstrassell@aol.com
Message-ID: <3r3ols$aoh@vixen.cso.uiuc.edu>
Source record: 31453

Alan, I have some info on the Eagle shifts...
Scott MacKay mornings
Stella Mars 10-3
JoJo Kincaid 3-8
Pete Falconi now an off-air PD, but will fill-in from time to time
Willie B has been elevated to production manager/WEGQ & WBMX
and
will only be on the air for occasional fill-ins

The night shift will be filled very soon.

We're excited about the addition of JoJo, who many remember as the evening personality at F-105 (WVBF) and Kiss 108 in the late 70's and early 80's.

By the way, the latest Arbitrend shows WEGQ jumping to 8th A25-54 with a 4.7 share. (It was a 3.3 in the Winter ARB). One year ago, WEGQ (then WCGY) was in the 1-share range in that demo.

Rumors continue to abound over the whats, hows and whys of the alleged rigging of classic rock KSLX(100.7)'s "Thousand Dollar Song of the Day Contest". On Friday, KSLX G.M. David Pugh announced that night jock Carol Springer was fired last month for that offense. No comment thus far from Carol, who jumped in a matter of days to AOR KDKB(93.3) or her attorney. Daily newsfaxes Inside Radio and the Radio Business Report are both following the story on a nationwide basis...with R&R sure to follow. The FCC is rumored to be on the case, as well.

Market and industry legend Charlie Van Dyke has switched voice-over allegiances. For the last year, the voice of sportstalk KGME(1360), Van Dyke's voice is now on IDs and bumpers for talk KFYI(910). Van Dyke did mornings there in the mid-80's, and programmed sister KKFR(92.3)at that time. Van Dyke's last daily on-air gig was in 1993 at KPSN(now KHTC 96.9). Since moving to Phoenix 15 years ago, Charlie's been at KTAR, KOY, KFYI,KKFR and KPSN, as well as being the on-air voice for KPNX-TV, and now, ABC-TV affiliate KNXV. Outside Phoenix, Charlie's been with KFRC, San Francisco, WRKO, Boston, KHJ, Los Angeles and KNUS, Dallas.

writes:
>
>Back before computerized music logs, we had to chart every song we
>played during the ASCAP check-up week, logging by hand each song we

[...]

Ah, the good old days of BMI logging! I remember it well! How 'bout if
you were music director and everything was on cart with no logging
info noted? Or worse yet..the record labels that never said who wrote
what!<g> But I go off on a tangent...

You can't use the song in a spot because it has left the programming
domain covered by your blanket ASCAP/BMI/SESAC licenses. When you use
music in a commercial, you must have what is known as synchronization
rights. These are negotiated separately from what most stations have
for music programming licenses. You must clear it through the Harry Fox
Agency or similar such agencies, most of whom seem to be located in
New York (Harry Fox is the big one). These days of lawsuits have ended
the use of anything but production library music for commercials at
most big stations.

There have been on-going articles and letters in Radio & Production
for 2 or 3 years now and I have a well worn copy of an NAB advisory
that I show account execs who have clients saying they want a specific
record in their spot. Most stations I've worked at over the last 23
years also have a standing policy of not using hit songs from their
formats in the spots. Why irritate listeners more? Besides,
it's a violation of copyright law. About the only time you can get away
with it is if it's a record store spot or a concert spot. The artists
most likely won't sue for that. But consult your legal advisor.
Disclaimer<g>

A couple local restaurants I frequent here in the Detroit area used to
play radio stations for their background music. They don't anymore
since they got into legal hassles. Sad but true.

How is Sonny Bloch doing his talk show on WRTN - on tape, or from wherever he is hiding to avoid prosecution?

Hope WMXV (not listed in the top 10) is making enough money to pay for all the multi-color TV ads they run...they seem to know what this 25-54 Male watches anyway...but they don't inspire me to listen at all. At least WYNY was offering to give away cash last season (the old 7:20 Thursday Birthday game that Z100 used to do in the 80s) when they were flooding TV with spots. I would imagine that "Film House" is crowing about the ratings gain WYNY showed in the Winter book because of their ads. It's not like all of a sudden NYC started liking country music...at the same time I don't think they should change format.

Listened to a lot of WCBS-FM lately, it seems they are concentrating on 50's and 60s, few 70s, which could be described in programmer-speak as "superserving their core" who want songs available nowhere else, rather than trying to play extra soul oldies to keep people from switching between them and Kiss-FM.

Paul Richards

103. Re: can 88.3 FM Coexit w/TV channel 6?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-07 00:00:00 UTC
From: robert573@dallas.relay.ucm.org
Message-ID: <3r3om8$ap2@vixen.cso.uiuc.edu>
Source record: 31462

Jamie:

I work part-time with a station at 88.5 on the FM dial. However we were at a time on 88.3 We had 3,000 watts of power at .3, and we are using 61,000 at .5 We had quite a few complaints about our signal overriding a channel 6. Of course I had no idea we had a channel 6 in the range of our signal. But if I recall correctly, yes you can have a TV 6 and a 88.3/88.5 in the same area. However, you will need a filter on the TV antenna terminal. I do not know the price of such filters, let alone where to get them. But it is quite possible that the FM station will have to provide those at no cost, to anyone who calls and complains of picking up the radio on their TV.

It never ceases to amaze me what else 88.3/88.5 can get into. We had a person livingnear the station who called and said (hey your signal is making my garage door opener activate!" Another one said "Hey your signal is going into my answering machine... so when someone calls me, they can't leave a message because your signal causes the machine not to switch tapes and emit the beep tone"

Music on hold, 'eh?

Rob Bass

104. bad taste doesn't necessarily mean obscene

Newsgroup: rec.radio.broadcasting
Date: 1995-06-07 00:00:00 UTC

Message-ID: <3r3om9$ap6@vixen.cso.uiuc.edu>
Source record: 31463

Yes it's the classic case of "usually <insert shock jock name here>
is funny but this time <he/they> have gone too far."

This time is the Don & Mike show and their audience participation
game show "Kill, Maim, or Torture," (aired 5/23) where they have
callers name who in their family they would like to, if there were
no fear of punishment, prosecution, or retribution, kill, maim
or torture. Then, Don & Mike call that persons family and ask
whoever answers the phone to guess who their family member said
they would like to kill, maim, or torture, and if the answers
matched, the original family participant would win a trip to
anywhere in the continental US.

Nothing to do with sex, but very bad taste IMHO.

Paul Richards
72212.441@compuserve.com

[Moderator Wonders: Why is it that when we think of obscene or
indecent, we always think of sex first. There are many things more
obscene than even the most deviant of sex. Makes one wonder why it is
OK to show raw carnage and casual murder, but prohibited to utter
certain phonetic combinations or to show a glimpse of a female breast
on TV. I see that as very odd, personally. Bill]

105. WBT-AM Simulcasting in South Carolina

Newsgroup: rec.radio.broadcasting

From: Shawn Goodin <76703.1034@CompuServe.COM>
Message-ID: <3r3oma$ap7@vixen.cso.uiuc.edu>
Source record: 31464

Well, it's official. At midnight on Monday night June 5th, WBT (1110 AM 50kW) started simulcasting on WBZK-FM in Chester, SC. WBT, based in Charlotte, NC, is owned by Jefferson-Pilot Communications, which made the decision to purchase the Chester station to fill a void in its coverage area west of Charlotte, and also to allow them to broadcast both the Charlotte Hornets and the Carolina Panthers at the same time if games by the two Charlotte pro sports teams ever occur at the same time.

WBT expects to change WBZK-FM's call letters to WBT-FM. The existing WBT-FM will receive (as yet unknown) new call letters.

106. WCBS-FM Radio Greats Reunion

Here is the schedule for the WCBS-FM radio greats reunion for the weekend
of June 10 - 11:

Saturday

6 AM - Harry Harrison
8 AM - Joe O'Brien
10 AM - Ron Lundy
12 Noon - Dan Ingram and Charley Greer
4 PM Chuck Leonard
5 PM Cousin Bruce Morrow and Wolfman Jack
11 PM - 3:30 AM Tributes to Radio Greats no longer with us

Sunday

6 AM - Ted Brown
8 AM - Ed Baer
10 AM Dan Daniel
12 Noon - Herb Oscar Anderson and Dean Anthony
5 PM Scott Muni
6 PM - Jocko Henderson
9 PM - Alan Frederick

This year some of the reunion will be broadcast from the Museum of Television
and Radio.

Happy Listening!!

>From Charm City...

It's been quiet up and down the dial here. Most stations are concentrating on their summer promotions. Items that are note-worthy...

Changes at V103 (WXYV-Urban) as Tim Watts is out. Lauren Thompson moves from afternoons to take over his midday shift and Jammin' MC Jammer jumps from evenings to PM drive.

WNAV (1430-Annapolis-Big Band) also shuffled their line-up moving Russ Handler from PM Drive to middays and adding Rob Thaler to afternoons.

Former Governor and former mayor turned potential mayoral candidate Willam Donald Shaefer filled in for Tom Marr on WCBM (680-News/Talk) tuesday afternoon. His future in radio is up in the air (a lot depending on his political aspirations). If he does become a full time talk host, he would join Alan Keyes (WCBM-Mid Mornings & candidate for GOP nomination for president) and Ellen Sauerbrey (WBAL evenings for a 13-week stint & former Gubernatorial candidate) as office seekers and holders in the talk radio game.

Stay tuned,

Jim Purther

Source record: 31542

Reply-To: ag365@freenet.Buffalo.EDU (Carl K. Gorney)

Up & down the dial in the #40 market:

*Bryan Scott,whose contract as co-host of WBLK(93.7,urban AC)'s Wake Up Club wasn't renewed,has landed on his feet at WUFO(1080,daytime only,licensed to Amherst,urban AC/gospel;The Pacesetter)as an account executive. He also had a tryout(and _not_ a "part-time stint",as the News' Tony Violanti put it in his Friday column)on WGR(550)as its midday talker.

*Speaking of WGR:

-Jim Meltzer left the general manager's position last week,but will stay on as a consultant to Rich Communications. Meltzer,who had been the GM since early 1991,had to weather one crisis after another-mainly to the talkers 'GR employed,especially J.R.Gach and Rich Michaels. Meltzer came to 'GR from WWKB(1520,then business-now hot talk)/WKSE(98.5,CHR;Kiss 98.5)(to add to Tony's bit on Meltzer).
-'GR and the Energizer bunny could be soulmates...the former's attacks on WBEN(NewsTalk 930)just keep going and going and going....(etc.) The latest: sports liners boasting they have the "manpower" to cover the Bills,Bisons and Sabres(parodying a comment made in an interview of WBEN's Howard Simon in Saturday's News). My take:they may have the manpower,but-with some exceptions-they don't have the brainpower. >:>
-Sources say Michael Calleri will return to WGR as its movie critic (he also fills those duties for WIVB-TV(ch.4)and Metro Weekend,a weekly entertainment paper),replacing M.Faust(who also watches movies for the bi-weekly Artvoice,in addition to owning a video store on Elmwood Ave.-the city's main entertainment area).

(tie)
27.KSAZ(580)Adult Stds. 0.5--->0.5

31.KUKQ(1060)Alternative n/r---> 0.4

Summary:
OJ and the Suns continue to pay off for KTAR.
The country battle is a 0.1 race again, with KNIX on the upswing, and KMLE on the down, nearly meeting each other in the middle.
The Howard Stern effect: In 12+ AM drive, KHOT had a 0.7 when it was KZRX, pre-Stern. With Howard, they have a... 0.7. Stern is also simulcast on sister KGME, which went from a 1.0 without Howard to a 1.0 with him. Add the two together, you get a 1.7 for the simulcast...which puts Stern in a tie for 17th place.

111. Fwd: SacramentoRadioWatch 6/1

Newsgroup: rec.radio.broadcasting

From: MLennartz@aol.com
Message-ID: <3r3old$ao4@vixen.cso.uiuc.edu>
Source record: 31544

BROADCAST BITS:
Cool 101 FM(KHYL)(Oldies) has secured the Sacramento broadcast rights to NFL San Francisco 49ers Football for the next three (3) seasons. The negotiations were intense between KHYL and KSFM-FM(CHR), KHTK-AM (Hot Talk), and KSEG-FM (CR). KHYL carried the games the past two seasons and, in both books, saw their autumn/winter cume set new records. Needless to say, this secures KHYL's place as a serious *player* for seasons to come.

A rumor now is official. KYMX-FM (Mix 96)(AC) and KCTC-AM (Nost) were sold, rather, exchanged last month. Tribune Broadcasting gives up the Sacramento combo as part of a swap for Henry Broadcasting's KVOD-FM. Tribune will now have two FM's in Denver, as Tribune already holds KOSI-FM (AC). Look for a 70's format? Not before Secret Broadcasting's KALC-FM goes 70's in Denver. A change of call's for the Secret property and 70's intensive staff is reportedly being assembled....but, hey, that's Denver, this is Sacramento.

Robert John, program director of AC formatted KGBY-FM (Y-92) resigned rather abruptly and, reportedly, has accepted a similar position in the midwest. KGBY suffered a dismal book this spring, but past experience has shown the station to be rather resiliant.

113. WNY RadioWatch; some shakeups

Newsgroup: rec.radio.broadcasting
Date: 1995-06-07 00:00:00 UTC
From: talk1370@aol.com
Message-ID: <3r3olg$ao9@vixen.cso.uiuc.edu>
Source record: 31546

Reply-To: talk1370@aol.com (Talk1370)

Things are shaking a little in the Western NY (Buffalo and
Rochester) radio markets.
First, what had been WEZO/93.3 is now "The River", emu-
lating a lot of classic rock stations in other markets that use
that name. (Call letter change pending, more info on that ASAP.)
They're running Don Imus in the morning, providing in-market
competition for Imus listeners with WHTK "Hot Talk 1280".
Since WHTK's pre-sunrise pattern is incredibly tight, possibly
the poorest of all Rochester AMs in the eastern and western
suburbs, this will be real trouble for Hot Talk 1280 as summer
turns to fall and winter. Imus listeners now have someplace
else to go with a more reliable signal. Since he was the strongest
attraction on that station, which was already mired near the bot-
tom of the Arbitrons, it's hard to see what future WHTK has
now that someone else with a better signal in the suburban
areas is also carrying him.
Meanwhile, down the Thruway in Buffalo we're still waiting
for the expected announcement of the long-delayed replacement
for WGR midday host Rich Michaels, who's now on a VERY short
leash in Cleveland. It was expected last week and COULD come
this week (PD Jim Pastrick promised a hire soon, saying it would
be someone less extreme politically than his or her predecessors
and it would be someone brought in from outside the market. That
means neither Doug Young nor some of the other local personalities
who have filled in, will get the gig permanently.)
However, a complicating factor could be the departure last week of
WGR VP/GM Jim Meltzer. He leaves after a pair of down books and a
lot of unwelcome publicity for the more controversial aspects of the
station's programming, not to mention instability in his management
team (three PDs in the space of a little over a year). They say he'll re-
main a "consultant" for the duration of his contract, and he's not leav-
ing town for another position just now. The help wanted sign is out.
Bob Smith, middays WXXI-AM 1370 Rochester NY

Gee, maybe Eddie Vrdolyak was right after all.....

As predicted after the results of the Winter Arbitron book, look for WLS-FM to make significant changes in the near future.

As you may recall, the "dynamic" duo of Tom Tradup and Drew Hayes turned WLS-FM (94.7) into a talk station featuring "lifestyles and trends". The FM signal had been simulcasting the AM programming. However, when the decision to split the station was made, afternoon host Ed Vrdolyak quit in a dispute over the decision.

The not so dynamic duo brought Robert Murphy out of mothballs and subjected Chicago listeners to him during the morning drive. The braintrust didn't bother to promote the station at all and genuinely seemed surprised that Chicago listeners basically ignored the station.

It is expected that the station will once again use the FM band as means to reach listeners who can't receive the AM signal. However, a more significant format change is possible. Speculation includes a country format (Chicago has only one country outlet-WUSN-FM (99.5) which is consistently in the top 5 of ratings) or perhaps something from the rock genre along the lines of WKQX-FM (101.1).

Turi Ryder, who had been handling the evening shift prior to the decision to broadcast the OJ Simpson trial just as the DNA testimony began (the most technical and probably least compelling part of the trial-there's that keen sense of timing, management), is out of a job. No word on Robert Murphy although it would make sense that he will join the ranks of the unemployed. Also, Richard Roeper, Sun Times columnist who had been handling the 9-11 am shift, may return to weekends. If not, he will have more time to concentrate on his column. He needs it.

Jay Marvin appears to have survived the storm. Jay will return to his familar spot-10pm to 2 am. His show, at least for the near future, will be simulcasted on the AM and FM bands.

If you listen closely, you can hear Eddie Vrdolyak and Ty Wansley laughing. Of course, a lot of people are amused by Tommy and Drew. They do a lot of funny things.

*A weekend trip through Providence to Norwich CT found WICE (550)
in Pawtucket RI silent. The station's sale to Back Bay Broadcasters
(owners of WARA-WWKX in the Providence market and WBNW in Boston)
just closed, and it appears the station will resurface as WPNW,
simulcasting WBNW's Bloomberg business news/local and satellite
business talk format. WBNW/WPNW just signed to carry Harvard
football as well.

*WZEA (102.1) in Hampton NH is also being sold, as reported
earlier, and M Street says the new owners want the WSTG calls.
An on-air announcement heard on the station this week said
it will be a "family-friendly" station...whatever that means.
(And promptly segued into a Prince song, at that! :-)

119. PHOENIX: SPRINGER ADMITS FIXING CONTEST

Newsgroup: rec.radio.broadcasting
Date: 1995-06-09 00:00:00 UTC
From: Michael Hagerty <Michael_Hagerty@azfamily.com>
Message-ID: <3r8b40$q78@vixen.cso.uiuc.edu>
Source record: 31469

On Friday(6/2), KTVK-TV, Phoenix broke the story that
KSLX had fired popular night jock Carol Springer for
in GM Dave Pugh's words "fixing the Thousand Dollar
Song of the Day Contest."
Late Wednesday(6/7) Carol Springer faxed a statement to
the KTVK-TV newsroom. The entire text is reprinted below:

"Over the last week, news reports on television and in the newspapers have prompted me to come forward and defend my character and my reputation as a professional in the radio industry.
"Yes, I fixed the contest. Realizing that what I had done was wrong I went to my General Manager. Payment was stopped on the check and I was fired. What I did was wrong. Although it may not be enough to say that the circumstances that were the motivation behind the original decision seemed to leave me with no choice but to fix the contest, no more can be said at this time. My attorney has advised me that to say more at this time could injure innocent parties and that is the last thing I want to do.
"I am currently heard on the air from 7pm to midnight at 93.3 KDKB and am looking forward to a long and rewarding experience there.
Carol Springer"

KSLX GM David Pugh and OM John Sebastian had no comment on Springer's statement.
KDKB GM Chuck Artigue said that Carol deserves credit for coming forward and admitting her mistake and that as long as the FCC has no objections and the story she has told him is true, she has a job at KDKB.
When asked about rumors connecting her with the Winter 1995 Arbitron diaries that were removed from the in-tab sample this week, forcing the recalcuation of the Winter book, Springer would say only "No comment."

The best people to talk to are the Community Broadcasting Association of Australia. They are located in Sydey, Australia. Speak to Christina Alverez (I think).

They will be able to help you with all aspects of starting a community radio station - they actually have a manual on how to do it.

Their Sydney telephone mumber is 02-310-2999.

Once you are an aspirant station (awaiting licence) or a fully licenced station, you can then set up a satellite dish and receive programming from my company - Third Network. We provide programming from 11pm (est) to 8am each day for all community radio stations - through ComRadSat, the community radio satellite network.

Currently our programmes are broadcast through 43 community radio stations around Australia each day, and I would really love to have a station on the Gold Coast.

Please visit our web site to find out heaps more details about Third Network, the URL is below.

Please let me know how you go with all this.

James

121. Beaker Street program on KAAY in Little Rock.

Newsgroup: rec.radio.broadcasting
Date: 1995-06-09 00:00:00 UTC
From: SNOWMAN <jlsnow@fcseng.frco.com>

Source record: 31471

I have been absent from this news group for several months so pardon me if I seem to have missed something. I probably did. I usually do.

Several months ago, there was some discussion here about the program called Beaker Street that ran nightly on KAAY 1090 in Little Rock Arkansas back in the late 1960's and early 70's. The program was an erie mix of various forms of acid rock, blues and generally underground music. You didn't have to be high to enjoy the program, but it probably helped.

Living in Iowa, I remember that program well and was curious about it's origins etc. The host was Klyde Clifford. Contrary to suggestions in that discussion, there was only one Klyde who hosted the program from it's inception until late 1974. Others hosted it for a short time before it went off altogether within about a year after that.

In march of this year, I contacted Klyde by telephone and did about a thirty minute interview. We talked generally about his experiences doing the show and what life was like out at the old transmitter building in those late night hours. And, yes, Klyde is still doing a derivative program on an FM in Conway Arkansas on sunday nights. He has a day job and eats regularly.

If you would like to obtain a copy of the interview, send e-mail to me and I'll tell you how to get one. The only cost to you is the cost of a tape and some postage.

We were faced with the same problem at KKLO in Leavenworth.
We had an old 386-25 computer that we upgraded to 4 meg ram and 500 meg hard drive.
We went through about 3 sound cards to find one quiet enough but found an old Pro Audio Spectrum card that works very nicely. Sound Blaster was too noisy.

The major issue has been getting the right input level for recording.

We are using CART shareware to play spots. There is some minor clipping between spots.

Encountered some stereo to mono problems at our AM station which we resolved by turning off one channel of the card.

I record some spots on my Gravis Ultra Sound card in my office. It has built in audio leveling and is real easy to record on. Seems to be nice and quiet also.

We are creating some software which will allow us to que up more than 5 spots at a time and address the clipping problem.

Great at least for us. Hell of a lot cheaper and reliable than those damn tapes!

In article <3r3olo$aof@vixen.cso.uiuc.edu>, mhowes@netcom.com (Michael Howes) wrote:

> Analog Carts? Digital Carts? Hard Disk based? Mini-Discs? Other?

We use DigiCart II's from 360 Systems (Westlake Village, CA). We originally installed DigiCart I's in the spring of 1993, then upgraded them to DigiCart II's.

> What do you like and not like about your current system?

LIKE: Hard disk, digital audio; clean sound; can do either linear PCM or Dolby AC-2 codec; has built-in editing capability; autostart on record; lots of remote control options; one machine can replace 3 analog cart machines.

DISLIKE: Backup is inconvenient; not networkable (spots must be transferred to Bernoulli disks and physically transported between machines).

> Is your system used by the general dj staff or is it just the
> production director or engineering staff?

Used by all announcers; all commercials run from Digi-Cart.

> How many people use it and what is their needed skill level?

3 full-time announcers; 3 part-timers; 2 production people. Anyone who can use analog carts can use Digi-Carts.

> Passing along contact info for the company of your system would also
> be a great help.

The Upper Midwest Communications Conclave is its 20th year as the Industry's Premiere Learning Convention! Conclave '95 will be held at the Minneapolis Marriott Convention Center July 13-16. Guest speakers confirmed so far include: Stan Freberg, infamous & creative adman/madman---Dennis Green, Head Coach of the Minnesota Vikings (sharing motivational secrets)---and The Fabulous Sports Babe! Each day at the Conclave offers something different: Thursday--a walking tour of Twin Cities radio, The Aircheck Clinic, and mini-symposiums on research, promotion and small market survival. Friday, enjoy compelling dialogue in the Format Breakout Rooms (in the format of your choice). stroll through the Conclave exhibit area, and attend sessions on understanding the "new" Arbitron, marketing and creative copywriting. Saturday, another round of format breakouts, the GM Hot Seat, and recognizing harassment. Recording artists that will be in attendance (some performing!) include: A+M's Jann Arden, Capricorn's Sonia Dada, Arista's Jeff Healey Band, Elektra's The Rembrandts, Island's Jude Cole, and RCA's Bruce Hornsby, and more TBA. Fore more info, call 612-927-4487 or e-mail me! Thanks & see ya in Minnesota!

Why would Secret flip KALC to 70's when it's sister staion KIMN is already doing '70s??? Besides, KVOD is one of the country's oldest, highest rated and most successful commercial classical stations. To flip out of a solid niche to go into a fad format such as '70's would not only cause an uproar among the notoriously well-connected and influential classical audience but would also be bad business sense.

From: srmorin@kira.ecs.umass.edu
Message-ID: <3r8b4g$q80@vixen.cso.uiuc.edu>
Source record: 31484

Western Massachusetts was treated to some exciting radio listening in the early evening of June 6th, from about 5:30 p.m. to 7:10 p.m. with a E-layer skip that brought in stations from most of Florida. Orlando and Miami were the most notable markets present, although I believe some stations from Jacksonville also made an appearance.

I'm looking for some information of stations I received but was unable to obtain their legal's: (why do skips always knock that stuff out?)

The first station was from the Orlando area, XL106.7, and they also have an email address on Prodigy that I was unable to pick out. The second is I95 (on 95.5) from the Miami area. The third station I believe was WLNY or WYNL and they were on 107.7, but I was unable to get their location.

Thanks!

I don't know, but our station, WAER-FM 88, is on 88.3. We recently
increased our power, and we have had problems with a local TV station
that's carried on channel 6 by the local cable company. Apparently,
ch.6 is close to our frequency of 88.3 MHz, and that contributes to the
interference problem. I cannot go into the details because there have
been some legal problems, but I am mentioning the existence of this
problem because it has been mentioned in the local press and is widely
known. We're still trying to work out the situation, and have been
trying to help various people with their interference problems.
If there's a way to solve this once and for all, I'm sure my boss would
love to hear it!

Marie Lamb
WAER-FM 88 (speaking only for myself)

Jamie:

The answer must be NO. Channel six has a band from 82-88 MHz. A station on 88.3 is just 300 KHz above the channel. Any radio filters out undesired spectrum with a band pass filter, usually in the IF circuits. The ability to accept a frequency, and reject a nearby frequency is the principal cost in making a filter.

Asking a TV set to reject a strong signal 300 kilohertz off a desired 6 megahertz wide channel would be like asking an FM radio tuned to 88.3 to reject a signal from a stronger station at 88.465 MHz. Present FCC rules require the next FM station up the dial to be at 89.1.

These rules respect the cost the consumer must pay to be able to get a radio or TV to produce acceptable reception. If the expected cost of the filters in sets were raised, we could have more TV and FM stations.

In this case, since the station is Mexican, the FCC may choose to allow interference with the TV station. If it were a US station, the signal at 88.3 would be prohibited.

I'm not sure about "medium power", but I do know there is a 300 watt 88.1 here in Milwaukee--a channel 6 market. The trick is to co-locate the FM and the channel 6 antenna--it reduces the chance of interference. Also--today's transistorized xmtrs are far more stable than in the old days, when drifting was very common.

139. WALE Providence: Is this for real?

Newsgroup: rec.radio.broadcasting

Reply-To: tony@bosauto.com

Hi, folks. I got a peculiar call at my office a couple of days ago, and followed up with the guy today. I'm trying to figure out whether the "deal" he pitched me makes any sense at all, or if it's a total scam. I'm ordinarily a pretty skeptical guy, and I can certainly see much downside possiblity here, but who knows...? Maybe you have an opinion. Here's the story:

Man calls me, claims to be from WALE, a talk radio station in Providence, Rhode Island (I'm in Boston, which is about an hour North, for those of you who don't know where things are in this part of the world).

He tells me I've been selected for a rare opportunity (red flag goes up), that they are conducting a nationwide talent search (second red flag goes up) to find new on-air talent for his station. By the way, he never asked for me by name, he just called the company here and talked to me when I answered. When I asked him why he had chosen to call *me* (I believe my exact words were something like, "and what exactly have I done to earn this honor?") he sort of mumbled something about our name being selected by their market research people, blah blah blah (third red flag).

Anyway, the deal is this: I can host my own talk show in my area of expertise, which happens to be computers. I can invite whomever I want, discuss whatever I want, take calls, etc. This involves a 13-week commitment, for one hour a week, 8-9 a.m. on Thursdays (which I guess is not too bad, seeing as how it's drive-time and all). This was presented to me as a marketing opportunity; in other words, they are not offerring to pay *me* to do this, they want me to pay *them*. Now, ordinarily, I would've hung up the phone at that point, but some of this appears to have some sort of merit.

Along with my one hour show each week, I get 10 60-second spots each week to advertise my company, plus six thiry-second promos for my program. Plus, let's not forget, an hour in drive time each week to do whatever I want. For this package, I am asked to pay $300 a week, a total of $3900.

Now, I think I recognize this for what it is, but I'm not sure. I figure WALE is looking for creative ways to boost their ad revenue, so they're trying this approach. In effect, I'm being offerred an opportunity to air infomercials (if I want) on their station. Either that, or the station simply does not exist and someone is trying to extract money from me for nothing). I have no illusions about being

selected for my great personality, reputation in the computer industry, or anything else -- I'm pretty sure I was selected out of some mailing list, or perhaps even the yellow pages. I am bothered a little by the slightly sleazy approach here, but on the other hand, the deal was presented to me in more or less straightforward terms, albeit with a little bit of a sugar coat.

He claims that WALE is a 50KW station with a coverage area which includes all of Rhode Island, Southeastern and Central Massachusetts (including affluent Cape Cod and the city of Worcester), and Eastern Connecticut about as far as Hartford. I am wondering how a station which reaches all those places fails to have even a weak signal here in Boston, though. I understand about directional signals and much about radio propogation, and I can believe that this station is aimed away from Boston, but would a 50KW station really be impossible to hear just an hour north of the transmitter? That seems to me to be a tad unlikely, but I dunno.

Oh, the final point he makes is that I own this programming. I get the master tapes after each show airs, and the station does not own a thing. So even if no one listens to the show, I'm getting 13 hours of studio time, production assistance, engineering, etc. for my money.

For my part, I've verified that the station does exist (or at least that it's been listed both in the phone book and in lists of broadcast stations for several years). When I call the phone number, actual people answer (not just the guy who called me -- I've heard at least three different voices at various hours of the day and evening), so if it's a con operation, there are several people involved.

So, my questions to the floor are:

1- Has anyone heard of WALE? Are they a professional operation? Do they have "real" programming, or does all of it consist of poor programming by amateurs who have essentially bought air time from these guys? As I said, I know the station exists, and has for a few years, but I'm wondering if the station has been bought by some opportunistic con-man; perhaps it's no longer on the air at all, or something...

2- Does this pitch sound familiar? Are other stations doing it? I presume this is *not* a typical way of "finding new talent," as was suggested to me. Am I right in being skeptical?

3- Am I being offerred a good deal? A shady deal which may work on my behalf if I do well? A bad deal which will rob me of my $3900 and leave me with not much to show for it? Is this radio's equivalent of vanity presses in the publishing industry? Are the numbers too good to be true? They seem that way to me, which strongly suggests I'm being had. But I can't find anything *in particular* wrong with this.

4- What is the value of a sixty-second commercial spot in prime time on, let's say, an average-rated radio station in a middle-to-high-end

market? If I'm paying $3900 just to air these 130 commercials over 13 weeks, it sounds like I'm paying $30 for each spot. That sounds like quite a bargain to me, but I don't know. Hell, if I'm paying just for the advertisting and each ad is heard by even fifty people, it sounds outrageously cheap. Am I missing something?

5- In general, assuming this is on the level and assuming that I could pull it off and produce some sort of quality programming, is there any reason I shouldn't take advantage of this?

I'm very curious to hear what everyone thinks. Please respond here or by Email. Thanks.

>started simulcasting on WBZK-FM in Chester, SC. WBT, based in Charlotte, NC,
>is owned by Jefferson-Pilot Communications, which made the decision to
>purchase the Chester station to fill a void in its coverage area west of
>Charlotte.....

Yep and now York and Chester (all of Chester county BTW, Rock Hill still has a station or so not simulcasting Charlotte stations) have NO local radio service at all. Person who owned WBZK had ALREADY turned off Chester WCGD 1490. What becomes of the 5000 watt DA AM on 980 that WAS WBKZ (AM). Is IT turned off as well?
I guess local radio in the small to medium markets is getting closer and closer to being extinct, especially here in SC.
At least Union SC hasn't to worry. Art Sutton of WBCU (1460 1000 watt day 1000 DA-N) knows how to do radio in a small to medium market that shames larger markets and wins awards to prove it!

Actually, the call letters for 93.3 (licensed to Avon NY) changed a few days before the actual format switch to "The River." The new call letters are WHRR.

The station is owned by Bob Savage, who also owns WYSL (AM) Avon, and has a history as a personality in the Rochester market (at WBBF, I believe). In fact, Bob originally owned the 93.3 CP (as WYNQ) before it was sold to the Lincoln Group (owners of WHAM/WVOR) and put on the air as WEZO. When the Lincoln Group later bought WPXY, the 93.3 frequency was sold back to Mr. Savage.

With the River now on the air playing classic rock, the Nerve (WNVE 95.1/95.5) playing modern rock, and WMAX 106.7 doing a progressive (almost AAA) format, I'd say the market's heritage AOR (WCMF) is rather surrounded at the moment.

It sounds to me like "The River" must be working in cooperation with WHTK, since they use the same news and traffic guys as HTK. I would also assume that when a station becomes an Imus affiliate, they are granted market exclusivity for the program. This leads me to believe that WHTK may have orchestrated a simulcast, realizing that 93.3 expands the reach of the program into a geographical area that is not well-served by the AM.

Strange things brewing in South Florida...

A/C WRMF morning personality Kevin Kitchens left the station to head to San Diego a few months ago. Since then the competition, Lite A/C WEAT (Sunny 104.3) has been running TV spots encouraging people to tune in now that Kevin is gone.

Kitchens resigned afer only three months in San Diego. He resigned, saying he fel like a squre peg in a round hole. Meanwhile, his co-host, Jennifer Ross resigned from WRMF and the Palm Beach Post suggested that both were headed for Sunny.

Add to this rumors that Sunny is about to go head to head with WRMF with a mainstream personality based A/C format.

Now WRMF is announcing hourly that if they get a "good enough response," they can entice Kevin to return to West Palm Beach. Last night they had a "welcome home party" for him, but no announcement that he was returning to the air.

..more anon...

Meanwhile at CHR WOVV/Star 95.5, there's been a bit of an exodus as three staff persons have moved on to other positions. Morning co-host Lane London moved to Chicago, midday/Production Director Tony Q. Fox accepted a similar position at 70s WBGG/Big106 in Miami and night man Scott Chase ("Dr. Mixx") exited for the PD position WA1A in Melbourne.

149. Canadian CB... calls -- more info

Newsgroup: rec.radio.broadcasting
Date: 1995-06-10 00:00:00 UTC
From: richw@mks.com
Message-ID: <3rdb35$8li@vixen.cso.uiuc.edu>
Source record: 31404

A while back, there was some discussion in rec.radio.broadcasting about the use of call signs beginning with the letters "CB" by stations of the Canadian Broadcasting Corporation (CBC) -- even though, technically, the block of call signs beginning with "CB" is assigned under international regulations to Chile, not Canada.

At the time, the only information I had on this issue claimed that there was an unidentified "international agreement" under which CBC stations were allowed to use calls beginning with "CB". I made further inquiries, and today I received some additional information from an official of Industry Canada (the federal government department responsible for radio and TV):

In 1937 the CBC requested from the Department of Transport that call signs beginning with the letters "CB" be assigned to the CBC. It was pointed out that although the international assignment of call letters beginning with "CB" properly belonged to Chile, the use of any call letters for broadcasting was feasible under the General Radiocommunication Regulations of Madrid 1932, provided precautions were taken to avoid the possibility of confusion.

As Canada is far away from Chile, and the call signs would only be assigned to CBC stations operating in the standard broadcast bands, i.e. not short wave, the Department of Transport approved the use of the "CB" call letters by the CBC, with the understanding that their use in Canada would not conflict with the use of the same call signs in Chile.

The reply did not specifically indicate whether Chile was consulted on this issue back in 1937, or whether Chile has ever explicitly either acquiesced or objected to the CBC's use of "CB" calls. I'm making a followup inquiry on these points, and if/when I receive a reply, I'll share it in this newsgroup.

No, my original message referred to the old WQIO-AM 1060 in Canton, which was Top 40 from about 1977-81, then Country after that, and eventually was sold and ended up as WRCW with an all-over-the-road format.

WQIO, a/k/a "Q-10," was a helluva Top 40 station in its heyday (especially for a daytimer in a market that size) and was programmed by Ron Foster, who came there from WFMJ-AM in Youngstown, I believe.

151. Re: Carts and Digicarts

Newsgroup: rec.radio.broadcasting
Date: 1995-06-10 00:00:00 UTC
From: RobABass@aol.com
Message-ID: <3rdb36$8lk@vixen.cso.uiuc.edu>
Source record: 31406

Regarding cart machine systems... I work p/t for a station that uses 360 System's Digicart. Here are my likes and gripes about it:

Likes: 1. Easy to use!!! No major training needed
2. Digital! Not analog... No tape hiss (except from tape hiss from master spot tapes, etc...)
3. 8 hours of stereo audio recording time!!! (compressed, but not bad at all!) (on hard drive only... Bernoulli's for digicart I's have 21 minutes each...)
4. head/tail trim capabilities... allows you to have very tight starts by trimming off excess blank at the beginning of the recording (such as if you start the unit recording but didn't have your master cued up properly)

and now here are my.....

Gripes: 1. Bernoulli disks can go bad! Often times in a place where you had recorded material. When this happens, you can't copy the spot to the hard drive. And the disk itself is now useless (our experience of this has been very minor, but is tollerable)
2. Spots will scramble out of order after power failures! If you had 80 commercials, numbered 1 through 80, and you had them in numerical order (i.e. 1, 2, 3, 4, etc...) they may not be that way after your power has been restored
3. TER and SEC tones can NOT be recorded until AFTER you finish recording your spot. This isn't to bad if your spots are only :30's and :60's... but if you have features that are longer, it will take more time (Note, I am told this problem was corrected on Digicart II's...)
4. Bernoulli disks have to be formatted before use... if you aren't careful... you may end up formatting your hard drive!
5. Direct recording to the hard drives may eventually become inpossible, as the drive gets near full, even though you still have blank space... This usually happens to us after numerous dubbing from Bernoulli's to the hard drive.

If all of those flaws could be corrected, I would be happy! I think most of them were corrected on Digicart II's, but we haven't upgraded yet. I do not mind having to transfer spots from the production units to the broadcast units via the Bernoulli disks...

There is one other problem with our Digicart units, but I think it's at fault of our technicians... The units in broadcast sound distored on playback, and they make distorted recordings. The units in production are all OK. But if you record something in production and take it to braodcast, it sounds slightly distorted. I have reason to believe this

was a wiring error... I think our techs wired them out of phase (the Digicarts have balanced inputs/outputs... but I think our broadcast board has unbalanced in's/out's... and they didn't use a transformer to convert phase from balanced to unbalanced and vice versa...) Is anyone else out there using DIgicart's, and have had this problem? Was it indeed a phase probelm, and was it correctable?

[Moderator's Note: Not sure if this fits or not, but decided to take a chance on it. *PLEEEEEEZE* reply to the poster Gary L. Warren (teriw@tenet.edu) and not to the newsgroup. Thanks... Bill]

I'm trying to get some discussion going on several echoes/forums on a never-ending trend in the news and entertainment media (broadcasting AND print) by which my wife and I feel we have been given the short shrift. To try to summarize our situation: I'm a 34-year-old paraplegic who's basically unemployed except for a few bucks I make at a desktop publishing endeavour (GLW ENTERPRISES). Even though I have a BA in Mass Communications and a Minor in English/Literature, I haven't been able to obtain continuing employment in my fields of study. And in Midland and now Johnson City, Texas, there is no accessible transportation for me to use to travel to a job, much less find work as a journalist of any sort. The sole exception to this has been my printed and online *disABILITY NEWS-letter*, since 1989.

The gist of my problem is that I had been on Supplemental Security Income (SSI), Social Security, and the Medicare and Medicaid which came with both programs until my June 1993 marriage to a public school teacher from Odessa. Even though we reported the marriage a month after we "got hitched," the Social Security Administration (SSA) took its sweet time to cut me off. Thus, in January 1994, I found myself cut off from all federal aid AND mandated to repay those "overpayments" SSA made to me during the five months between our July 1993 meeting with my SSI rep. and the 1994 suspension of benefits. Please keep in mind this cutoff occurred despite (a) my wife having to support us in our Midland 1-bedroom duplex AND her kids still living in her Odessa mobile home (which I was unable to move into, necessitating our living in the Midland duplex), (b) the costs of most of my medical supplies were minimally handled by my Medicare/aid, (c) the semi-federal medical insurance from the American Postal Workers Union that my mother had me under also got temporarily suspended, and (d) my overall unemployment except for my occasional dtp jobs, which at best covered the daily classified in the MIDLAND REPORTER-TELEGRAM (MRT) and an occasional piece of software or bimonthly HP Deskjet 500 printer cartridge.

Not knowing what else to do, we tried terribly hard to get the local, state and even national media to cover either our specific SSA foul up or the basic dilemma of the disabled having to remain unmarried and/or unemployed to retain their cash and health benefits. I also flooded several media Internet mailboxes with ASCII copies of my newsletter's May 1994 edition detailing our problem with Social Security. The only tangible results from our media barrage were either excuses about why their editors weren't interested or promises of coverage which never came about.

So after my explaining all this, can SOMEONE on this list tell why obtaining decent media coverage of some VERY important disability issues such as this is like hitting a brick wall?! Some possible answers I'VE come up with are:
1. Few local reporters are competent enough to investigate and report on complex SSA matters, let alone disability issues. In Midland-Odessa, where all the media yearly rehash Jessica McClure being trapped in a dry well in 1987, the lack of competence of anything beyond this or summer stories about potholes in the city streets (which the Midland-Odessa NBC affiliate did weekly reports on by the time we moved to Johnson City last summer).
2. SIMPLE stories as a disabled person having his wheelchair stolen (which the MRT reporter did last summer in lieu of the interview he did with my wife and me) are easier and more "newsworthy" than more complicated problems of the disabled.
3. Some reporters and editors may have been "burned" by others who took their plights to the press, then later profited and/or lied to those editors/directors. Maybe these media personnel felt I was lying, too? Perhaps, but we had and still have plenty of documentation to back up our claims (i.e. medical bills, threatening SSA letters, etc.). All these editors or reporters had to do was to request proof. We would've been glad to supply it!
4. Maybe some media people felt/feel I was deservedly punished for marrying, regardless of the SSA bungling, my medical bills, or the issue of SSI marriage penalties. If this is so, then why isn't it EQUALLY true for marriage penalties by the IRS, or for "regular" Social Security retirees who get their checks and other benefits with comparatively fewer probs??
5. Finally, most media (and Temporarily Able Bodied Persons (TAB's for short in disability-activist lingo)) feel the disabled just ISN'T as an important constituency or afflicted group than blacks, the homeless, women, etc. It really seems to me that the media feel SOMEBODY SOMEWHERE will "take care" of the disabled, whether or not the disabled need or desire the means to take care of themselves or should obtain the services to lead productive, employable lives (i.e. personal attendant care, accessible public transit, medical insurance without prohibiting pre-existing clauses, etc.).

In terms of the radio industry, there seems to be even FEWER outlets for discussing or investigating disability issues. The most recent radio fare I'VE heard was a Fall 1990 LARRY KING interview on Mutual Radio with Ed Roberts, the California disability activist who died over a month ago. While there may have been sporadic stories on NPR or some such news-concentrated radio station, *I* certainly have not been made aware of it. I'VE even considered using our family's dual deck boom box to put together my own disability news magazine. But unless I can get continuous, substantial income, this idea will just remain a pipe dream.

Anyway, I'll look forward to any responses about my plea. Thanks for listening!

WXXL (licensed to Tavares, FL) is XL1067@aol.com

> The second is I95 (on 95.5) from the Miami area.

no 95.5's in Miami but there's a 95.5 in Ft Pierce (WOVV). There's a 95.7
in Homestead, south of Miami, which is spanish.

> The third station I believe was WLNY or WYNL and they were on 107.7,

might be WYNR in St Simons Island, GA, if it was playing country. There's
a 107.7 in Mt Dora (Orlando) but it's WMGF.

Hope this helps!

How does this sound-
WHLY-FM 106.7 Orlando, FL
WJYO-FM 107.7 Orlando, FL
I could not find I-95.5

I remember sitting outside in a very slow moving late afternoon bank teller line in my car in 1990 for about thirty minutes listening to WWLV-FM 94.5 from Daytona Beach, FL to Livonia, MI. If I moved the car only a few inches, the station was gone. Also, WAPE-FM 95.1 from Jacksonville, FL was a good strong station one day around Romulus, MI in April 1992.
The best sporadic E-skip propagation, though, was when both Florida PBS affiliates WEDU-TV channel 3 from Tampa and WUFT-TV channel 5 from Gainesville were received clearly in Dearborn Heights, MI in early 1981. I also received KOTV channel 6 in Tulsa, Oklahoma around this time at the same receive location. I could also regularly clearly watch virtually all Cleveland, Ohio broadcast stations in the early 1980's after sunset until dawn. These are factual accounts. The next sporadic 'skips' should occur around 2002.

An obituary in the Los Angeles Times alerted me to the passing of Gaylon Horton. He had leukemia, and was just 42.

I first came in contact with Gaylon in 1972 when he was Music Director at WTBC in Tuscaloosa, AL. I was a promotion man for Bearsville Records in NYC. The names of the people who I spoke with in that small market are etched in my mind: Allen Burns, Russ Davis, Courtney Haden, David Lankford, David Broughton and Gaylon Horton. I loved all of those people, and looked forward to my weekly calls to talk about Todd Rundgren :)

Gaylon moved to Los Angeles to work for the Welk Music Group (music publishing) in the late 70's, after working at WVOV in Huntsville. I moved to Los Angeles in 1976, and so we were re-connected.

I only want to say how wonderful this man was, and how he was truly one of the "good guys." Radio lost Gaylon in 1977, but on this sad day we have all lost a spirited individual.

: info noted? Or worse yet..the record labels that never said who wrote
: what!<g> But I go off on a tangent...

Well, when we had to do BMI logging, the production director had to supply the song and writer names for each song used in each spot during that week. Also, we weren't supposed to use records where no author's name appeared, supposedly it violated our BMI and/or ASCAP agreement for the very reason that they wanted to know *which* song was played in order to distribute royalties properly. There are lots of songs with the same or similar names, and the writer's names serve to distinguish among them.

: A couple local restaurants I frequent here in the Detroit area used to
: play radio stations for their background music. They don't anymore
: since they got into legal hassles. Sad but true.

Had to do with the "hot dog stand" rule or whatever it's called. If the speakers are the normal ones supplied with a stereo it's okay to use it without royalty payments, but if it's piped through an existing PA system it's not. Why? Because until the stereo unit exception to the rule was made, some poor hot dog stand guy was forced to pay music license royalties. He claimed it was for his *own* amusement, not for the amusement of his customers.

Source record: 31418

Does anyone know what ever became of "The Poorman" (Jim Trenton)? Poorman was the host of KROQ's "Love Line" show here in Los Angeles. He was very entertaining although a might "active" for KROQ's management - so they suspended him a couple of years ago. The final straw was when he took 200 listeners to the home of another KROQ personality after his shift one night as a joke.

The "Love Line" show is absolutely horrible with the replacement host and I wish they would bring back the Poorman, but that does not appear to be a likely possibility now that so much time has passed.

I would appreciate any info on where the Poorman is working these days. I heard he was doing some cable TV work for a while but was never able to locate him.

Hey Dudes,

I'm Pascal Standaert, PD and radio freak in Flanders Belgium.

I am wondering if some of my USA collegues (radio freaks) would do me a favour and tape some stations in their neighbourhood.

I would be happy to send over some blank tapes, you fill them with a station (preferrably CHR or AC) and send them back. (no need to edit them, just put the tape in the deck, press record and continue whatever you were doing)

I think these tapes will be quite educative for us here in Belgian Radio.

Send E-mail containing your location and possible stations you could tape.

If you would be prepared to help me,

Thanks

You will not be able to get more than about 3kHz reliably on a POTs line. Comrex does make equipment which enables you to improve fidelity and, if you use more than one line, increase audio bandwidth. While there have been products introduced that use high-speed modems to improve audio bandwidth on POTs, they are not yet available.

Reconsider ISDN. Perhaps not for this season, but in the future the teams in the league could collaborate for each to provide an ISDN line for the away team with the using team paying for the long distance charges.

>Does anyone live in an area where there is a medium-power FM
>broadcaster on 88.3 (or 88.1 for that matter), and a TV station on
>channel 6?

When I was growing up in the 60's and 70's, I used to spend summer vacations on Cape Cod. There was a TV 6 in New Bedford whose call letters I can't remember. However, I see from the web page ftp://radio.lcs.mit.edu/radio/tvdial.html that there is a TV 6 there currently:

6 WLNE New Bedford [Providence]: CBS (ABC switch date TBA)

(As an aside, wasn't it an ABC affiliate in the 70's?)

I poked around the web pages for radio in the surrounding areas and came up with the following:

88.3 WQRI Bristol (100 75'): Roger Williams College
88.5 WWTA Marion (19h/100v 52'): Tabor Academy

I don't remember offhand if there were radio stations broadcasting at those frequencies in the 60's and 70's, but I do recall the TV 6 signal coming in very strong and clear on my FM radios.

[Bill: My first attempt to send this failed. -- Mark]

fireweed@alaska.net (Jeremy D. Lansman) writes:

: The answer must be NO. Channel six has a band from 82-88 MHz. A station on
: 88.3 is just 300 KHz above the channel. Any radio filters out undesired
: spectrum with a band pass filter, usually in the IF circuits. The ability to
: accept a frequency, and reject a nearby frequency is the principal cost in
: making a filter.
:
The technical information is correct; however, there is at least one instance where an NCE-FM station on 88.x mHz and a TV station at channel 6 are both trying to cover the same market -- neither at all well.

In Columbia, Missouri, KCOU(FM) came on the air in 1974 at 88.3 mHz with 10 watts. Two years later, it moved to 88.1 mHz with 430 watts. This is enough to cover the portions of Columbia within a loop described by Interstate 70, Missouri Route 740, and US Route 63. This is about 75% of the present geographic area of the city.

During all this time, KMOS-TV, 60 miles or so away in Sedalia, Missouri, was on the air on channel 6. However, it was run as a lower-powered station (10 kW, I believe), merely relaying Jefferson City's KRCG-TV. KMOS' real purpose was to keep a third VHF station out of the Columbia-Jefferson City market. The KCOU moves were not challenged.

KRCG gave KMOS to Central Missouri State University in 1978 in order that it could increase its power at its Holts Summit site. When KMOS returned back to the air in 1980, at 100 kW, the station *thought* it could serve as the long-desired PBS affiliate for Columbia.

Wrong. The reasons: aside from dinky tower height (about 750'), KCOU drowns out KMOS in the core of the city of Columbia. The Columbia cable system tried to pick KMOS off the air but kept having to apply successively higher levels of filtering because of KCOU. Finally, in 1991, TCI kicked Kansas City's KCPT off its microwave relay west of Columbia and substituted KMOS. That was the only way clear reception was possible in the city of Columbia.

Now this begs the question, if CMSU were so interested in covering Columbia, why didn't it fire up a translator (K56AU was very much available at the time with the failure of KOPN(FM)'s project to relay KETC from St. Louis) to beam KMOS within the city of Columbia?

The University of Missouri already owns a TV station, commercial KOMU-TV, which is a very good, community-minded station, but its mission does not include PBS, for obvious reasons. The two smaller colleges, Stephens and

Columbia, can't afford the expense needed to build and run a TV station. (Maybe one of them could afford an LPTV, but that thought never seems to have occurred to anyone.)

The present-day situation, to use a technical term, sucks. KCOU can't increase power to serve a growing city (that loop I described earlier used to contain 95% of the city's geographic area, as recently ago as the mid-1970s). KMOS-TV can't be received within the core of the city of Columbia, including all three college campuses, downtown, and where my mom lives. If you want PBS in Columbia--a Big Eight college city--you have to get cable.

Stephens College has talked about selling its KWWC(FM) at 90.5 on and off for several years. At one time an agreement was close with the University of Missouri to buy it, but it would have become a news and talk-oriented outlet, freeing up KBIA(FM) at 91.3 to run classical and jazz all the time. 90.5 might have made a good home for KCOU (and allowed it to increase its coverage since KWWC is licensed for 1.25 kW).

So that's one Channel 6-88.1 mHz story. In this case, the FM got there first (because of the greed of KRCG-TV) and now both FM and TV stations are locked into a situation that is desirable for neither.

Well, 88.5 sure can. Just ask WXPN-FM in Philadelphia. They reached a happy solution with Philly's WPVI-TV 6 a few years back. It worked like this:

WXPN was using 1900 watts at 280 feet on 88.9, not co-located with WPVI. 'XPN wanted a power increase. Two other colleges in the area wanted FM stations of their own. So...WXPN found a way to co-locate with channel 6, and if memory serves, to actually share an antenna. By carefully controlling all aspects of both stations' transmission systems, WXPN was able to jump to 2900 watts at 280 *meters* -- and on 88.5 to boot. And THAT allowed those two other colleges (Villanova and Cabrini) to get licenses to share time on 89.1, as WXVU and WYBF. So everybody ended up happy, as far as I know.

Philly even has a 10-watter on 88.1, WPEB.

-=Scott Fybush - fybush@world.std.com=-

173. Don Vogel, KSTP

Newsgroup: rec.radio.broadcasting
Date: 1995-06-10 00:00:00 UTC
From: Wendy Vickers <vicke006@maroon.tc.umn.edu>
Message-ID: <3rdb3r$8nj@vixen.cso.uiuc.edu>
Source record: 31428

Haven't seen any other postings on this, so:
Don Vogel, the "round mound of sound, "stone blind out of his mind," proprietor of the "Afternoon Saloon", a talk show in the 4-6 p.m. drive time slot on KSTP-AM 1500 in St. Paul passed away Monday, June 5, at age 49 after a year long battle with cancer. Don was so bound and determined to keep going for as long as he can that he was on the air as late as two weeks before he died.

His show created a refuge from the pressures of the day and the controversial issues found on typical talk shows. Don was a master impressionist, a comic genius, and one of the best communicators I've heard in radio. His listeners were "the Don Squad". When he spoke to us, he created a sense of community among the listeners and took great care to see that we were all a part of the conversation and that he was giving his listeners a quality show. He was also a pretty good singer with a love for karaoke and blues.

Off the air Don was every bit as warm as he appeared to be on the air. I met him in the summer of 1993 at a live broadcast he and Tommy Mischke did together at a St. Paul Saints season opener. I introduced myself to Don and I would have been well content with simply a "nice to meet you" from him. Instead, he invited me to sit with him and for about 15 minutes before his show, he spent time talking to me about my life in Minnesota and my interest in radio and music. We were to have many other chats on similar occasions (as well as an adventure of my escorting him to the bathroom at a MN State Fair live broadcast, getting lost and making it back to the booth with minutes to spare before airtime!) and kept in touch until his death. I know I was not the only fan he extended himself too so personally.

Don also worked stints at WGN and WMAQ in Chicago and WISN in Milwaukee. He was a great radio guy and a great person. He is missed.

174. WALE Providence: Is this for real?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-10 00:00:00 UTC
From: richwood@commspec.com
Message-ID: <3rdb3s$8nk@vixen.cso.uiuc.edu>
Source record: 31429

IT>He tells me I've been selected for a rare opportunity (red flag goes
IT>up), that they are conducting a nationwide talent search (second red
IT>flag goes up) to find new on-air talent for his station. By the way,
IT>he never asked for me by name, he just called the company here and
IT>talked to me when I answered.

Tony,
You and hundreds of others have been chosen to be pitched to broker time. The rare part of it is finding success. This approach is deceptive, but the concept of brokering radio time is as old as the industry.

IT>I guess is not too bad, seeing as how it's drive-time and all). This
IT>was presented to me as a marketing opportunity; in other words, they
IT>are not offerring to pay *me* to do this, they want me to pay *them*.
IT>Now, ordinarily, I would've hung up the phone at that point, but some
IT>of this appears to have some sort of merit.

It does have merit and the price seems reasonable *IF* you have the sales team to sell your own advertising. The station will not sell for you.

IT>that, or the station simply does not exist and someone is trying to
IT>extract money from me for nothing). I have no illusions about being
IT>selected for my great personality, reputation in the computer
IT>industry, or anything else -- I'm pretty sure I was selected out of
IT>some mailing list, or perhaps even the yellow pages. I am bothered a
IT>little by the slightly sleazy approach here, but on the other hand,
IT>the deal was presented to me in more or less straightforward terms,
IT>albeit with a little bit of a sugar coat.

The station does exist and, yes, you were selected for your ability to write a check. Their approach is sleazy and deceptive. It would have been more credibile if they'd simply said they want to sell you time to do a show.ms that WALE is a 50KW station with a coverage area which

IT>Connecticut about as far as Hartford. I am wondering how a station
IT>which reaches all those places fails to have even a weak signal here
IT>in Boston, though. I understand about directional signals and much
IT>about radio propogation, and I can believe that this station is aimed
IT>away from Boston, but would a 50KW station really be impossible to
IT>hear just an hour north of the transmitter? That seems to me to be a
IT>tad unlikely, but I dunno.

If it's the station I think it is (the old WLKW) it has a very tight directional pattern. If Boston is in one of its nulls, no signal will reach there.

IT>the master tapes after each show airs, and the station does not own a
IT>thing. So even if no one listens to the show, I'm getting 13 hours of
IT>studio time, production assistance, engineering, etc. for my money.

If you can sell your own time, it might be a good deal for the
Providence market - not Boston. Otherwise, it'll be a great way to lose
$3900.

IT>1- Has anyone heard of WALE? Are they a professional operation? Do
IT>they have "real" programming, or does all of it consist of poor
IT>programming by amateurs who have essentially bought air time from
IT>these guys?

Bingo!

IT>2- Does this pitch sound familiar? Are other stations doing it?

The pitch isn't familiar. It's deceptive. The brokering of radio
time is.

IT>presume this is *not* a typical way of "finding new talent," as was
IT>suggested to me. Am I right in being skeptical?

It's not typical to find talent this way.

IT>3- Am I being offerred a good deal? A shady deal which may work on my
IT>behalf if I do well? A bad deal which will rob me of my $3900 and
IT>leave me with not much to show for it? Is this radio's equivalent of
IT>vanity presses in the publishing industry? Are the numbers too good
IT>to be true? They seem that way to me, which strongly suggests I'm

It's exactly the same as a vanity press. It's a good deal if you can
sell it yourself.

Rich

WALE in Providence, RI (ex-WLKW) DOES have a 50,000 watt signal. But, most of your audience better have flippers and dorsal fins. It aims right into the ocean. There is NO signal to speak of, here in the Boston area. Forget Worcester and Central Massachusetts. The daytime signal DOES cover Providence and selected environs. Unfortunately, this station simply does not cut the mustard. The nighttime signal is pitiful. I have been able see the towers on the way through Rhode Island at night....but barely able to decipher the programming due to skywave propagation from WCMF(AM) and the Montreal station on 990.

WALE is a real radio station. It's the former WEAN 990 AM, which before that was WLKW. I used to do contract engineering work for them under their previous owner. I can tell you that they really are a 50,000 watt station, and you can't hear them in Boston because they have a directional antenna which isn't allowed to radiate much power in this direction.

The only problem is, at night they only run 5,000 watts, and when I worked there you couldn't pick them up very well after sunset even in Providence-- their transmitter is about 20 miles northwest of Providence, by the way.

So if you do decide to accept their offer, insist on a _daytime_ slot.

I can't say whether the deal they offer you is a good one; I am a strong believer in radio's power to generate business, and if you run a consulting business and want new customers I'm sure a radio talk show would work nicely.

You could also syndicate the show to other radio stations, although if you're new to the radio business I wouldn't recommend it; the competition is fierce and a top notch talk show takes a lot of time and hard work to produce.

A friend of mine has done contract engineering for the _current_ WALE owner. Also, I believe our news director here used to work for them when they owned the New Bedford WALE. I'll see what I can find out.

>He tells me I've been selected for a rare opportunity (red flag goes
up), that they are conducting a nationwide talent search (second red
flag goes up) to find new on-air talent for his station.

Snip, snip....

"and what exactly have I done to earn this honor?") he sort of
mumbled something about our name being selected by their market research
people, blah blah blah (third red flag).

Snip, snop....

>they want me to pay *them*. Now, ordinarily, I would've hung up the phone
at that point, but some of this appears to have some sort of merit.

OK... no this has never happened to me, but I would like to comment.

You were good to spot the red flags!!! Congratulations!

First... they want YOU to pay them, but YOU don't get any pay from them?
If I was offered that kind of a deal, I'd say "No way, Jose..." and
hung up the phone. I don't care how much ad time they are willing to
give me. I will not do a show for free, that requires me to pay the
station for airtime / services.

Secondly... if you take this deal, would you be giving up anything at your
current job? Would you be forced to give away time for your current job,
to do this show? If your answer is "yes", I'd call that reason number 2
to say no to the offer.

Third... Did you Get this deal in writing from the station? Have they
offered you some written documentation that states EXACTLY the
same thing they told you over the phone? If not, but you do indeed
want to do this, GET IT IN WRITING!!! And it needs to be signed,
preferrably by the stations' owners/managment, and programming
department. I pray that the guy who called you, does not serve in all
three of those capacities.

And fourthly... Market and talent research...? I don't see the connection
here... Are they just out of the blue trying to come up with programing that
they "hope" will appeal to listeners? Or have they shown you written
documentation that shows there is a target audience in their demographics
for this kind of show? If they are looking for talent itself... that's
what air check demo tapes are for...

I mean hey... radio programming is a gamble... But for the host to spend his/her own money without being paid in return, seems a lot like playing with fire to me. The only party that needs to take the gamble, is the station itself. You should do the show, they should pay you, and if the show fails, it's not your loss, it's theirs. I believe that's how radio works, just as it does with music formats.

I'm calling this one a scam....

Keep us posted on what happens hereafter!!!

It sounds like they have come up with a novel approach to selling air time. I'm sure that if they plainly said, "We are a broker time radio station and we want you to buy time from us", you would have hung up the phone immediately.

> was presented to me as a marketing opportunity; in other words, they
> are not offerring to pay *me* to do this, they want me to pay *them*.

That is how broker time works, I'm a veteran time buyer so I might be able to answer general questions.

> Along with my one hour show each week, I get 10 60-second spots each
> week to advertise my company, plus six thiry-second promos for my
> program. Plus, let's not forget, an hour in drive time each week to
> do whatever I want. For this package, I am asked to pay $300 a week,
> a total of $3900.

The promotional spots are an incentive when you consider that most broker stations charge extra for them. A $300/hr charge is in the ballpark for a daytime cost on a straight broker station. All you're buying is the air and studio time. To make money with this kind of deal usually requires that you hire your own board-op and sales staff to get sponsors. Also if you want to promote your show in print ads, you are on your own. If you want to originate from another location, you contract for that studio and the phone line or satellite uplink yourself.

In NY there are 50kw AM stations that have chargeback cost of $1000-$1500 per hour. These stations DO give you an engineer and the use of the sales staff, along with accounting and promotions. What the sales staff takes in goes against the chargeback and you either make up the difference or you might be lucky and make a profit. Of course if the station advertises your show, you are charged extra for it.

Some of those stations might not charge you at all BUT they wont pay you either. This is called barter, the idea is that you get part of the commercial breaks to sell yourself to make money, but the rest of the commercials are theirs and you won't see a penny of it.

> He claims that WALE is a 50KW station with a coverage area which

I know a 50kw station who's nighttime signal is almost nulled to it's part of it's city of license and disappears from the southern subburbs.

> Oh, the final point he makes is that I own this programming. I get
> the master tapes after each show airs, and the station does not own a

> studio time, production assistance, engineering, etc. for my money.

As the time buyer you are the producer and therfore the owner of the program. Be careful with what they mean by production assistance and engineering. If you've never been on that air before production assistance may mean the instructions you are given on how to operate the board and lists of FCC regulations and station policies you can't violate.

Engineering may only mean that he starts and stops the aircheck tape and gives you on and off the air cues. Prerecording and carting of commercials is usually included as part of both production and engineering since the engineer does the editing and dubbing.

> For my part, I've verified that the station does exist (or at least
> that it's been listed both in the phone book and in lists of broadcast
> stations for several years). When I call the phone number, actual
> people answer (not just the guy who called me -- I've heard at least
> three different voices at various hours of the day and evening), so if
> it's a con operation, there are several people involved.

Broker time stations do exist and unless they are located in the dust bowl or managed by very greedy or totally inept people, they are healthy operations, even if run on a shoestring. They take no risks, they only offer airtime to individuals and companies that want to promote their business or have an ego they want to set loose on the public. In most markets, there are plenty of people willing to buy the time.

> 1- Has anyone heard of WALE? Are they a professional operation?

Never heard of them myself, but I'm in NY. Most broadcasters do not consider broker stations to be professional at all. With AM radio in the dumpster, it is a viable alternative and is getting to be accepted, it

only took 30 years since the concept started.

> Do
> they have "real" programming, or does all of it consist of poor
> programming by amateurs who have essentially bought air time from
> these guys?

Many time buyers are of the no talent variety, but again, some pros, not able to get on the air any other way do to the glut of people in the business are going with charge back stations.

> 2- Does this pitch sound familiar? Are other stations doing it? I
> presume this is *not* a typical way of "finding new talent," as was

Their approach is new, but the product is old.

It sounds fair, but look at the time slot they are offering. Not that great unless you broadcast something that will get MIS Managers and DP professionals to take the long way and get into work late the day you are on. That is more of an on the air approach then content. It is also important that you also gear the show towards the Providence market, it is not excatly the same as Boston.

> 4- What is the value of a sixty-second commercial spot in prime time
> on, let's say, an average-rated radio station in a middle-to-high-end

> quite a bargain to me, but I don't know. Hell, if I'm paying just for
> the advertisting and each ad is heard by even fifty people, it sounds
> outrageously cheap. Am I missing something?

This is where you have to study the station's demographics. Off hand, a regular broker station has none. The slots are filled by whomever the next one on the list is. That could mean that a Rap music show might replace an ethnic program of Greek language talk and music. In some cases the station may want to do block programming, like business related shows during morning drive time. If you could assure that your spots would run during that time period, then it makes sense.

> 5- In general, assuming this is on the level and assuming that I could
> pull it off and produce some sort of quality programming, is there any
> reason I shouldn't take advantage of this?

It may be advantageous if your business can support the market the station serves. It would not be condusive to try to sell computer goods or

services to someplace that might not be a short commute away. As you probably already know, your clients want problems solved YESTERDAY, add a minumum 1 hour delivery time and you could be just spinning your wheels.

If you get sponsors in a similar line of work in that market to go for most of the bill, then it might be worth it, but it still would not be anvantageous to your own business.

As I understand it, WHTK (owned by Lincoln Group) has a joint sales agreement with WHRR 93.3 "The River" (recently sold by Lincoln Group back to Bob Savage), but Imus is not a simulcast per se.

Incidentally, the 1280 signal is not as bad as people make it out to be. I have a bit more trouble driving at night with WBBF-950, which has to protect Utica and Detroit, among others.

The relationship between HTK and "The River" is interesting.
They were once sisters in the Lincoln Group, as Clarke Ingram
points out...that had to be dissolved when Clarke's own station,
98 PXY (a MUCH stronger outlet both signalwise and audience-
wise) came into the group. People tell me they still have some
working agreements for production and sales, but otherwise it's
an arms' length relationship.
Actually, since Avon's not in Monroe County (the core of the
market and metro) Bob Savage can have the best of both worlds.
He can be IN the Rochester market in terms of coverage and
ratings, but claim a certain distance from it in terms of program
acquisition/exclusivity, depending on what the individual syndi-
cator's policies are. Infinity sells Imus; they set the terms by which
the show's dfistributed. Evidently they either don't sell Imus ex-
clusively or they define the exclusivity zone very narrowly. Savage's
group wins if "The River" attracts Imus listeners in solid numbers.
Lincoln wins to the degree it gets a cut of the revenue through its
sales agreements. WHTK, as a station, probably loses big in the
Arbitrons even though its operators don't, as it has all along be-
cause of its very limited nighttime and early morning coverage
(especially in winter, when it has to null out about 3/5 of the mar-
ket until past 7:30 in the morning). It's really a waste of 5,000
watts with the pattern it runs (mostly north into the lake and in a
narrow southward band along I-390). If they can't spread out their
nighttime signal to at least cover the eastern suburbs (as our sta-
tion did a few years back) they might as well take it dark, sell it
to whoever will take it off their hands for whatever little they can
get for it, or give it to a college or university and take the tax
writeoff. The latter course would probably pay them the most on
the bottom line in the long run.

WRC in Washington (known to the FCC as WWRC-AM and to
its small cadre of listeners as WRC-AM 980) has the help wanted
sign out again...this time for a program director.
Radio and Records says it was the result of Gary Burns' resig-
nation following a heated discussion with the station's management.
Sources inside the station have told me this was not the first such
blowup...that tensions had been high for some weeks, ever since
before the controversial arrival of Oliver North to do afternoon drive.
(No data in yet on how well or poorly Ollie is serving 'RC...the jury
will be out for a lot longer than it was when Ollie was convicted of
lying to Congress...)
To give you another idea of why the station continues to play
musical PD's...winter numbers were blah, and a recent article on the
Washington radio market in Radio World magazine didn't even men-
tion the station ONCE in the body of the text---even though it's edited
in Washington and the editors presumably know it exists. It's become
that small a factor in the market. It deserves better.

186. ADMINISTRIVIA: Posting Arbitrons

Newsgroup: rec.radio.broadcasting
Date: 1995-06-10 00:00:00 UTC
From: rrb@clm.aiss.uiuc.edu
Message-ID: <3rdb2t$8l2@vixen.cso.uiuc.edu>
Source record: 31495

Hi

It is important for all who post the Arbitron ratings from their market.

Arbitron ratings are vigorously protected by copyright and they do go after violators of their agreements. At least two posters to this forum have been contacted by Arbitron about the posting of, what Arbitron seems to feel are, protected rating numbers.

It seems that Arbitron does allow newspaper and trade publications to print the general 12+ numbers and in some cases the top 10 drive numbers. However the 25 - 54 and other breakdowns seem to be more vigorously protected, as do the 'Arbitrends'.

Until I personally hear otherwise, I will continue to post 12 + numbers as long as...

1) The post credits the source (i.e. name of source publication...)
2) The post includes a line stating that the numbers are used by permission of the publishing source.

Arbitron seems to be in the process of determining if rec.radio.broadcasting and AIRWAVES RADIO JOURNAL meet their criteria of 'The Press'. Since rec.radio.broadcasting is officially a 'news-group' and since AIRWAVES is also officially a "trade publication" I believe we do meet such criteria, but I am unwilling to be the test case for that belief. It is my belief, and I feel the consensus of the group as I see it, that these numbers are used, primarily, as a way to track the relative popularity of formats in *other* markets, rather than a way to bypass subscribing to Arbitron or to deprive them of their just renumeration for services rendered.

Since out-of-area ratings are readily available, the posting of those generalized numbers to this newsgroup is a service to the radio broadcasting industry as a whole and as such should be allowed.

I would welcome clarification on this point and would gladly work *with* Arbitron in any way possible to both satisfy their justifiable desire to protect their bread-and-butter, and at the same time allow the radio broadcasting community at large to view those generalized numbers that are widely available in other medium, such as local newspapers and other trade publications.

So for now, please post *ONLY* the 12+ ratings, and if published in your area, the AM and PM drive top 10. Always credit your source and include a 'used with permission' line in your post. As to how far you choose to go to *obtain* permission is up to you. I am just covering

my virtual butt as much as possible.

DO NOT post anything but the 12+ and drive time top 10. Don't post the TRENDS, although I believe excepting from them is OK, to make a point.

Copyrights are a big deal in the information age. Arbitron is vigorous in covering its butt, so should we. Steve Kurzman from Accuratings has told me that his firm doesn't mind the posting of the general numbers. I imagine it is a form of publicity.

Any ratings posts that include more than the 12+ and drive time top 10 will be returned to the poster. I will post any clarifications I receive on this matter.

Thanks

William Pfeiffer

This is becoming embarassing....

You are never going to believe which station is trying yet another new morning team. WKQX-FM (101.1) is at it again. In the wake of the departure of Heidi Hess as news anchor, the station has brought in Lance Tawzer and Doug Stoll (who go by the names Lance and Stoley) from the alternative rock group "The Lupins". Brooke Hunter, who currently is on evenings joins Lance and Stoley handling the news. Robert Chase, who had been on mornings since the firing of Bobby Skafish returns to the evening slot he held before Brooke. Now taking bets on the over/under line for how long the Lupin boys last. Line is at 8 months. By the way, Heidi Hess has resurfaced in Miami as midday host and music director.

Also, continuing the tradition of morning shows which can't settle on players, Kevin Matthews of WLUP-FM (97.9) has switched news anchor/sidekick. Cara Carriveau, who had come over to Kev's show two months ago is looking for gainful employment. Cara is replaced by Peggy Kusinski who had been a sports talk host/anchor on cable television station CLTV (Chicago Land Television). Dorothy Humphrey will continue as traffic reporter on Kev's show.

Nominations.....

The National Association of Broadcasters recently announced its nominees for the Marconi awards. Chicago broadcasters/stations nominated include:

WJMK: Oldies
WLS-AM: News talk
WBBM-FM: Contemporary hits
WGCI-FM: Urban

Bob Collins (WGN-AM) and Johnathon Brandmeier (WLUP-FM) were nominated in the "major market personality" category. The awards will be doled out in New Orleans in September.

Sad Note:

Don Vogel, Chicago radio personality at a number of stations including WGN, WIND and WMAQ passed away after a battle with bladder cancer. Don, who was blind, was working at KSTP-AM in Minneapolis.

The name game

Tom Kapsalis, afternoons at WBUS-FM (99.9) can also be heard weekends on WTMX (101.9). However, Tom is known as Tom "K" weekends.

Kent Gustafson, VP and GM of WNVR-AM (1030) and WKTA-AM (1330) can be heard weekends on WRCX-FM (103.5). Kent goes by the name "Goose" although he had

gone by the moniker Chris Ryder when working on WWBZ, the predecessor to RCX.

Moving on up...

Doug Banks is going national. The top rated afternoon host at WGCI-FM (107.5) will be moving to Dallas. He is expected to begin his syndicated show in January of 1996. WGCI will be picking up the show.

Doug's producer, Karen Lightfoot, will be moving to WVAZ-FM (102.7) to produce the morning show at the station. The morning show features John Monds, Bennie Deshong and George Willborn.

Red Muldoon takes ove mornings at suburban WABT-FM (103.9)

Fergie Jenkins, currently the pitching coach for the Chicago Cubs, will be a regular contributor to WMVP-AM (1000) for the rest of the baseball season. Fergie will preview the Cubs and their opponents before each series.

Joe Bartosch takes over the spot vacated by Ross Perot on WGN-AM (720) Sunday nights at 7 pm.

Dan Kieley, former marketing director at WBBBM-FM, takes over as program director at Minneapolis station KDWB-FM.

Moving on out....

Rich Higgins has left his overnight shift at WYSY-FM (107.9)

Lorna Gladstone, former program director at WGN, has resigned from Detroit station WDFN-AM.

Saul Foos, who cost clients millions of dollars with investment scams, has been sentenced to 5 1/2 years in the pokey.

Boys will be boys until someone threatens a lawsuit they would win for defamation of character.......

Finally, Evergreen personalities Danny Bonaduce and Mancow Miller settled a disagreement. Mancow read an on air apology for comments he made regarding Danny's child. Mancow also donated $5,000 to Catholic Charities in the name of Danny. Danny agreed to drop the topic.

Here's what is happening in the 15th market:
San Diego, San Ysidro, La Mesa, Wild Animal Park,
and Carl's Diner and <blink>Brewery</blink>

KBNN-FM, Julian, 100.1 and packing it with 48 watts
with a 2500 stick, is now known as Klassy 100. I
noted the change about two weeks ago; and today's
Escondido Times Advocate radio guide gives more
insight. The hope is that the station will appeal
to North County San Diego listners after [former]
KJQY switched formats from AC to RockMix.

KBNN has been noted in my posts; and especialy by
sports writers in SD county, about broadcast of local
high school games. [I believe it's the only station in
southern California to do this!] In some areas of
North County, it is the only station that can be received
decent. The terrian along the I-15 corridor is not receptive
to FM broadcasting from SD/Tijuana. But 100.1 shines
through.

I'm encouraged that the local owners give community service
[with local high school sports]. KBNN is licensed to Julian,
and offices/studios in Ramona.

Coffee Crew: KKOS' morning drive to give away a great
cup of coffee, paper and danish occured this morning in Carlsbad.
The Carlsbad station is awaiting the final word to move from
95.9 to 95.7 and UP power and increase coverage. It is supposed
to happen by mid-July.

KBZT, [94.9, SD] was at the Encinitis train station giving away
orange juice, danish and a cassette tape to Coaster train riders
too. [and as a regular rider of the train, my brief case over
floweth with goodies today!]

Items I've found on the web this week:
The Art Bell Home Page http://artbell.com/art/
http://www2.primenet.com/~keithr/artbell.html

NAB's on line newsletter:
http://www.nab.org:80/on-line/files/onlin.htm

Carl is exanding the diner and is making his first batch of
SD premium ale. Samples will be sent with every requested
San Diego radio log. Let me know if you want an ASCII or
HTML format.

189. Toronto radio ratings

Newsgroup: rec.radio.broadcasting
Date: 1995-06-10 00:00:00 UTC
From: talk1370@aol.com
Message-ID: <3rdb2v$8l8@vixen.cso.uiuc.edu>
Source record: 31498

Reply-To: talk1370@aol.com (Talk1370)

The Bureau of Broadcast Measurement has just rolled
out the spring 12+ numbers and 25-54 rankings for Toronto
(which is not only Canada's #1 market but one of North Am-
erica's top 10).
Here's how it shakes down in 12+ audience share;
Station & Rank Format 12+ Share
1.CFRB (AM) news/talk 11.8
2.CHFI (FM) AC/gold 11.1
3.CHUM-FM hot AC 7.0
4.CILQ (FM), "Q107" AOR 6.5
5.CKFM(FM),"Mix 99.9" hot AC 5.6
6.CBL (AM) news/talk, public 5.3
7.CISS(FM) country 4.9
8.CFNY(FM) alternative/new rock 4.3
9.CHUM-AM oldies 4.1
10.CFMX(FM) classical 3.7
11.CHOG(AM) CHR 3.5
12.CHEZ(FM), "Z97.3" soft AC 3.3
13.CJCL(AM), "Fan 590" sports 2.8
14.CBC-FM classical/fine arts 2.6
15.CFTR(AM), "680 News" all news 2.5
16.CJRT(FM) community, public 1.0

Stations under the 1.0 threshold 12+ include CJBC(AM), CBC French
language; CHIN AM & FM, multilingual; CIAO(AM), multilingual; CKYC(AM),
country; CIUT(FM), University of Toronto community/educational; a number
of low power community FM stations; and suburban AMs licensed to
Mississauga, Ajax, and Oshawa whose signals do not cover the entire
Toronto market because of restrictive directional antenna patterns.
Listen-
ing to out of market stations, and to out-of country signals from Buffalo
and
Niagara Falls, NY, is also excluded, although out of market listening is
believed to be considerably less of a factor now than it was a decade or
two ago. (Ironically, Toronto market stations DO often appear in the
Buffalo
and Rochester Arbitrons, though almost never in those markets' top 10.)
A few observations;
---CFRB has regained its top spot, but its long term trend still looks a
bit
soft. It's down a good 2 points in 12+ share from its position just a
year
or two ago, when it could count on a 13 or 14 share without even

breaking
a sweat. #5 ranking 25-54 is not bad, but that will need to improve if
the station wants to stay on top. The station's host and topic lineup
seems to skew a little old to accomplish that...which means it'll
either
have to retool again soon, or face new format competition.
---CHFI didn't hold on to its #1 ranking 12+ from the fall but it stayed
in
double digits and consolidated its hold on the 25-54 lead...meaning
it's
a real contender, and its surge in the fall was NOT a fluke.
---CHUM-FM has nothing to feel bad about, since it has maintained its
overall share and strong #2 position in 25-54...the music mix seems a
little brighter lately, and that may strengthen it further.
---The AOR stations, Q107 and CFNY, are inching upwards, but you won-
der why they aren't doing still better---until you listen to Mix 99.9
and
hear a music mix that's adult contemporary but skirting VERY close to
the border with AOR. That's an extra 5.6% of the market which in many
cities, would probably be listening to AOR (and probably to a station
like Q107). The Mix is not a typical AC, and if it weren't there, Q107
would be the big beneficiary---if you add the two stations' shares
together and assume Q107 gets that entire audience in the absence
of any other mainstream/classic AORs in the market, Q107 would
be number one 12+ with over a 12% share.
---Music is disappearing from the AM dial, even though listenership is
clearly still strong for the various spoken word formats you find
there.
Only one of the top 10 stations in the market, CHUM-AM, is still play-
ing music on AM. Its performance is a tribute to good execution
of the format, combined with a lot of "brand loyalty" among baby
boomers who grew up with CHUM on 1050, and still tune to it to hear
the very same music they heard at that spot on the dial 20 or 30
years ago. (Wonder if they'll bring back the Grooveyard show?) CHOG
can't even crack the top 10 in either 25-54 or 12+ despite a CHR for-
mat monopoly. CKYC couldn't make it with a format monopoly in
country on 590, and its continued presence on 1430 (or at least it
was there a couple of weeks ago, last time I checked) is just a
holding action to keep the channel active until a sale to a
multilingual
broadcaster gets CRTC approval. That tells me that music on AM
won't be around much longer, even on those holdouts that are still
drawing an audience now, unless adoption of an in-band/on-channel
digital system like we'll probably get in the USA gives the medium
wave band a new life. CHUM's doing well with oldies on AM. But with
CFRB vulnerable and slipping, and no other commercial talk compet-
ition, how much longer will they be able to resist flipping it to a
harder-edge, higher-energy personality talk format?
---Fan 590's poor performance may be a function of the shaky season
and late start of the Maple Leafs, and the absence of major league

baseball...it will be interesting to see if the return of baseball to something closer to normal, and a full NHL season in the fall, helps them come back.
---Current CRTC format regs are the only thing preventing SOMEONE in the market from flipping his FM to a CHR format, and if and when those regs are loosened up, watch out. AC is an overpopulated format, so one of the ACs may take up CHR as soon as the regulators will allow. (In a loose regulatory environment like we have in the US, it would probably have happened a decade ago...in my home market the top CHR has been on FM since 1982, and the same has been true in Buffalo since WKBW stopped the music in 1986.) Of course, format deregulation could unleash a stampede of change that might leave the market almost unrecognizable... just like it's done in big markets in the US. I leave it to you to decide whether or not that's a good thing... I have my doubts.
Bob Smith, middays WXXI-AM 1370 Rochester NY

190. West Palm Beach latest numbers...

Newsgroup: rec.radio.broadcasting
Date: 1995-06-10 00:00:00 UTC
From: mikedow@gate.net
Message-ID: <3rdb31$8la@vixen.cso.uiuc.edu>
Source record: 31499

Winter numbers for West Palm Beach...

1. WRLX Easy Listening 8.3 7.1
2. WIRK Country 8.1 7.4
3. WRMF Personality AC 7.1 8.9
4. WJNO-AM Talk 7.0 5.5
5. WEAT Lite AC 4.6 7.6
6. WKGR Classic Rock 3.4 5.4
7. WBZT-AM Talk 3.3 2.4
8. WOVV CHR 3.2 3.1
9. WEDR Urban 2.9 3.0
10. WJBW Nostalgia 2.4 1.3

The was the first time WRLX topped the market since turning Easy in October 1993. Big drops for CR WKGR ("the Gater) and WEAT ("Sunny 104.3). Z-Rock WPBZ also dropped from 6th place while WBZT, with Ruch and Imus gained.
Tenth place WJBW is one of the more interesting stations on the dial. The station is located in suburban Jupiter but seems to broadcast from Boca Raton. The music is a very interesting and eclectic mix on the best of the swing era. (I'm only 33 but I have a button set for it!) They don't run many spots but they do sound great.

191. Re: Carts and Digicarts

Message-ID: <3rkrv6$j3f@vixen.cso.uiuc.edu>
Source record: 31351

I was rummaging through the public on-line FCC info, and discovered that their AM database is now on-line. It is in the same directory as the FM info, but the main data file takes over 17 megabytes, not the 8+ of the FM data. This is likely because of the directional patterns AND because it claims to include all AM stations in Region 2 (the Americas). I have not downloaded the data to see for myself.

Happy DXing.... Bob Carpenter w3otc@amsat.org

[Moderator's Note: I understand that the FCC is going to offer this file in GZIP, which should redice the size to about 1/6th the uncompressed size. Bill]

193. EBS / EAS Question

Newsgroup: rec.radio.broadcasting

From: RobABass@aol.com
Message-ID: <3rkrv8$j3h@vixen.cso.uiuc.edu>
Source record: 31352

I have a very interesting question reqarding the tone lengths for the new EAS system. As I understand it, come this July, we can shorten tones down to 8 seconds, for the TESTS, but we must still use the 22+ tone for an EMERGENCY.

With that in mind... why are a lot of you running around and modifying your current EBS tone generators, to emit an 8 second tone? You are still going to need the 22+ second tone for emergencies How do you expect to get a 22+ second tone out of a generator that is only emiting an 8 second tone?

Why not just leave the generator alone, and tell your jocks to fade / close the channel after 8 seconds (or hit the abort switch on yoiur tone generator, if you have one)?

I am actually quite surprised this question hasn't surfaced yet, and we are just a couple of weeks away from being allowed to use shorter tones during tests. I would love to hear how you all will operate the revised EBS system, starting in July.

>the true story?

grabs rulebook

Lessee... 73.961 Tests of The Emergency Broadcast System Procedures

Nothing about a legal id in there.

grabs EBS checklist

Step 1. Discontinue normal programming.

Step 2. Broadcast this announcement.
(script omitted for brevity... you _should_ have this book in your control
room)

Step 3. Transmit attention signal.

Step 4. Broadcast announcement.
(script snipped for brevity... hey you know it by heart anyway)

Step 5. Resume Regular Programming

Step 6. Record time transmitted in records/logs

Step 7. Record time test received via EBS monitor/reciever.

That's it. You win.

I have located a source of FCC/ANSI/OSHA non-ionizing radiation warning signs. Up to this point the primary source for the "yellow triangle" ANSI/FCC non-ionizing radiation warning signs was the National Association of Broadcasters in Washington DC. I received a catalog in the mail from EMED Graphic Communications (800-442-3633). They carry an wide assortment of the signs (adhesive sticker, plastic steel, aluminum) and the prices run about 30% lower than the NAB. They also carry non-ionizing radiation signs that meet OSHA regulations which the NAB does not have. Another plus: EMED will ship COD (something the NAB refuses to do).

I was at the FCC for six years and during that time the Field Operations Bureau certainly did station inspections both on their own initiative and as a result of specific complaints. Over the last ten years FOB has undergone many "changes" including their name. One of the more significant happenings was the diversion of resources away from field operations into almost every other area of the Commission. There were times when some field offices literally did not have enough money for gasoline for their government vehicles. I believe that the frequency of inspections dropped during that time and that FOB personnel were diverted to other tasks. As a former FCC official who worked closely with the FOB personnel both in Washington and in the field and as a current radio station owner, I feel that this office has always given good service to broadcasters and performs duties which directly benefit stations' bottom lines. A short answer to your question is yes they do inspections, but on what schedule and with what frequency I'm not sure.

Scott is making a splash in the Bay Area. Unfortunately, I don't know his numbers, but he *is* the talk of the town, has had several stories written about him in the local press, etc. I don't follow KNBR, but yes he is on KNBR. I think he's afternoon drive, but I'm not certain. It's probably a mark of his skill that I'm familiar with him and his style though I'm not even a sports fan.

204. Gino Michelinni get KFI try-out

Newsgroup: rec.radio.broadcasting
Date: 1995-06-13 00:00:00 UTC
From: "Harvey M. Spencer" <hmspencer@ccgate.HAC.COM>

Source record: 31363

Long time Los Angeles KLOS-FM 95.5 rock jock, Gini Michelinni, did a talk show on KFI-AM 640 last Sunday morning. He had been off the air since becoming a casualty of the recent change in personnel at KLOS-FM. He had been doing the early afternoon show for about 20 years, becoming semi-famous for his 5 o'clock funnies, where he showcased a 5 minute recorded standup bit from a comedian, usually with a plug for their up-coming appearance somewhere in the LA area. He had been a rock institution until the station decided they wanted to sound like grunge-rocker KROQ 106.7. The reason for the house cleaning of old rock jocks was that "We have to have DJ's who at least come up to the intensity of the new music we will be playing (Soundgarden, Nirvana, etc.). His talk show host debut started out rocky, as he was having trouble with the equipment, not quite knowing how to put callers on the air. He started the first hour with a call for listener advice on problems he was having with his girlfriend. Not too interesting. The second hour was devoted to discussing whether Magic Johnson should come back and play basketball for the Lakers. Unfortunately, KFI is not a sportstalk station and it showed. Don't know if Gino passed the audition or not but I guess he is better than the re-runs of Rush Limbaugh that KFI had been playing in that time slot.

I am writing one as we speak! It is a database of equipment, tracking cost, supplier, date in service, maintenance history, parts history, and more. Report capabilities too. I hope to have a preliminary beta version in a week or two. Let me know if you would like to test a copy. Also, any suggestions of additional features will be included if possible..

206. Mario Cuomo National!

From: rsemenof@gpu1.srv.ualberta.ca
Message-ID: <3rks03$j5u@vixen.cso.uiuc.edu>
Source record: 31366

[Moderator's Note: I know this was discussed recently, but this poster missed the info and needs it. Can you direct all replies TO the POSTER and not the group, since the thread is recent and probably should not be repeated this soon? Many thanks. Bill]

Hello All!

I'm just wondering if anyone out there in radio land is using MD machines in place of conventional cart machines.

Which brands are popular?

What are the pros/cons of MD vs. DigiCart vs. mag. tape cart?

Are the machines reliable enough for 24 hour on-air use?

What (if any) preventative maintenance is necessary for the machines?

We here at CJSR are looking into purchasing 1 recorder/player for our production studio and 1 or 2 playback only units for on-air studio use. Is one machine enough for on-air studio use, or is 2 (or even 3) machines more desirable?

All responses are appreciated!

208. Management reorganization/Minnesota Public Radio

Newsgroup: rec.radio.broadcasting
Date: 1995-06-13 00:00:00 UTC
From: VBREMER@murrow.mpr.org
Message-ID: <3rks04$j61@vixen.cso.uiuc.edu>
Source record: 31367

Following the reduction in force of 36 employees at Minnesota Public Radio, the company has now announced a management restructuring and the elimination of two Vice Presidents from the management of the company. MPR President Bill Kling announced the management downsizing at an all staff meeting in St Paul today. Vice President for Broadcasting Vic Bremer and Vice President of Marketing and Community Affairs Ginger Sisco will leave the company.

Kling indicates that the Broadcasting Division, National Programming Division, and the Network Stations Division will be merged into one operating unit headed by Dennis Hamilton, a 20-year company veteran who had been the Vice President of Network Stations. The Marketing and Communications division will be merged with the Development Division of the company.

The departing Bremer had been with MPR for 5-years. The departing Sisco had been with MPR for 4-years.

Switching from the 3rd person...I've enjoyed reading Airwaves for the last few years. I'll be losing my e-mail address on Friday...if I get a new one soon I'll join you again.

Know of any good jobs?

Thanks.

Vic

Like the writer from western MA, I also heard strange signals come over my radio dial last Tuesday here in central NJ between about 4-7pm. I was listening to Rocky Allen on WPLJ (95.5FM/NYC) when it phased out and some urban station came in. A traffic report talked about I-95, US 1, and the Roosevelt Bridge. That didn't help me since the first two could be anywhere on the east coast of the US. Then I switched to Mix 105 (105.1FM/NYC) and heard the promo "Another great music mix starts now on mix 1-0-5 point-1, Orlando. I don't know what causes this, or how often it happens, but I would be curious to know.

: 88.3 is just 300 KHz above the channel. Any radio filters out undesired
: spectrum with a band pass filter, usually in the IF circuits.

In Portland all the lower frequency FMs moved to KOIN's tower in Sylvan Heights, including a newish station, KBVM, 88.3. From what the people at KBPS-FM (89.9) told me, they specifically did this so that the signal mixing could be controlled at its source. The result is flawless FM in the 88-92 portion of the band. As I recall, KBVM, KBOO, KMHD, KBPS, and another I can't remember are all on the same bay.

Here in the New Orleans area, there is a TV station on channel 6, WDSU, our NBC affiliate, and on 88.3 F.M., there's WRBH, a radio station that carries spoken word programming for the print handicapped. WRBH doesn't put out alot of power, and I, even without cable, never had a problem with interference on either station. I have heard that some people in other parts of the city, mainly those who have older TV sets, have reported some interference. WRBH has been on the air for several years now, and is still on it's same frequency, right next channel 6. I hope this answers your question.

Reply-To: tony@bosauto.com

Hi again, all.

I wanted to thank all the folks here for all the info in respone to my queries about WALE in Providence and their attempt to solicit money from me. I just wanted to report back on what I've found, in case anyone is curious.

Actually, most of what I found out was contained within replies already posted here, though some came in E-Mail messages, and I though I'd summarize here rather than try and figure out which information came from where.

So, here are the facts: WALE does really exist, and really is a 50KW station by day and 5KW by night. Its signal is extremely directional, completely nulled up here in Boston and in quite a few other populated places. Its transmitter is actually located well Northwest of the city of Providence, and at night you can't even hear the station in all parts of downtown. Last Friday evening, I took a drive down that way and listened to my car radio. I was barely able to hear the station at all; in most places (even some within the Providence city limits) the station's signal was well covered by an all-sports operation in Rochester, NY (didn't get the call letters). As to coverage to the east, there is none, at least at night. I could not hear WALE outside of the Providence city limits at all, and I drove out I-195 East out to Fall River, Massachusetts and back up toward Boston. No signal at all. I presume the signal is better by day, but it's hard enough to get people to listen to an AM outlet when you can hear it all the time. This station's nightime signal is so poor as to render it (effectively) a day-only station, and this is not a good thing (especially for computer people, my intended audience, who are notorious for being night owls).

It appears WALE is attempting to sell (broker) time to all kinds of people, and that such "paid programming" accounts for pretty much everything they air. When I finally *did* hear WALE, I got to listen to about 30 minutes of some guy droning on about the wonders of manufacturered homes. His monologue was only interrupted by an occasional commercial break, during which two spots (featuring the same voiceover guy) aired -- one for the company of the "host", and one for, no doubt, some friend of his.

I don't blame the guy for being boring, mind you -- he only had one phone call in the entire time I listened to him, and the call was (apparently) from some talk show junkie who wanted to complain about

the government. I figure all the *real* talk shows in Providence have probably already barred her from the air. The ratings appear to bear this out -- I'm told WALE doesn't even show up in Arbitron's numbers, which I guess means practically *no one* listens to the station.

This is clearly a low-budget operation; listening to it feels a lot like watching cable TV late at night and being subjected to endless pitches for exercise machines and real estate seminars. Nothing interesting to say clearly translates to no audience (to speak of).

So, there will be no computer talk show on WALE, at least not one involving me. Pity, too, because I thought the idea was actually kind of interesting. I had show ideas and everything (actual shows, too, not just me hawking my wares). I actually think I could've done a pretty good job of it. Then again, I imagine everyone probably thinks that... :-)

Thanks, all, for your help, and if anyone knows of someone somewhere near Boston who would actually like to air an occasional talk program about computers and use someone with no air experience but 20 years of computer experience along with plenty of enthusiasm, a fair amount of intelligence and wit, and a charming demeanor (he said, revealing his boundless modesty and humility), ... you know where to reach me. :-)

Interesting group here, by the way; I had no idea so many broadcast professionals were on line. I may just read along here now and then for fun. Thanks again!

Well, lets try this one AGAIN:(!!)

In article <3r3oma$ap7@vixen.cso.uiuc.edu>, 76703.1034@CompuServe.COM says...
>
>
>
>Well, it's official. At midnight on Monday night June 5th, WBT (1110 AM 50kW)
>started simulcasting on WBZK-FM in Chester, SC. WBT, based in Charlotte, NC,
>is owned by Jefferson-Pilot Communications, which made the decision to
>purchase the Chester station to fill a void in its coverage area west of
>Charlotte,....

And in the process there's no local night time radio in Chester (since the previous owner had already turned OFF Chesters WGCD on 1490) and I don't know if WBZK AM 980....5000 watts DA-D has night time power. I wonder if it will be turned OFF as well?

>WBT expects to change WBZK-FM's call letters to WBT-FM. The existing
WBT-FM will receive (as yet unknown new call letters.
I wonder if WBCY, the calls before being changed back to WBT-FM for the second time are available?

Interesting note...last night on the way to Spartanburg SC from Newberry I tried to tune in WBZK-FM on 99.3, since I was heading into the null of WBT and the skywave was awful, and I wanted to listen to HI FI 50's. There was a band opening. There were 2 stations (one was WBAW in Barnwell SC) tearing the station up to make it nearly unlistenable. This was like this almost all the way up the road. I wonder if night time coverage is going to be as good as hope for?
I most certainly did make the mention of loss of LOCAL radio in these communities on my radio show and told my listeners that they need to be thankful for Mr. C....and WKDK giving them LOCAL programming and not something slammed up on some satellite.

219. WCBS-FM Radio Greats Weekend

Newsgroup: rec.radio.broadcasting
Date: 1995-06-13 00:00:00 UTC
From: searls@batnet.com
Message-ID: <3rks0j$j74@vixen.cso.uiuc.edu>
Source record: 31378

For a boy who grew up on New York Radio in its golden age of Top Forty (roughly from '55-'68 (or whenever FM started to take over), visiting New York this past weekend was a total treat. I got to hear a little (and tape a lot) of so many greats.

At one point I tuned in to hear Paul Shaffer and Joey Reynolds (a legend out of Buffalo's WKBW, who still had a major impact in NY, where you could get him at night) talking to Bob Crewe.

At another I heard Cousin Brucie talk about when he as at WINS (which I had all but forgotten).

At another, I was driving past WMCA's transmitter by the NJ Turnpike, listening to Scott Muni and Herb Oscar Anderson talk about how that station was the first to go Top 40 through the full day's schedule.

There were old jingles and live remotes and endless reminiscing.

It helped me remember that the presentation was as important as the cuisine.

My thanks to all the work that went into it, and all the people who did it.

Doc

220. CBS-FM Reunion

Newsgroup: rec.radio.broadcasting
Date: 1995-06-13 00:00:00 UTC

Many who heard the CBS-Fm reunion missed some of the best part...in the middle of the night, they ran tributes to Allen Freed, "Mad Daddy," Bob Lewis, and others from the old days at WABC, WINS, and WMCA, including clips from their work.

I enjoyed a lot of this weekend, but I was sorely disappointed with the huge amount of time they gave Charlie Greer. I grew up on WABC and wasn't that crazy about Charlie and his endless Dennison commercials back then. I also didn't understand Cousin Brucie's carrying on about Wolfman Jack. Was there supposed to be some kind of tension there? It was much ado about nothing.

The reunion weekend proved one thing for me that I've known since childhood...Dan Ingram is the greatest DJ of them all!!

BTW...for those who were recently asking about Chuck Leonard, he did an hour shift from the studios and also appeared at the Museum.

Steve -- fortunately, there are a lot of people, myself among them, who disagree with you.

I am a 36-year-old NYC student of radio media; I never got the chance to listen to guys like Jocko, Alan Fredericks, and Dean Anthony at their peak. To have reunions like this every so often is, for people like myself and others, a great blessing. I was at the live broadcast of said weekend both yesterday and today. I got to meet guys like Ted Brown and Dean Anthony and Dandy Dan Daniels. What a treat!!

So to you and to anyone else who poo poohs the idea of such reunions, get a life!!! If we lose these chances to have some terrific memories (and make some new ones), then we lose a great portion of what personality radio and culture should be all about.

Andrea

222. Burlington, VT Update, WEXP Death Watch and much more.

Newsgroup: rec.radio.broadcasting

WEXP Death Watch, The Grateful Dead, and Andy Potter Talks!

WEXP, 105.1 (AAA) will be going dark either Thursday afternoon (6/15) or Saturday (6/17) when an operational shift is made to Hall Communications' South Burlington building. WEXP has been under an LMA to Hall Commincations since March while a sale from original parent UBC goes through. When the station resumes broadcasting Monday morning (6/19), it will be under a different format - this according to a story that aired on Saturday's WPTZ News 5 telecast. Exactly what that will be at this point remains to be seen.

This past weekend, being as it was probably the last under most of the current jocks and music, all hell broke loose, formatically speaking. Saturday and Sunday afternoon listeners were treated to anything from soft Hall and Oates and Peter Cetera hit singles, to harder classic rock mainstream cuts from which the station has religiously stayed away. Basically, some jocks were just bringing in personal disks and playing whatever they felt. Frankly, it just sounded aweful!

A point of trivia in the waning days of WEXP, UBC, (the soon-to-be-ex owners of the station) REALLY stands for Unknown Broadcasting Comapny (HONEST).

(Next scheduled updates at 25 and 55, next news as it happens...)

100,000 fans can't be wrong! While WEXP gets sorted out on Thursday afternoon, A crowd of 100,000 will be gathering for a 'Dead and Bob Dylan show in Highgate, Vermont. Something of a war has ensued over who is the official station of the concert. WIZN (106.7) is, by all accounts, the 'official' station station of the show. The Champ (WCPV 101.3) and WVMX (101.7) has also been heavily plugging a presence at the show. Champ 101.3 is boasting thier own 'dead house' on or near the concert site and has even started calling themselves the 'official, unofficial' station for the show. WIZN is already broadcasting concert updates with 'traffic tips' to help things move along. Last year, there was still heavy intersate traffic fully 8 hours after the show ended. To help that situation, the WIZN (the Wizard) will have a traffic plane in the air to assist concert goers and security. Many fans will hanging around a couple of weeks as Vermont-grown band Phish plays a yearly concert at Sugarbush, VT. No one is fighting (yet) over who is the official station of that show.

Over at WKDR (talk, 1390), News Director Andy Potter has started a weekly talk show which airs Saturday middays. IMHO, Andy is the only real radio

Newsperson left in this market and real pro, too! This call-in show bears out his talent and experience very well.

For a list of staions and formats in the Burlington, Plattsburgh market, drop me an e-mail.

regards for now, Joe.

223. WMCA to 50/30kw

Newsgroup: rec.radio.broadcasting
Date: 1995-06-13 00:00:00 UTC
From: searls@batnet.com
Message-ID: <3rks0o$j7d@vixen.cso.uiuc.edu>
Source record: 31382

Anybody know if WMCA, the one-time Top 40 legend (and now a religious outlet) will actually carry out its construction permit for 50kw by day and 30kw by night?

The CP is for 6 towers, including the three already standing, on the current site just off the New Jersey Turnpike west of Jersey City. The signal would be directed mostly to the East and Southeast, across Manhattan and Brooklyn, then out to Bermuda. At sea, it will be the strongest signal coming from the East Coast (by virtue of dial position -- longer waves at lower frequencies travel farther over water).

For what it's worth, WNYC-AM shares the site with WMCA, and is diplexed on the same towers.

This would have been quite a coup for the station in its golden age.

I also hear that another legend, WADO, will also go up to 50kw, from its site in Lyndhurst, on Paterson Plank Road. Thankfully, they will keep their beautiful diamon-shaped Blau-Knox tower, which is one of only a few still in existence.

Doc

224. WOWO/WLIB deadline

Newsgroup: rec.radio.broadcasting
Date: 1995-06-13 00:00:00 UTC
From: Randy Meyer <rmeyer@CapAccess.org>
Message-ID: <3rks0p$j7g@vixen.cso.uiuc.edu>
Source record: 31383

According to a column in R&R, June 28 is the cutoff date for petitions to the the FCC to deny Inner City's plans to increase WLIB/NYC's nighttime power on 1190 kHz, at the expense of WOWO/Ft. Wayne.

The article sez the FCC has already received hundreds of letters of protest...

Think it'll matter?

I.that tensions had been high for some weeks, ever since
> before the controversial arrival of Oliver North to do afternoon drive.
> (No data in yet on how well or poorly Ollie is serving 'RC...the jury
> will be out for a lot longer than it was when Ollie was convicted of
> lying to Congress...)
>

"Tensions had been high..." Indeed. But hey, don't we all thrive on
tension? Isn't that the essence of the business? ;-)

I can tell you my tension level is 'way down after leaving. And folks
thought I was making that stuff up....Peter Laugher, where are you now....

Anybody want to make odds on where Victoria Jones will go? Word is they
haven't renewed her contract yet. That would make it 13 morning shows in
three years. It is to laugh except that it is a waste of a good 50K
signal...
mike

226. Boston Radio Watch 06-12-95

Newsgroup: rec.radio.broadcasting
Date: 1995-06-13 00:00:00 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <3rkrus$j2o@vixen.cso.uiuc.edu>
Source record: 31441

* Pyramid going, going...gone? :

Pyramid's owner Richie Balsbaugh has 6 potential bidders for
his 12-station chain including CHR WXKS 107.9FM, Churban WJMN 94.5FM,
and BB WXKS AM 1430 in the Boston market.

Among the 6 finalists, there are major players like Evergreen Media
Corp and Gannett. Apparently, Gannett has the most attractive offer
on the table which involves some sort of a stock whereby Pyramid
avoid paying high capital gains tax...

Whoever winds up with Pyramid's 12 stations would have to fork
out over $300 million. The deal is expected be closed within 2-3 weeks.
* Country going and FM talk coming? :

One of Boston's all-time favortite radio personalities from the
past was spotted at the Fairbanks' offices in the Prudential Tower
last week. Fairbanks owns C+W WCLB 105.7FM and WKOX AM 1200 in
the Boston market. 'CLB has not had much success with its current format
since dropping AC in February 1993.

Burns' visit to Boston has fueled speculation that 'CLB management
will go forward with the long-rumored flip to mostly local FM-talk.
Another semi-retired Boston talk vet, Larry Glick, has also been
contacted...

Fairbanks people are confirming that 'CLB's sister station, WKOX,
which now features syndicated country music service will flip to
all syndicated talk later this summer.

Currently, there's only one full-time 24-hour talker in the market --
American Radio Systems' WRKO AM 680.

* A new alternative? :

Rumor has it that Haverhill's AC WLYT 92.5FM might flip to
some sort of AAA format. In the last couple of months, 'LYT
added former AP WFNX-101.7FM mid-day jock Joanne Doody and
former AAA WBOS 92.9FM programming assistant/on-air personality
Mike Mullvaney(sp?). Also, music director Frankie Fox has been let go.
Eventhough, WLYT-FM is not really considered primary Boston station
it has a reasonably good reception in the metro area with 25K watt
signal. Its close proximity to AAA WBOS 92.9 FM on the dial might
also be an attempt to pick some AAA surfing listeners....

* On-air moves...:

A line-up change at WBOS :

Dick Pleasants who came to AAA WBOS 92.9FM from non-commercial side of the business at the end of last September is going back to it. Pleasants, 17-year vet on Boston airwaves, will join WUMB-91.9FM(U. Mass. in Boston) where he'll have his own show. Pleasnts will still keep his weekend folk music show on WGBH-89.7FM.

British import John 'Hutch' Hutchinson who's been doing weekends at 'BOS will take over Pleasnts' 7p-12a slot.

JoJo resurfaces in the 70s :

JoJo Kincaid who was let go from his Pm-drive show on Churban WJMN 94.5FM a couple of months ago now has the same hours but totally different set of records to play at ARS' all-70s WEGQ 93-7FM(or WCGY-FM if you still go by current Boston Globe's radio listings :-)

* New all-Sports Station finally gets new calls :

'Boston's Sound of Sports' is officially W-B-P-S AM 890 as of June 1st, but still transmitting at low power..WBPS which is an affiliate of Texas-based Prime Sports Radio is promissing to add a local PM-drive show by summer's end...

* Financial Notes :

If you're interested to see how Boston-based American Radio Systems is doing with its stock sales, check 'ARMD' listing in the Nasdaq section of your newspaper...ARS began trading its stock on NYSE earlier this month...

Written June 12, 1995

NEW KCMO MORNING TEAM JOCKEYS FOR POSITION

Successive stories in the Kansas City Star suggest KCMO(AM)'s morning team may be in for a rough ride even before it starts.

Former KCFX(FM) morning newscaster Rick Tamblyn will take over as host of the show later this month. One Star article gives the date as June 23, pending expiration of a no-compete clause in Tamblyn's KCFX contract.

Tamblyn told the newspaper he decided to make the move because "they were cutting me way back" at The Fox. He added, "I'd have to tell jokes during the news and that was the only way I was getting my licks in."

Tamblyn told the newspaper, "I like the responsibility they've [KCMO] given me, but at the same time I'm joining people who are already here." Former morning host Paul Fredricks, who left suddenly in March, noted, "It will be interesting to see if Jon Hart and Wendy Garrett [his co-hosts] get along with him." Fredricks also told the Star he would give this advice to Tamblyn, "You're not going to get anywhere by playing a patsy to anybody."

KCMO says it will make the morning show more entertainment-oriented with live skits among other features. KCMO's duopoly partner KMBZ(AM) has positioned itself as a morning-drive all-news station, making it difficult for KCMO(AM) to focus on news as well without overlapping with KMBZ.

WILL J.C. CORCORAN STAY IN ST. LOUIS?

WVRV(FM) morning host J.C. Corcoran will soon be gone from the alternative album-rock station. Corcoran's contract expires at the end of July and will not be renewed, according to the St. Louis Journalism Review.

Corcoran originally came to St. Louis 11 years ago to revitalize KSHE(FM)'s morning team, and there was speculation he might go back. However, the SJR said those talks were contingent upon the ability of KSHE's owner, Emmis, to form a duopoly with KSD-FM. KSD-AM/FM were sold instead by Gannett to EZ Communications, owner of KYKY(FM).

Corcoran is presently off the air but still getting paid by "The River." He declined to comment to the SJR about his situation. Figures published by the SJR showed that Corcoran had earned substantial ratings gains for WVRV. However, the SJR quoted industry sources as saying Corcoran burned his bridges with most

of the radio station operators in the St. Louis area.

It's too bad; Corcoran is genuinely talented and seems to add spark to the stations he's been at, including the now-moribund classic rocker KSD-FM.

PROGRAMMING CHANGES AT MID-AMERICA STATIONS

* Kansas City's WHB(AM) has begun a weekly Spanish-language program from 6 to 10 pm on Saturday. Commercials are sold for the show, which features a mix of Spanish-language adult-contemporary and ranchera music. This is a creative use for WHB's regional-coverage signal to reach isolated Mexican-American communities in Kansas City and northeast Kansas. Still, it's jarring to hear the city's one-time Top-40 pioneer calling itself "Doble-OO Ah-che BAY!"

* The simulcast arrangement between Jefferson City's KLIK(AM) and California's KZMO-FM has ended. KLIK and KZMO-FM, newly married duopoly partners, now are broadcasting separate country formats. Work continues on an upgrade to KZMO's signal to 50,000 watts, broadcasting from the KJMO(FM) tower site in Jefferson City.

* The M Street Journal reports that Boonville's KTLH(FM) has applied for a change in its allocation. KTLH is seeking to change its city of license to Fayette, the Howard county seat, and increase from class A (6,000 watts) to class C2 (50,000 watts). The station would remain at 93.9 mHz. The move obviously is intended to boost "Lite FM's" signal in its target market, Columbia. KTLH owner Dick Billings is also involved in a rulemaking to add 104.1 mHz to the Jefferson City market. Market observers believe Billings plans to simulcast "Lite FM" on that frequency if he obtains it.

* A high-profile syndicated morning show has finally broken into a Missouri market. WIBV(AM) in the St. Louis market will begin broadcasting the Don Imus show next week, according to the St. Louis Journalism Review. The show will air from 7 to 11 a.m. The SJR quoted sources who said WIBV is paying an amount "in the six figures" (with or without the decimal point?) to carry Imus. That amount, said the SJR, is still less than the $350,000 asking price for the Howard Stern show. No syndicated morning shows are broadcast in Kansas City, and it is unlikely this will change any time soon.

UPDATE ON PIONEER HIGH-FIDELITY RADIO

The Mid-America Radio Page <URL: http://www.interstate.net/~transvox/marp.html> gets letters!

One of them, from Thomas White of Wilmington, North Carolina, provided some much-appreciated information about the end of Kansas City pioneer high-fidelity broadcaster W9XBY at 1530 kHz, later KXBY and KITE.

KITE eventually became a standard broadcast station at 1590 kHz, after the 1941 reallocation of North American radio stations under the Havana

agreement. Just 18 months later, the station went silent.

An item in the DX News on October 31, 1942 reported that the
station, with the call letters KXKX, went bankrupt and pulled the plug on
October 1, 1942.

Thanks, Thomas!

Ironically, the call letters KXKX have returned to western Missouri on
KXKX(FM) at 105.7 in Knob Noster. KXKX can be heard on the eastern side
of the Kansas City metropolitan area. The 1590 kHz frequency is also in
use in Kansas City by Black gospel station KPRT(AM).

228. Pittsburgh Radio Watch

Newsgroup: rec.radio.broadcasting
Date: 1995-06-13 00:00:00 UTC
From: AMCCOY@delphi.com
Message-ID: <3rkruu$j2s@vixen.cso.uiuc.edu>
Source record: 31443

(Copyright, Pittsburgh Post-Gazette. Reprinted here
by permission. Republication prohibited in any medium.)

How is the specter of Newt-onian economics affecting local public radio? Are listeners digging deeper into their pockets to help bridge the gap threatened government spending cuts would impose on public radio budgets?
The mood locally is cautiously upbeat, based on recent fundraiser figures. WDUQ-FM set some records in pledges, raising $304,031 in April - with a 35 percent increase in dollars coming in and 52 percent more pledges than Spring 1994.
WYEP-FM considered its March fundraiser to be its most successful ever. It netted $134, 158 from 2,684 contributors, for an 11 percent increase in funds compared to the previous campaign in September 1994.
WQED-FM came close to its $200,000 goal, bringing in $192,000 in its spring fundraiser. That's lower than last year by $6,000, although the drive was five days shorter.

Stoney Richards is back in country radio, doing weekends and fill-in work on WXRB-FM (The Rebel). He's on Saturdays from 5:30 to 10 a.m. and Sundays from noon to 5 p.m.
Richards formerly did the morning show at WZPT-FM (The Point), and before that at WQKB-FM (K-Bear), which changed format last year.
He also guested on WTAE-AM on Memorial Day as a fill-in talk host.

Nominees for the radio industry's Marconi Awards have been announced, and several local stations are among the contenders. The annual awards are presented by the National Association of Broadcasters based on ratings, community service, creativity and success in the market.
WDVE-FM is up for major market station of the year (top station for all formats in the top 25 markets,) and for rock station of the year. WWSW-AM/FM is up for oldies station of the year.
The awards will be presented in New Orleans on Sept.. 9 at the NAB convention.

August will be a big month for Pittsburgh Steeler Rod Woodson. That's when his new restaurant Woodson's All Star Grill will take over the current Pittsburgh Sports Garden site. He'll also join the WDVE morning show's Steeler coverage as a weekly guest.

Comedian Billy Elmer has joined WDVE-FM on a regular basis. Elmer, whose official job description is ``resident comedian,'' is now a morning show regular, as well as making occasional stops on the afternoon drive and night shows. He'll also fill in for morning hosts Scott Paulsen and Jim Krenn during vacations
Elmer is a Pittsburgh native and stand-up comic well known to local comedy club audiences. He has appeared on several cable TV comedy specials and

has been been a frequent guest on WDVE in the past

Mike ``The Real Deal'' Neil is signing off at WBZZ-FM.
Neil, who did the 7 p.m. to midnight shift, is headed for a new job doing afternoon drive next month at KALC-FM, a contemporary hits station in the Denver market.
Neil says KALC had approached him several times with job offers, and that the station's creative approach to radio made it an opportunity he couldn't turn down. ``The biggest regret I have is leaving the relationship I have with my audience [here]. Those are the people I'm going to miss most.''

WEDO-AM will launch a new talk show focusing on women and women's issues.
``Talk Spa for Women'' is ``by women, for women,'' according to host Marlene Breegle.
Breegle says there's a void in the glutted talk show market for programming that addresses how the issues of the day impact women. Guests and experts on the show will be mostly women - attorneys, physicians, financial advisors.
But, Breegle stresses, ``This is no male bashing'' - but rather a positive approach to psychological, physical and economic problems and questions unique to women.
Breegle owns She-Quest, a company that provides motivational programs for women.
``Talk Spa'' starts June 5 and airs Mondays at 3 p.m.

229. Re: ADMINISTRIVIA: Posting Arbitrons

Newsgroup: rec.radio.broadcasting

From: talk1370@aol.com
Message-ID: <3rkruv$j2v@vixen.cso.uiuc.edu>
Source record: 31444

To Bill, and to everyone...
It seems to me that Arbitron is attempting to enforce a degree of censorship here, that's both unacceptable and quite possibly illegal.
Once Arbitron results become public knowledge, and are published in the trade press (of which AIRWAVES is clearly an increasingly important part) they are part of the public domain. It seems to me the only way Arbitron can change that is by denying ALL permission to publish...in which case, of course, their ratings could not even be communicated to potential advertising clients, and they'd be absolutely useless to the stations and rep firms who are their major customers.
Arbitron loses no clients with the dissemination of this kind of information purely within the trade, any more than they lose them with dissemination of the information in Radio & Records or Billboard. They MIGHT lose clients if their terms become so restrictive that the numbers lose much or all of their promotional value, in which case Accuratings' more liberal policy could make them the rating service of choice for the industry.
Nielsen once did radio ratings, was once as important as Arbitron back in the 40s and 50s...but they were super-restrictive about the use of their service and radio stations eventually dropped them. Pulse was pretty tough that way too...and they're long out of business. Arbitron can be next, if it isn't customer-friendly...
Bob Smith, middays WXXI-AM 1370 Rochester NY

Source record: 31446

I thought I posted these thoughts some weeks ago, but I never saw them so if this is redundent I'm
sorrey but it's important so here goes:

Bruce Williams has been nominated to the Radio Hall of Fame.

I normally will not go to bat for a star on a competitor, but Bruce is a big exception. You see, Bruce's
pioneering efforts in talkradio the medium made me (and a few others of us) rich because he legitimized
talk at a time when people were saying that AM radio was dead.

Compared to the other nominees, Bruce deserves the honor. He's not controversial--but he gets
results. This, after all, what radio is about.

He has been wildly successful and his success made a lot of us successful.

More than that, he's not some overpaid PD or consultant. He has always run his program like a
business and he puts his money where his mouth is. He owns standalone AMs in Longview and Tyler
Texas.

If you have a vote or have some influence over someone who does, remember that the Hall of Fame
should occasionally include someone who has done more than be successful in his own right.

Bruce is one of us and I'm happy to be out here in cyberspace suggesting that if we don't hang
together we will most assuredly all hang seperately.

: there using DIgicart's, and have had this problem? Was it indeed a phase
: probelm, and was it correctable?
:
: Rob Bass
: America Online

My experience with DigiCart I systems was nothing but BAD! 360 systems finally admitted that there is a problem with the operating system on the I series and replaced our two machines with DigiCart II's. The II series has been excellent, with many of the I series flaws fixed and a slightly different operating system --- highly recommended.

As far as your sound problem goes - it may be a phasing problem, but I doubt it. If the machine is wired out of phase any mono-recorded signal (ie. a voice) will cancel out beautifully, leaving a large silent gap (this I've learned from experience)! More likely the problem is with the hot audio output of the DigiCarts (+10 dB) overloading the input to your broadcast console. A pair of 20 dB in-line attenuators and a re-setting of your console input levels will probably be in order. BTW, our DigiCart II's sound fine in production and on-air.

Hope this helps!

Reply-To: JayCee@midmarsh.demon.co.uk

Premier Radio, Britain's first Christian radio station, has been reported to the Radio Authority just two days after its launch.

Lesbians and gays have written asking for the station's licence to be revoked because of its "inflammatory editorial policy" after alleged remarks that same sex "genital activity is outside God's plan and therefore wrong".

It will be interesting to see what the official response will be.

--
JayCee@midmarsh.demon.co.uk

[Moderator's Note: Sounds funny from this side of the pond where so-called Christian radio is just loaded with such judgement and condemnation, while claiming to espouse the philosophies of one who championed forgivemenss and tolerance... weird. Bill]

Kathy -- I can definitely dispute you. ALL the DJs during the CBS-FM Radio Greats weekend were great (although even I admit that Greer got much too much time). As for the Brucie-Wolfman thing, if you had read Friday's NY Post, you can understand why Brucie was making such a mishegas about it.

I was there for the live broadcasts both days; it was great. Everybody came down. It was great seeing Ed Baer there with his wife, along with Ron Lundy and of course "triple D" (Dandy Dan Daniels), who seems really nice. I wish CBS-FM could run these reunions more often; I wouldn't mind.

Source record: 31252

Press Release

FOR IMMEDIATE RELEASE

Veteran AP broadcast executive John Willis has joined Media Services Group as an Associate, according to George R. Reed, manager of MSG's Florida office.

Willis, 48, spent 16 years with the wire service in editorial and sales positions across the country.

"We are extremely pleased to get John on our team," said Reed. "His experience throughout the South has prepared him well, and his contacts throughout our industry are second to none."

Reed said Willis will focus on southeastern small markets in order to better serve the Media Services Group customers.

"George has given me a unique opportunity, and I'm excited about joining MSG," said Willis. "This new chapter in my career will allow me to help small-market operators find their real value in today's exciting station trading marketplace."

Willis joined the AP as a broadcast writer in 1973 after stints at stations in Iowa, Illinois and Ohio. He was named Nebraska news editor in 1974, Las Vegas correspondent in 1976 and Spokane correspondent in 1978. In 1979, he was named the broadcast sales representative for south Texas, based in Houston.

Willis left the AP in 1983 to oversee his family's restaurant operations in Aiken, S.C., and Augusta, Ga. He returned in 1989 as the regional sales executive for Louisiana, Arkansas and Mississippi, based in Jackson. For the past four years, Willis has based in Orlando, calling on radio stations in Florida and Georgia.

Media Services Group, Inc. is a full service media brokerage, investment banking, valuation and consulting firm, with offices throughout the United States. The company was formed in 1990 by a group of former Chapman Associates broker/consultants, and has grown to become a major force in radio and television station trading. The Company's growing client list includes many of the nation's leading broadcasters, broadcast investors, and communications lenders.

I used to drive past the WMCA site (with its neon call letters) on my way to work at Z-100's studios, and got a very nice tour of the inside of the building (with my camcorder) from one of the WNYC-AM engineers, whose name I'm embarrassed to admit I've forgotten.

> This would have been quite a coup for the station in its golden age.

Yes. It sure would have made them more competitive with WABC's 50,000-watt signal, which ultimately outflanked them and (later) WWDJ-970 in Hackensack.

> I also hear that another legend, WADO, will also go up to 50kw, from its

> their beautiful diamon-shaped Blau-Knox tower, which is one of only a
few
> still in existence.

Yet another transmitter site I used to pass on my commutes to Z-100, usually while headed up the road to visit friends in New Jersey. WKDM-1380 (formerly WBNX) is along the same road, with its three-tower directional, and there are several others in the vicinity as well!

To answer the original question, I don't know what they plan to do about that CP. Now that Salem also owns WFIL-560 in Philadelphia, I think they might make a few modifications to the WFIL pattern to allow WMCA to open up its signal a bit more. And I believe Salem also owns WWDJ-970 now, if I'm not mistaken.

Here's what's happening in the 55th market: Carlsbad,
Oceanside, San Marcos, and Escondido:

Stephanie Miller! The popular nighttime host on KFI [640]
Los Angeles, will host a party at Universal City next Friday
[June 23]. During on-air promos, she'll do the show from
7 - 9 p.m., and then party afterwords.

Her Buena Vista distributed television show starts this fall.
Rumors have been put to rest about the Dr. Laura Schlesinger's
tv show: the deal fell through, and there are no current plans
for her to get back in. Schlesinger's radio show is heard locally
on KFMB-AM [760] from 9 - noon, and noon - 2 p.m., on KFI.

Former rocker, and KLOS [95.5, LA] host Gino Mitchellini has tried
the talk show route. He is heard on KFI Sunday mornings for three
hours starting at 9 a.m. His show, which got a rocky start last
week, replaces the "Worst of the Worst of John & Ken," the weekday
afternoon program.

KIOZ [Oceanside], popularly known as Rock 102, will be at the Vista
water park, "The Wave," to help kick off the summer splash season.
This is the first time that I can remember the North County broadcaster
doing a remote here. Commonly, Rock 102 stays in the San Diego
metro area in the remote arena.

Fan fallout. Ted Leitner, in his daily show on KFMB [3 - 5 p.m., week-
days] has said that the ratings for baseball on TV and cable have
fallen off. [Exceptions noted for WGN and KTLA, & KWGN. And, all
Tribune stations at that!] He said that the latest polls for local
broadcast on radio haven't been published, but the TV side "has been
dissapointing." KFMB had a hard fight with XETRA [690] for broadcast
rights. This years package includes telecasting on co-owned KFMB TV8 on
weekends, and KTTY TV69 weekdays. KFMB doesthe producing when the
games are on KTTY. Has the fallout been felt outside of the San Diego
market as well?

The Del Mar Fair started yesterday, and known broadcaster doing remotes
or having reports from there include:
KKLQ, KIOZ, and KOGO [all Par Broadcasting]
KFMB-AM & KFMB-FM

Dear RRB reader:

My name is Tim Bajkiewicz and I've been in radio for 11 years,
including WNIC-FM Dearborn-Detroit, WRQN-FM Bowling Green-Toledo,
WYKS-FM Gainesville, FL, and most recently WRUF AM/FM Gainesville.
I'm now finishing my masters degree in Telecommunications at the
University of Florida and am writing my thesis on community ascertainment.

I need you help! I would like to read your comments on community
ascertainment. In the radio deregulation of 1981 the FCC left
ascertainment to the "discretion" of broadcasters.

What do you think about this? In 1995, are community ascertainment
efforts needed? Useful? Necessary? Does your station perform
ascertainment? Interview community leaders? Interview the general
public? Who do you identify as community leaders? Does your station
address community issues, needs and concern? If so, how?

Please either post your response to this newsgroup or feel free
to e-mail me at cabbage@ufcc.ufl.edu. I would like to use responses
as part of my thesis. Any transcription or quote will be anonymous.

Thank you!

Tim Bajkiewicz
Promotions Director, WRUF AM/FM

XXXXXXXXX DRUDGE REPORT FINAL XXXXX JUNE 15, 1995 XXXXXXX

HOUSTON, THE REST HAVE PROBLEMS

HOLLYWOOD (DR)- Here is a way to make some quick money this weekend. Place a bet with anyone who does not believe that BATMAN FOREVER (BF) will open this weekend with the highest box office take in the history of motion pictures. JURASSIC PARK , with $50.2 million, is the current opening weekend champ but not for much longer. WARNERS executives must have been popping open that special champagne late Wednesday when the reviews for BF starting coming in. "Refreshingly Vibrant!" "Carrey is a jaw-dropping virtuoso on display!" "A Monster Smash" "Houston, the rest have problems!"

The late word that WARNER BROTHERS is adding midnight shows on tonight (Thursday,) will only add to the take.

Sen. Bob Dole is even up on the BF flick. "My understanding is it's a good movie," deadpanned Dole.

However, the victory was not easily won- WARNER BROTHERS called in all of their chips for this one. An editor of a national magazine told the DRUDGE REPORT 'they almost twisted our neck to put Nicole Kidman on our cover!' In fact, over the past few months we watched in horror as the BF payola was starting to be spread around town. What was Kidman doing on the cover of over 9 different magazines during the past few weeks? Who is she? The last time we checked there was not a sole lined up in front of the Mann's Chinese Theater here in Hollywoodland. But Caltech is reporting a land-shift that is carrying the masses towards the Boulevard.

All else this summer, are seconds.

``JEW ME, SUE ME, EVERBODY DO ME"

HOLLYWOOD (DR)-- This is no stunt. Michael Jackson is in very hot water. At press time, it was almost a human boil. The new song THEY DON'T CARE ABOUT US, from the new Jackson set HIStory, is causing more than a mild outrage from Jewish groups. In the new song ``They Don't Care About Us,'' Jackson sings, ``Jew me, sue me, everybody do me/ Kick me, kike me, you can never get me.'' Yes, you read that right.

The SONY CORP. must be must be in a literal panic over the red-hot scandal developing from the lyrics. It is to late for a recall. Will heads will roll over this one?

When asked Wednesday about the lyrics from THEY DON'T CARE ABOUT US Jackson's manager, Sandy Gallin, who is a new-age Jew himself, said "When

I heard those lyrics, I thought they were brilliant.''

The Jewish groups we were speaking to today thought differently.

Hoping to stop the fire, Michael Jackson has run to THE NEW YORK TIMES. Jackson gave a statement to The New York Times on late Wednesday. It said: ``The idea that these lyrics could be deemed objectionable is extremely hurtful to me, and misleading. The song in fact is about the pain of prejudice and hate and is a way to draw attention to social and political problems. I am the voice of the accused and the attacked. I am the voice of everyone. I am the skinhead, I am the Jew, I am the black man, I am the white man. I am not the one who was attacking. It is about the injustices to young people and how the system can wrongfully accuse them. I am angry and outraged that I could be so misinterpreted.''

*43 share in the overnights for ABC and MJ/Oprah can sleep easy, Sawyer's interview numbers are great but not mega

THIS IS CNN

LOS ANGELES (DR)- The DRUDGE REPORT has been briefed on the potential windfall of revenue CNN is set to realize from the on-going coverage of the OJ Simpson trial. CNN is charging up to $24,000 per half-minute of commercial time and could make more than $45 million on the trial, according to one industry estimate.

Is this how Ted Turner wants to be remembered? Making $45 million from an American nightmare? Apparently so. A spokesman for CNN in Los Angeles would not give us the time of day on the question of profits stemming from the airing of the trial. Funny how the 'no comment' routine has become an addiction with the mass-media when they are caught with their pants down.

The stockholders of TURNER are not the only pigs that are profiting from the murders of Nicole and Ron. Some money hungry type is selling ``I Killed Nicole'' T-shirts for $12, along with pins and bumper stickers. The shirts are being sold all over Los Angeles and are a favorite with gang-bangers.

SO WHAT NOW FORREST?

HOLLYWOOD (DR)- PARAMOUNT is telling anyone who will listen all about GUMP & COMPANY. The blueprints for the sequel to FORREST GUMP have just been delivered and boy are Lansing & Company excited. GUMP & COMPANY, which continues the story that inspired the second-highest domestic box office release in history, will be published in August by Pocket Books, a division of Paramount-owned Simon & Schuster. This book details Gump's travels and travails from 1980 to the present. It is a tale of big Forrest, who is an idiot, and young Forrest, who is a genius, and how they get along together. GUMP & COMPANY is also said to include the same type of picaresque scenes so popular in the original. Anywhere from the fall of the Berlin Wall to Oliver North to the Exxon Valdez, Gump is there causing a lot of trouble. Will Hanks do it?

DRUDGE WIRE

Singer Roger Clinton, President Clinton's brother, plays to a nearly empty club in Los Angeles last weekend. Friends, staff and the news media barely dotted the room at the famed West Hollywood Troubador as the President's brother sang "God Bless the Child"...FOX TV is preparing to challenge NBC's SATURDAY NIGHT LIVE. Look for FOX to go with MAD-TV, a spin-off from the MAD MAGAZINE, on Saturday nights this fall... Over 40 homosexual visitors to the White House, who included state senators and representatives, city council members, judges and other elected officials, were met by members of the uniformed division of the Secret Service, many of them wearing rubber gloves. The fear of AIDS prompted the Service to play it safe. Clinton is outraged...We hear billionaire David Geffen is still living by the motto "FU*K THE ESTABLISHMENT." The affirmation started back in the 'hungry years' for Geffen- back when he was broke and a rebel of sorts in the music business. *Visitors to Geffen's famed Sunset strip offices were greeted with a poster of a middle finger reading his motto* But Geffen's anger at the establishment would appear to no longer be valid. This week, when Geffen agreed to link-at-the-hip with MCA/UNIVERSAL, he became the establishment. How ironic...Is Connie Chung getting ready to sit in the anchor chair at FOX's CURRENT AFFAIR?...Heatwave in Egypt with tempretures of over 125 degrees...Salt Lake City, we have our fingers crossed for you. The hope is that you indeed are awarded the rights to stage the 2002 WINTER OLYMPICS. The decision will be made at high noon on Friday...THE WASHINGTON POST IS set to launch an online news service...As the X-FILES' WWW is getting 10,000 hits an hour we are told. If you can get in, the address is http://www.delphi.com...

In article <3rkrv8$j3h@vixen.cso.uiuc.edu>, <RobABass@aol.com> wrote:
>
>
>I have a very interesting question reqarding the tone lengths for the new EAS
>system. As I understand it, come this July, we can shorten tones down to 8
>seconds, for the TESTS, but we must still use the 22+ tone for an EMERGENCY.
>

I think the word "must" is a little strong. The FCC in the
discussion in the report and order (there's a pointer to it on my www
pages) says they "strongly encourage" use of the 20-25 second tone during
an actual emergency, but the rules themselves say the tone must be
between 8 and 25 seconds. The encouragement didn't make it to the
rules.
I believe that EAS equipment will take the FCC's encouragement
into account and vary tone duration based on message content. 'til the
EAS equipment is available, though, it seems certainly permissable to do
8 seconds of tone (after July 1).
The relevant text from the Report and Order follows...

Harold

96. The majority of commenters in this proceeding advocate
shortening the two-tone attention signal because it is no longer
perceived as an alerting mechanism, but as a precursor to an EBS
test. We believe that the arguments advanced by commenters who
advocate shortening the length of the two-tone signal are
persuasive. We recognize the concerns of the blind community,
however, who wish to retain the current length of the two-tone
signal for emergency alerts. To ensure protection for the blind,
the new tone was tested in several locations. The piercing
burst of short tones attracted the attention of both the blind
and those involved in noisy activities such as listening to
music. Therefore, we will allow EAS participants to shorten the
two-tone attention signal to a minimum of 8 seconds beginning in
1995 or to use a signal of up to 25 seconds. Use of the existing
two-tone attention signal to initiate emergency alerts will be
phased out during the transition period permitted by this
Order. We permit the use of the shortened tone for the monthly
on-air test so as not to desensitize audiences. We strongly
encourage EAS participants to transmit a two-tone signal of 20 to
25 seconds in an actual emergency alert in order to attract the
attention of all listeners, including members of the blind
community.

168. More specifically: (1) existing two-tone decoders at broadcast stations must be modified by July 1, 1995 to be capable of decoding the shortened 8 second two-tone signal; (2) after July 1, 1995, stations may transmit the shortened two-tone attention signal for not less than eight seconds nor more than 25 seconds; (3) use of the new EAS digital signal is optional until July 1, 1996 for broadcast stations; (4) key EAS sources are advised to begin using the new digital signal as soon as equipment is available; (5) after July 1, 1997, the two-tone must be used only as an audio alert signal for the monthly test and actual emergency messages; and (6) class D FM and low power television stations must have decoders according to the above timetable for broadcasters.

(iv) Time Period for Transmission of Tones. The encoder shall have timing circuitry that automatically generates the two tones simultaneously for a time period of not less than 8 nor longer than 25 seconds. NOTE: Prior to July 1, 1995, the Attention Signal must be at least 20 and not more than 25 seconds.

GLOSSARY OF TERMS

Attention Signal -
eight seconds of two tones (853 and 960 Hz) used as an audio alert

MC> FYI, YOu'll hear those darned EBS tones get a lot shorter by the end
MC> of summer. The Commission is letting us run them for about 8
MC> seconds rather than the 25 formerly required...

In fact the FCC deadline for changing your generator (tone encoder) to the 8 second tone is July 1, 1995. If you hear any stations using the long tones after that they are in violation.

Incidentally, the entire EBS (Emergency Broadcast System) is in the process of being replaced with a newer and higher tech version, the EAS (Emergency Alert System). The term "Broadcast" was dropped because more than broadcasters will be part of the system, cable tv for one...

Was never told you had to do an ID after an EBS test.
However, if lightning, Xmttr problems, or squirrels take you off the air, even for a couple seconds, you DO have to do an ID when you get back on, even if you're popping on and off like a kid's flashlight at Halloween. During thunderstorm season, it's amazing how many stations you hear that don't do that...or, for that matter, feel the need to let dial-tuners or travelers know more than once an hour who the heck they are.

254. Re: Can 88.3 FM coexist w/TV channel 6?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: Steven Lloyd Auterman <sa1y+@andrew.cmu.edu>
Message-ID: <3rtu0i$774@vixen.cso.uiuc.edu>
Source record: 31311

WRCT in Pittsburgh is located at 88.3fm, WJAC TV-6 is broadcasting out of Johnstown, about 40-50ish miles away. FCC rules govern the degree to which low frequency stations (88.1, 88.3, maybe even 87.9) can interfere with the signal of a TV-6 station (and vice versa).

The basic upshot is that the radio and TV signal strength of 60dbu or more cannot overlap, creating a stronger interference zone where one doesn't greatly overpower the other. A small interference area can exist without difficulty if the number of households in that area (determined by the area multiplied by the average household density in the census tract) does not exceed 1000. If it is between 1000 and 3000 (I think those numbers are right), the station that is interfering must make amends so that the interference is reduced or eliminated. Usually this means the FM station will install a reception inhibitor on the antenna of the TV sets in the interference area for free. Interference over 3000 is not allowable.

So...in our history, WRCT 88.3fm has had to prove each time we've upgraded that our improvements will not interfere with TV-6's protected service area (within 60dbu). We haven't.

The interesting part comes when we were applying for our latest power upgrade. Just a few days before the close of competing applications, a christian radio network filed for a new station at 88.1. During the following 5 or 6 years, they had to deal with modifying their proposal such that they wouldn't overlap with TV-6's signal. Since 88.1 is closer to Ch. 6's range, their signal strength has to be much lower to not cause interference. The end result was that they chose a directional antenna pattern that avoided the Ch. 6's primary service area.

A note: limited interference is okay, if the stations take steps to resolve complaints. However, if a low-end FM station's proposed coverage is wholely within the primary service area of the TV, some interference is permitted if the FM's signal strength is significantly less than the TV's signal. There's another senario that deals with allowable interference if the interfered area is covered by another station that is affiliated with the same network at TV-6 (thinking that you won't lose network programming if you can chose between garbled Ch. 6 or another channel).

Moral of the story: some intereference is allowable, some is not. Check the rules. Personal experience shows that a grain of salt must be taken with each case. (For example, the 88.1 station around here said that the households that were in the interference zone numbered about 2900+, but less than 3000. We considered that the interference area was

more densely populated than average and found more households than the
3000 limit allowed. So...they had to change their application.)

Maybe this helps...maybe not. Consult your lawyers (if they're good).

There's been a lot of responses to Jamie's original
post about the KSDS 88.3/XETV TV 6 problem.

The Wednesday "San Diego Union Tribune" broadcast briefs
had a small, but important, note:

It reported that Bay City TV, the sales/marketing arm of XETV,
Ch. 6, filed the appeal with the FCC. The appeal was based on theat
KSDS' increased signal would interfer with XETVs audio signal in San
Diego. [Bay City doesn't own the station, just does the $ales.]

KSDS is presently at 831 watts, and would go to 19k ERP, if approved.

KPBS-FM, 89.5, has a translator at 89.1 for residents in Mount Soledad.
That location is host for many FM and TV outlets, and the translator is
for local residents to hear KPBS. Otherwise, the overloading of FM from
nearby antennas would not permit any reception.

I'll throw this out: Have KSDS change to 89.1 with a directional antenna,
and KPBS' translator move to 88.3. They would still serve the intended
audience, and XETV's signal from Baja won't be compromised. Now, if
viewers of the Fox outlet can get the Mexico station to CLEAN UP ITS
LOUSY SIGNAL. [Long time SD residence will testify that there are sudden
drops, monochrome signals, and ghost reception on and off cable.]

Thanks for the info but...which directory? It is not obvious from the
hierarchy of html documents or the //fcc.gov/index.txt file.

The FCC really DOES do inspections! I've been in broadcasting for 20+ years but experienced my first inspection just last year. Our zip code was randomly chosen, and all the radio stations in town were inspected in a two day period by one inspector. We passed, partly because our state broadcast association (NH) had funded the services of a "mock" inspector for member stations; he had been through ours just weeks before the real thing. This allowed us to correct some minor deviations from the rules.

Message-ID: <3rtu0o$77d@vixen.cso.uiuc.edu>
Source record: 31316

Hi!

I work with a radio network that broadcasts a number of sporting events. (Sorry, I am not currently at liberty to be more specific.)

As a part of our package to our affiliates, we provide:

o) Live coverage of the event;

o) Live coverage of other events leading up to the main event. (For example, qualifications for an auto race.)

o) Activity update reports two or three times a day for some period of time leading up to the main event.

The live coverage is currently provided via satellite or dial 900. We deliver to the satellite uplink service via switched-56 or ISDN.

The update reports are recorded on a 360 Systems DigiCart and then transferred to a BE Digitalk unit. The Digitalk is placed in a loop, its audio output coupled to a number of phone lines. The afflilates call the phone lines on a regular basis to pick up the new reports.

We would like to make the update reports available to our affiliates in a pure digital format. We also have other material we would like to provide to our affiliates but don't have a good means. The latter includes raw sound bites, produced material that never got used, etc.

We are thinking that we could digitize the material into .WAV or .AU (or maybe RealAudio) format and then place the files somewhere on the Internet. Affiliates could then download the information from the 'Net and play it.

We're not real sure what format we might use, how we should distribute the material, etc. We've been thinking that making the items available on a Web site would be useful; someone else has suggested that we just Email the digitized audio files directly to the affiliates that want them.

Anyone got any ideas or opinions? Put yourself in the shoes of one of our affiliates: what would you like to have?

Drop me a line if you any questions or comments.

Thanks!

Have you heard the resurgence? Does anyone remember
underground or experimental FM radio of the late 60's?
Thousands of listeners are experiencing iRock worldwide.

KPIG in Freedom, CA did a fine job of demonstrating how
to use RealAudio to broadcast a portion of Wild Bill's
morning show to the world, via the Internet. (Talk about
a run on sentence...)

Now, the first true _Internet Only_ music radio station is
born, and it's called...iRock[TM].

I'm not sure how many of you are aware of the fact that there
is _now_ a NetSite where you can listen to Progressive,
Eclectic Alternative/Alternative (Ecto) music in RealTime.

Using RealAudio[TM], iRock is On-Net-Air!

Tune your browser to 205.216.133.20 and check it out.

Looking to make it easy? http://www.irock.com

Come on over. You've never heard radio like this before.

gj@iRock

261. ISDN, anyone?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: tbswanston@ucdavis.edu
Message-ID: <3rtu0q$77g@vixen.cso.uiuc.edu>
Source record: 31318

I've been hearing recently about stations who use ISDN for sports broadcasting. However, there are a few things that are confusing me. We've been doing our sports broadcasting over a direct leased connection (local games), and telephone connection (remote games). Generally, the remote games are broadcast because the 'away' school lets us use one of their phone lines in the press box. Sure, ISDN can be used over almost any standard phone line in a number of cities, but is this feasible / possible for broadcasting a game that only lasts a few hours?
The only way I am able to imagine this is to work out an agreement (weeks in advance) with the 'away' school that they will have one of their phone lines converted into ISDN for us, forward the bill to us, then have it converted back to a standard line, again forwarding the bill to us. This seems like a nightmare. Is there an easier way to handle this? (Perhaps dial *ISDN :) How are YOU guys broadcasting sports via ISDN?

Any info/comments are greatly appreciated.

264. JINGLE-PACKAGES

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: Herbert Visser <hbhjv@xs4all.nl>
Message-ID: <3rtu0t$77l@vixen.cso.uiuc.edu>
Source record: 31321

On several radio-pages on the Internet, people wonder
where to get decent jingle-packages. Here in Europe,
until a few years ago almost all jingle-packages were
coming from the USA, and only had European vocals.
But these days are gone. We now have jingle-producers
in Europe that easily can compete with the Americans,
and in some cases even are a lot better than the
US Jams, Tanners and TM Century's. One of these
producers is a guy called Ferry Maat, who used to be
one of the best DJ's in western Europe in the 70's
and early 80's. He also has a classical music academy
education, is a full licensed classical piano-teacher,
but these days is a fulltime jingle-producer,
producing jingles for a lot of major radiostations
in the Netherlands and Germany. To me, his (always!)
custommade packages sound ideal for (Hot) Adult
Contemporary, News/Talk, Jazz and MOR-stations. Ferry Maat
is one of the few talents who both has professional
radio AND music as a background.
On the other hand, small market stations may find
his fee to expensive, because he certainly is not cheap.
I could write down his phonenumber here, but he's
combining his office with his house, and I'm not sure
wether he'd like it to get called out of his bed
every 10 minutes and hear that I'm responsible for this
(he used to be my Program Director in the late 80's,
but I don't think he did this job very well, as he spent
more time in the production studio than that he was
managing the radiostation. However, for his current
job as independent jingle writer,composer, musician
AND producer, this is an excellent pre). So, if anyone
is interested in checking out his jingles, please
drop me an -email- line and I'll email you his phonenumber
and address, and you can ask for a demo yourself.
Thanks for your attention.

KANSAS

Manhattan - KKSU-AM has an opening for a RADIO PRODUCER.

Responsibilities: Produce public affairs audio material for broadcast on radio station KKSU-AM and the Kansas State Radio Network, and serve as a communications consultant, as needed, within and outside of Kansas State University. Production will include scheduling, recording and editing of interviews with Extension Systems and Agricultural Research Programs (ESARP) and university personnel in a variety of fields, with particular emphasis on women's issues and the social sciences. Possess good broadcast production skills, be comfortable with analog audio technology and receptive to digital production tools. In addition, perform live announcing, function as part of a team and assist other team members with their production and operational duties, as necessary.

Qualifications: Bachelor's degree in journalism, mass communications, or closely related field. Two years of full-time production and/or on-air experience, preferably in public radio. Demonstrable writing, reporting, interviewing and production skills. Interest in broad range of issues, from youth and family to community development and agriculture. Women and minorities encouraged to apply.

Salary: Commensurate with experience.

Date Listed: May 25, 1995

Deadline: Applications will be reviewed beginning July 3, 1995

Send letter of application, resume, recent story/interview air-check, and names, addresses and telephone numbers of three work related references to: Ms. Gina Bingham, Kansas State University, Department of Communications, 301 Umberger Hall, Manhattan, KS 66506-3402.

Over on the Boatanchors email list (dedicated to older ham, military, and commercial tube equipment, and radio history), there is a thread titled Broadcast Blowups. I think you folks might get a kick out of reading these.

Jeff NH6IL

Blow ups! Not due to electrical failure...but a blow up just the same!

Old KLME...now new calls and a brand-new building...KOJO...Laramie, Wyoming in 1972.. Alan Boeker, DJ, on the air while natural gas was filling the studios, apparently due to an incorrectly installed furnace...

Al told me he had just opened the mike to back-tag a song..when literally the lights went out...the music quit in his earphones...and the next thing he knew he was sitting...he though...outside!

NOT! After he shook off the blast and looked around... the ENTIRE ground floor building had collapsed around him. Every wall had blown out..every inner wall had crumbled...the roof above Al had blown up...then had fallen totally around him. This good-sized, square building had come down around him as in a Buster Keaton movie.

He was still at the console with his fingers on the mic switch (open-air relays activated, sparked, and BOOM!) with an entire building sitting flatly around him! Shaken but totally unhurt...

Alan...where are you today?

More from the Boatanchors group. // Jeff NH6IL

--------BEGIN ARTICLE--------

>From: TOM.A.ADAMS@mail.admin.wisc.edu
>Subject: Broadcast blow-ups

to: boatanchors@theporch.com

A few folks here have asked for the horror stories of broadcast gear break-downs. Gads, what sadists you are! Broadcast folks would rather forget 'em!

Exploding mice in transmitter B+ supplies have already been mentioned. This one seems to be pretty common. I can tell you from experience that the Gates 20H3 FM broadcast transmitter (20 KW out, B+ of about 9500 VDC) isn't a very mouseproof design; I had to go out several times to fix that one (I was chief, and my transmitter was 70 miles out of town!).

Somewhat more dramatic was the time a Great Horned Owl decided to land on the power pole outside, with each foot on a different phase of the 3 phase line feeding the site. Unfortunately, he did it on the section of line AFTER the power company fuses, and it seemed like it took forever for the power company to get there to change 'em. The bird itself was interesting. He got zapped just as he touched down, and died with his wings still outstretched (I wonder if the corpse glided?).

One of the best blow-ups (or at least the noisiest) was my own doing when I was a very new chief. MY site was gonna be the best in the network, I decided, so I started ordering parts like crazy to bring gear back up to original spec.

It seemed that the electronic weatherstripping on the PA cavity door of the 20H3 was bad, and the inside of the aluminum door showed severe carbon tracking near it. PA efficiency was way down, and I decided this was the cause.

I had Gates/Harris make a new cavity door, and ordered new weatherstripping. The only problem was that they had included no way to attach the stripping to the door. On the original, it appeared to be attached by some sort of conduct-ive glue.

Being too impatient to call Gates and wait for mail delivery, I talked to the Director of engineering about the problem. What I didn't realize was that he hadn't worked on a transmitter in 25 years; I found later he hadn't been too good at it when he did, so they made him a paper pusher. He couldn't do very much damage that way.

"Get yourself some stainless steel sheet metal screws" he advised, "and just bolt the stripping in place on the PA cavity edge".

Being new and stupid, I did as I was told.

The stripping SHOULD have been a smooth, continuous strip. Instead, it was kinda lumpy with all those screws in it. Because of those gaps, some parts of the cavity door were at a different potential than others; VERY different.

When the rig was fired up, everything was OK... for about 10 seconds.

BLAM!!!

First impression; somebody's behind the transmitter with a 12 gauge pump gun. That notion was dispelled when the overload and fuse annunciator lamp panel lit up like a pinball machine.

A quick check showed that I hadn't, as I suspected, left a pair of pliers inside of the cavity. Nothing appeared amiss, so hit the B+ again.

Everything was normal. Well, let's dip the plate current a bit better...

BLAM!!!

Totally confused (and scared sh.tless by now), I dug up the Gates/Harris 24 hour tech service line's 800 number.

As the tech listened to my tale of woe, he began to chuckle. As I went on, it grew to a laugh. As I ended, he was roaring.

When he finally caught his breath, he advised me to get rid of those damned screws, and tie the stripping in place with skinned hookup wire thru the screw holes.

No further problem. As far as I know, this temporary fix is still in place.

The way I figure it, you're not REALLY a transmitter fixer until you've gone through a line burndown and lived to tell the tale.

High power transmission lines are pressurized to greater than barometric pressure, using dried air or dry, inert gas. The idea is to keep enough pressure inside to keep out moisture laden outside air in case of a leak in the outer conductor's joints, but not enough to CREATE a leak by blowing out the joint's rubber O-ring.

If this system fails, outside air leaks in and eventually moisture condenses on one of the Teflon insulators that seperate the inner and outer conductors. When that happens there's current flow across the insulator. The current will heat the Teflon, and it carbon tracks. When it tracks, the Teflon eventually gets hot enough to burn. When that happens, hot gasses carry soot up the line, and gravity pulls it down thru holes in the insulators below. The soot is conductive as hell, and the first indication of trouble that you get is when the transmitter VSWR monitor trips the rig off the air.

When you get to the site, the SWR bridge tells the story. You reduce power to the minimum, and watch reflected power. If the reading sorta walks around, it's time to call the tower crew.

The only thing to do is remove the transmission line, section by 20 foot section, and take it apart. Gallons of wood alcohol on rags are pulled thru the outer conductor to get rid of the soot, and the inner conductor sections that weren't melted are similarly cleaned, and burned insulators replaced.

You're talking 18 hour days during the summer, of filthy, back breaking work, hustling around line sections that can weigh up to a couple of hundred pounds for the the larger diameters. In winter, it's absolute hell.

I've been through two of these little parties, but I've been lucky. Both times it happened in good weather, and the transmission line was 3.125", which is relatively light weight.

Is it any wonder that there's a shortage of RF people in broadcasting these days? EVERYONE wants to stay in the studios and play with thier computers, and NOBODY even wants to know where the transmitter is!

73's,

Tom, K9TA

More stories from Boatanchors // Jeff NH6IL

--------BEGIN ARTICLE--------

>From: tech@cs.athabascau.ca (Richard Loken)

Well if we are going to talk about frying bacon.

I once worked in a station with a LOT of mice. I used to come in at 6:00AM to turn on the rig and after I had hit the filiments I would wander around and tip over the garbage cans to let the mice out.

One day I was working in the hall beside the transmitter and as I glanced down the hall I heard the bang of the overload relay and a flash shot out across the hall from the glass window of our RCA TT2BH (a 2KW channel 7 rig that drove a 10KW amplifier) followed by two other flashes and bangs as the overload retried for three times and out. Most impressive!!...

Once I got the door open I found half a mouse on output of the HV transformer. I cleaned the mouse out and got the rig back up and half an hour it happened again and I had to clean another mouse out of the secondary insulators. I figure that when hubby didn't get home for his lunch that the wife went looking for him.

I will take this oppertunity to complain about how RCA wired the pilot lights in their TT5EH. The lamps ran 12 or 20V or something through a series resistor off the 220V line. I once decided to change a burnt out pilot lamp during the 6:00 news, the lamp was a 328 type in a Microswitch push button assembly where you stick a metal puller in to grab the bulb. I stuck the tool in and shorted the two bulb leads together which provided a bang and a flash which pitted the front surface of my (glass) glasses and dumped the main breaker in the breaker panel. I ran over to turn the breaker back on and grabbed the breaker for the studio lights instead and now I had CJOC and CFCN both off the air in 15 seconds flat.

Some days...

275. NBC O&O drop call letters

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: San Diego Radio Watcher <chris@terminus.wccs.saic.com>
Message-ID: <3rtu17$785@vixen.cso.uiuc.edu>
Source record: 31332

NAB's latest newsletter [http address below], has an interesting article about NBC O&Os dropping call letters in reference to the station. A check of KNBC, TV 4, Los Angeles, confirms this. There is no on air reference to the call letters of the station, just NBC Channel 4, with the hourly required id in letters [and damn small ones at that].

This got me to think: in the San Diego market, only a minority of stations use their calls: KFMB-AM, KCBQ, KGB, KPRZ, KOGO, and KPBS. [this out of 40-some stations; and not counting the LA market, heard here as well]
A quick office poll of twenty co-workers found: "I listen to Q-106 [reference to KKLQ]." I asked if they listen to KKLQ, "I don't know that station." Likewise for Star 100.3 FM KFMB-FM]. The listner didn't know the call letters, just the moniker. Same for hard rocker 102 -- officially KIOZ, Oceanside -- it's commonly known as San Diego's Rock 102.

The moniker is especially true for the X-stations from Mexico. XETRA-AM and XETRA-FM, known outside of the market, go by XTRA Sports 690, and 91X respectively. Regular English-only listners to the station wouldn't know the official calls, as they are broadcast in espanol. XHRM, another alternative hits station, is known as the "Flash 92.5." Z90, the urban station, is officially XHTZ. The list can go on. [ARRO 93, Newsradio 1070, KISS-FM {LA}, etc., etc.]

The point is, NBC has moved on the branding that Fox started. I believe this will spill over into radio more. Vanity calls sought by owners may be on the downturn, and stations simply known by their moniker.

Here's the URL, look under "Odds & Ends."

276. New radio network up & running

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: platecap@bbs.gatecom.com
Message-ID: <3rtu18$786@vixen.cso.uiuc.edu>
Source record: 31333

The Collector's Radio Network is now up & running with weekly 2 hour feeds on Satcom C-5 Tran 19, Ch 06-1. Feed times are Saturdays @ 1PM E.S.T.

CRN is a new enterprise looking for help in areas of Promotion & Affiliate Relations.

Programming is full length format (54 min) talk radio with focus areas on collectibles & antiques and classic entertainment (which is still in development but will have some music content).

The broadcast team includes 35-yr veteran Detroit broadcaster, Art Cervi whose show is LETS TALK CARS which primarily focuses on the classics.

COLLECTOR'S CORNER is Tom Eurich's program which is a catch-all collectibles show featuring interviews, collectible "adventures", listener interaction, etc.

THE RADIO VAULT is the "entertainment" portion featuring classic radio excerpts, background & interviews, as well as an integration of big band and other collectible music.

All shows will take live listener call-ins, question & answer open lines etc. This is just a tip of the iceberg of what is planned.

Collector's Radio Network is looking for affiliate stations as well. The network is based in Dearborn Michigan, home of Henry Ford Museum & Greenfield Village, is a labor of love among its staff dedicated to providing quality programming on a barter basis.

If it sounds even marginally interesting, we'll even pay for the call: 800-739-7900. If you're local to Detroit are: (313) 359-0321. FAX Resumes or inquiries to: 313 359-0331. Network demos also available, as well as additional printed information.

>>is far from threatened by it. In fact, radio is in an advantage position of
>>being able to use this software to make the medium even more responsive,
>>flexible and fast.

I tried the RealAudio software with my Mac LC III and my 14.4K modem.
It was ok, sound quality was really not spectacular (As was expected),
although ocassionally, syllables were skipped (perhaps a 28.8 would
work better). Some of the programs (most notably, NPR) sounded extremely
muffled . . .

Can RealAudio handle live, on-air transmission, or just prerecorded files?

ISDN is fine for things that are from repeatedly used sites.

For Flexible RPU work, there is still nothing to replace radio
to do Radio with.

Yes, it can be a pain and especially so if the tech staff is
not "up to the task" of dealing with the issues of coordination
or the control of the equipment is lax such that it is used at
times when it causes interfearance with another user of a given
frequency.

It can be done and I'll pitch my services as one that has been
through the Drill on how.

Reply-To: aa938@freenet.carleton.ca (James Careless)

Hi, I'm James Careless from Radio World, writing to thank all of you who sent me suggestions for my upcoming RadioNet column on WWW radio sites.

I was literally startled by how many responses I got, so many that I essentially re-did my research to include some of them.

Unfortunately - as is always the case - I wasn't able to use them all this time `round. However, I intend to check out each and every one of them over the next few months, and would appreciate any further suggestions for future columns.

Thanks again,

jc

> Frank Forte
> Drew University -- home of WMNJ 88.9 FM

I had this experience a year or so back, here in the Dallas area. I
was scanning my car radio at lunch time, and it stopped at a "new"
CHR/Urban station at 93.3. The station turned out to be WFLZ(FM) from
Tampa, Florida, then going under the name "The Power Pig".

The cause of this phenomena is something called "ducting", wherein
temperature conditions and atomospheric conditions cause the atmosphere
to turn into a giant piece of waveguide, which conducts the signal around
the curvature of the earth, instead of the signal shooting over the
horizon and into space, as it usually does. Note that this is not the
same as the "signal skip" that allows long distance AM and shortwave
reception, and which can also (under some conditions) allow reception
of distant stations in the lower part of the FM band, and on the low
band VHF TV channels.

The difference between the two is that "skip" involves the signal
bouncing off the ionosphere and coming back down to the earth at a
distance typically about a thousand miles removed from the source. "Skip"
will never give you reception from a station less than a few hundred miles
away. (When I lived in Tacoma, WA, "skip" allowed me to receive TV
stations from as close as Idaho and as far away as Kansas, but never
anything closer, such as Oregon or Eastern Washington.) On the other
hand, with "ducting", the signal never leaves the earth, and distance
reception can range from a hundred miles to a thousand miles. Also,
ducting works at higher frequencies, and thus can give distant reception
on all of the FM band and TV channels, including UHF. Ducting has given
me reception of UHF TV channels in Dallas from places like Waco, Austin,
Houston, Wichita Falls, San Antonio, Harlingen (once!), Oklahoma City,
and Shreveport. On FM, it has given me reception from Houston, Austin,
Shreveport, Hope (Arkansas), Tampa, and once from North Carolina. There
are many more stations that I could never identify the location.

Also, I think that ducting works better in the South, and skip is more effective in the North. I say this based on my experience living in Dallas (where ducting is VERY prevalent, but skip is rare) and Tacoma (where the opposite was true).

Hopefully, this helps your curiosity.

> would be curious to know.

What you heard was a phenomenon known as sporadic-E, or E-skip, which is common in the summer, and is thought to be connected with severe weather and the ionization of the E layer of the atmosphere. When this happens, FM signals are bounced back to earth at a typical range of 800-1200 miles. Your reception of Orlando is similar to Florida stations I heard on many occasions when I used to live in Pittsburgh.

The same phenomenon affects the lower TV band, which is adjacent to FM, and sometimes distant stations on channels 2 through 6 can be seen. I vividly remember watching the Flintstones in Spanish on a Cuban TV station skipping into Pittsburgh on one occasion.

Fun, isn't it? <g>

I'm guessing that your Urban station might have been WOVV 95.5 in West Palm Beach.

Message-ID: <3rtu1f$78f@vixen.cso.uiuc.edu>
Source record: 31339

I'm not sure if the focus of this group allows for skip sightnings, but for what its worth, another skip was present in the airwaves on Wednesday, June 14th, for about 30 minutes starting around 8 p.m. The only station that I was able to identify was WENN, 107.7 FM, from Birmhingham, AL.

I believe this is the first time I've detected two skips so close to each other (8 days apart), what are my chances this year of getting more of them?

Thanks to all for the help in identifying the Southern Florida stations.

Message-ID: <3rtu1h$78i@vixen.cso.uiuc.edu>
Source record: 31340

Reply-To: davwitz@aol.com (DavWitz)

Rumor control: Is Star 104.5 (WYXR-FM, Philadelphia) for sale? Inside Media reports that Pyramid Broadcasting is looking to sell some or all of its stations. Star has fired competitively-paid DJs and replaced them with bargain-basement
talents (just listen) and "white Motown" format, while dumping money into TV ads--end result, midlevel ratings but big profit margin. Some feel EZ Communications may have the inside track as buyer, despite EZ already owning two FMs (Power 99 and Q102), the max allowed in a market.

Can anyone confirm or deny?

Our show for Sunday, June 18th:

In the 3:00 to 4:00 hour, my co-host Otis Woodard and I celebrate Fathers' Day (sort of) with humorist and gender expert Sandra Beckwith, who'll be talking about "stupid men tricks" - the idiosyncratic things men do that drive women crazy. Beckwith is the author of "Why Can't a Man Be More Like a Woman?" and edits "The Do(o) little Report", a newsletter that looks at the humorous side of male behavior. Call in at 314-664-FM88 to share your own examples or just offer your opinion on why men and women seem to be from different planets.

In the 4:00 to 5:00 hour, we welcome St. Louis wrestler and artist Wayne St. Wayne, along with Mr. Movies (from "The Weekly Bugle", the world's *softest* newspaper) with his video report and maybe some comments on "Batman Forever". On the musical front, we'll have selections from "The Music of Andrew Lloyd Webber" (which opens a week-long run at the Muny on June 19th; we'll be giving away tickets to opening night!), a set by Rufus Thomas (he's appearing with Oliver Sain on the 24th) and maybe even birthday tributes to Glenn Miller and Jacques Offenbach.

That's "One Step Beyond" ("It's never the same show twice"), Sundays from 3 to 5 pm on 88.1 FM, KDHX, St. Louis Community Radio.

We have a radio talk show on WCAP 980 AM called "Let's Talk Computers." Recently we were approached by another local radio station (in another state) to syndicate our show. However, the radio station owner from where we broadcast doesn't want to syndicate because of the closeness of the other radio station and because of the cost.

Rather than syndicate, I was wondering if we could tape our shows and sell them as a subscription service to other stations. Has this been done? How would we go about starting this up. My co-host and I are new to the radio business and would appreciate your comments and suggestions.

I've heard Star 104.5 (WYXR, Philadelphia) is on the block, as are all of
the Pyramid stations, and that EZ Communications is the likeliest buyer.
Since EZ already owns Power 99 and Q102, were the rules changed re how
many stations in a single market can be owned by a single company?

> operation in Rochester, NY (didn't get the call letters).

The Rochester station you heard was WCMF-990, which has a six-tower array in Clarkson NY beaming 2500 watts at night like a pencil right in your direction (and which ironically has some signal trouble in Rochester itself, especially south). So I'm not surprised that you heard them better than WALE!

The 990 frequency has an interesting history. It was originally WNYR-680, a 250-watt daytimer that had to be afforded considerable protection by CFTR-680 in Toronto (it's my understanding that CFTR was so directional, they used to have 13 towers along the QEW!). Eventually, with CFTR's help, 680 moved to 990 and added highly directional nighttime service (with a pattern headed sharply away from Canada) and CFTR was able to build an new eight-tower array for themselves near Grimsby, Ontario.

I forgot to include the 990 frequency in my list of Rochester AM stations when I recently replied to comments in this newsgroup about the WHTK-1280 signal.

If you find them annoying, you have a very simple choice: don't listen.

Fortunately for some of us, we understand that to know where you're going, you have to know where you've been. Or, to put it another way, there are occasions when it's great to hear from the reasons we got into this business. People like Harry Harrison, Ron Lundy, Dan Ingram, Bruce Morrow, etc., etc., are still around for a reason.....they're still great on the air, and they make it fun to listen to them.

I really didn't enjoy the reunion this time around. I remember taping the first one they had. Perhaps, a lot had to do with the absence of Jack Spector. Too bad they ran the tribute at night, would have liked to have heard it

There was something in one of the papers re: Wolfman & Brucie, that they do have some kind of feud going.

And I do agree with you as far as Big Dan being one of the best DJ's ever to work NYC.

## 293. Buffalo/Toronto Radio Watch(6/16)

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: ag365@freenet.Buffalo.EDU
Message-ID: <3rttvp$763@vixen.cso.uiuc.edu>
Source record: 31385

Reply-To: ag365@freenet.Buffalo.EDU (Carl K. Gorney)

Up & down the dial in market #40 we go!

*The big story has to do with Jolene Baller,ex-news director and morning news reader for WGRF(96.9;97 Rock;classic rock). Last week,she refused to take part in a comedy "bit" regarding Christopher Reeve(what happened is that two 97 staffers were sent out,one as Superman and the other as a horse to get comments,and AM drivers Larry Norton & Marc Stout stayed in to joke about it), even after Norton repeatedly goaded her into joining in-saying at one point, "I'm sorry,but I can't be a part of such comedy." Baller left the show,but wanted to continue on a part-time basis at 97;however,she was told that the staff would be uncomfortable with her being there. Operations manager John Hager said Baller's doing part-time work wasn't a good idea and that they had no need for her in that capacity.(Baller's 2-year old son has cerebral palsy and currently can't walk. For her part,she said that "some things are more important than a job" and shrugged off praise,saying that in her 5 years,she had done some risque stuff,but that it was personal.)
The Coalition to Halt Hate Talk Radio,which came about last year thanks to the antics of ex-WGR talker Rich Michaels,is looking into the mess. Dr.Allan Korn of the American Jewish Committee(one group working with CHTR)said in Tony Violanti's story on this in yesterday's Buffalo News that Baller "took a stand and she shouldn't be punished for it."
What have Norton & Stout been up to lately? Well,how about running a Bloody Glove contest to mark the 1st anniversary of...well,you know the case. ;) Money was hidden in a glove,with clues given to find it. Plus,even new Buffalo Catholic Bishop Henry Mansell was mentioned-mocking the sacrament of Reconcilation and making fun of sexual perversion by some priests.(Gee,that's a whole bunch of fun. :>)
About Stout:he won't be long for Buffalo. A poster on Prodigy said that he is going to KOA in Denver.(Looks like Jim Kelly's top booster will get to do that same position with John Elway and cover its new NHL team,the Colorado Extreme(?). :>)

*More on Ron Dobson,WGR's new midday talker:he's worked in Sacramento at KSTE(Talk 650)as well as Portland,Ore.,San Francisco & Detroit. He's coming in from Sacramento(I'd love to know where). Since we have contributors from the areas I noted,how about some background on what to expect?

*Back to Mansell:WBEN(NewsTalk 930)covered the installation on the area's 12th Catholic Bishop in its entirety,with Tim Wenger & Susan Rose(who handle Buffalo's Evening News)anchoring it,and a number of reporters(including Brian Meyer)on scene. Father John Mack,a teacher at Lancaster's St.Mary's High School,provided commentary. It was fed to a number of stations,including Jamestown's WKSN(1340),Olean's WMXO(101.5),Dunkirk's WDOE(1410),WHLD(1270)

and Wellsville's WJQZ(93.5). WGR did live coverage,but didn't break away from regular programming for it.

*Around the state:
-WRDS has signed back on in Syracuse at 102.1 FM with all-satellite programming,running Tom Joyner's AM drive show from ABC and the ABC/SMN urban AC format known as the Touch. Robert Short is the owner,as well as the GM and operations manager.(What should be fun is when WOLF jumps from 1490 AM to a new FM frequency owned by its GM,Butch Charles,later this year.) Also of note: Jim Radford is the new PD at WYYY(Y94;AC),replacing Alan Furst-who now becomes group PD of New City Communications(owners of Y94,and WSYR(570; N/T)and WBBS(B-104.7;country). Radford arrives from KOOJ in Riverside,CA.
-In Albany,WGNA-A/F PD Jon Allen leaves to take a new job-location unknown. Fred Horton,OM of co-owned WPYX(PYX 106;AOR),will oversee 'GNA for the time being.

*Across the border:
-A three-way battle is brewing over a new FM freq at 93.9 in Fairport,PA (near Erie,in the NW corner of the state). Two interests have applied for 6 kW of power with a 100 meter(abt.400 ft.)antenna,the third will put in a 79 meter stick. The third happens to be Richard Rambaldo,who owns 3 stations in the Erie area(two in the town of North East;WRKT(100.9,AOR;Rocket 101)and an AM(no idea on the calls,freq.& format,plus WRTS(103.7,hot AC;Star 104-licensed to Erie,but with offices & studios at 1 Broadcast Park in N.E.) Guess who's going to get the license? :>

## 294. French-language radio meeting Sunday 6/18 in DC, you're invited

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: dehnel@ix.netcom.com
Message-ID: <3rttvq$765@vixen.cso.uiuc.edu>
Source record: 31386
Cross-posted to: rec.radio.broadcasting,rec.radio.noncomm,alt.radio.networks.npr

If you are planning on attending the Public Radio Conference in
Washington, DC, we think that you might be interested in coming
to the Francophone Broadcasting Corporation's meeting this Sunday.

The Francophone Broadcasting Corporation was founded last November to
assist producers of French-language programs in every aspect of radio
production. Our non-profit organization aims to provide training, help
in launching a show, and distribution and exchanges of music, news, and
magazines. We receive assistance from the French government as well as
logistical support from Radio France Internationale, but we are a fully
independent corporation run by member stations for the purpose of
serving their interests.

Our current membership includes 16 stations from around the US which
broadcast to the diverse French, Canadian, Cajun, Franco-American,
Haitian and other communities around the country.

The FBC is pleased to announce its first annual meeting Sunday, June
18th at the Renaissance Hotel (999 9th St. NW) as part of the Public
Radio Conference (note however that PRC registration is NOT required to
attend our meeting.) The meeting will be held from 1 to 5 pm.

The agenda will include a presentation of the FBC, projects of member
stations, and a forum for current and new members to exchange
programming. A cocktail reception will follow from 5 to 7, courtesy of
the French Embassy. Both the meeting and the reception are open to all,
and will be held at the Renaissance Hotel.

If members of your station would like to join, or just find out
about the opportunities the FBC can provide you, feel free to drop in!

See you Sunday.

## 295. Nashville RadioWatch

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: mdonegan@edge.ercnet.com
Message-ID: <3rttvq$766@vixen.cso.uiuc.edu>
Source record: 31387

Nashville's top rated morning show host is changing sidekicks. Longtime WSIX-FM (country) announcer Paul Randall is leaving the Gerry House show to become a car salesman. He will be replaced by Mike Bohan, a former weekend weatherman, movie critic and feature reporter for WSMV-TV in Nashville. Randall had been with WSIX for 18 years.

WWTN-FM (talk) sports talk show host George Plaster has been named play-by-play announcer for Vanderbilt University. He replaces Wes Durham who leaves Vanderbilt for Georgia Tech. Plaster is a former play-by-play announcer at the University of Memphis. Gaylord Broadcasting recently purchased WWTN. Gaylord also owns WSM-AM/FM. WSM-AM carries the Vandy games. Plaster will continue his talk show at WWTN. Gaylord is among the parties trying to move the New Jersey Devils hockey team to Nashville.

The Sports Channel on Long Island ran a feature story on WKDF-FM (AOR) morning show hosts Big Dave and the Dook, who published an ad in the New York Post soliciting calls from New Jersey Devils fans. The duo also held a pro beer rally in front of the site of the new Nashville arena after church groups opposed beer sales at the arena. The Nashville council approved the beer sales.

## 296. New England Radio Watcher: WUAE is on

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3rttvr$767@vixen.cso.uiuc.edu>
Source record: 31388

*From our Southern Rhode Island department: WUAE-FM 99.7 in Wakefield RI is on the air. The station is the latest project of Bear Broadcasting, which just last week closed its sale of WWRX-FM 103.7 Westerly-Providence to Radio Equity Partners.

WUAE doesn't have WWRX's earth-shattering signal, but it seems to be getting out pretty well for a straight class A. (It shares WWRX's site in Exeter, RI).

The format is modern rock (the second in Rhode Island, after Brown University-affiliated WBRU 95.5), and the non-ID is "The Edge."

Bear still owns WHIM 1110 in East Providence and WERI 1230 in Westerly as well.

# 297. Tampa-St. Petersburg; Dallas Townsend

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: JeffM@sanctum.com
Message-ID: <3rttvt$769@vixen.cso.uiuc.edu>
Source record: 31389

Tampa-St. Petersburg news. . .The FCC has modified the license of WDUV(FM) Bradenton so that the station will move from 103.3 to 103.5 and change from Class C1 to C. The station, which currently has an easy listening format, will be purchased by Jacor Corporation, which also owns local stations WFLZ (93.3 FM) and WFLA (970 AM). Jacor will move the station to Tampa.

Some other FM's here hope to upgrade also. Citicasters, which owns WXTB (97.9) has taken over programming of 105.5, a Class A station, which formerly was nostalgia WGUL-FM. The station is now Thunder 105.5, with a classic rock format. They hope to be able to go to 100 kW, once a co-channel station in Sarasota moves to 104.3 and other changes occur. Meantime, WGUL's nostalgia format is heard on 860 AM and an FM WGUL plans to purchase, a Class A on 96.1 licensed to Dade City.

WISP (98.7) in Holmes Beach will get something of a power increase, but it will require co-owned WKTK (98.5) in Crystal River to reduce power.

There are two other proposed FM upgrades, but as far as I know both are currently bogged down: WLVU-FM Holiday which hopes to upgrade by moving from 106.3 to 97.1, and WSRZ Sarasota which hopes to upgrade to Class C2 by moving from 106.3 to 106.5.

I'm not qualified, by the way, to become an official radio watcher, since I only work part-time in radio (at WGUL) and I'm usually the last person to find out what's going on in this market.

But I would like to mention the death of a famous broadcaster who I believe had been living in Sarasota since he retired. Dallas Townsend, who anchored the CBS World News Roundup on radio for 25 years, died on June 1. He died of injuries suffered in a fall while he was visiting his daughter in Montclair NJ. The World News Roundup with Townsend was a 15-minute broadcast each morning at 8 a.m. Back in the 1960s a local station that carried the WNR did not air commercials during the three optional one-minute cutaways; during that time Townsend (with his powerful, booming voice) continued reading stories, so I was able to listen to an uninterrupted fifteen minutes of news. Townsend was 76. He joined CBS in 1941 as a newswriter.

Reply-To: lhharris@aol.com (Lhharris)

I'm working on an article for a trade publication and I have some questions for anyone who is currently involved with, or has been involved with WYBC-FM at Yale University.

This is a pretty interesting operation for a college station...not only is it commercial, it is automated, (SMN's "The Touch", I believe) and has a sales marketing agreement with WPLR, the album rocker in New Haven.

At least parents paying that enormous tuition don't have to worry about their kids wasting time doing shows at the campus station.

Not your standard college radio, but then Yale is hardly your run of the mill institute of higher learning.

Uh, when did radio need to make a comback?

For years, I've insulted program consultants at NAB conventions by suggesting in their high priced
seminars that AM isn't dead. It's just that most AM programmers are brain dead.

Like real estate, AM sought its value and when prices got low enough, folks like me bought in and are
doing real well. And I'll be out there "www.ktrt.com" using realaudio and making money, too.

See you on the radio!

Bruce Williams is incredible. At the end of the day, in the evening when you've already listened to 8 & 1/2 hours of your (local/national) (liberal/conservative) talk radio, its great to be able to listen for some 3 hours to calm clearheaded talk and actually learn something you can USE for yourself. I've been a fan of his for some 10 years.

Anyone have any favorite Bruce stories?

Like the one when he told how he locked himself out of his home studio in Florida (during a program break!), had to break the sliding glass door to get back in before the break ended, and some neighbor watching it all called the cops! To convince them he wasn't a burglar, he pointed to the picture of himself on the wall in the studio!

And when you can occasionally hear his dog snoring in the background......

On top of the human side, he gives out good advice and when he doesn't know he doesn't try and fake it... he calls out for experts in the audience to contribute.

Back when Limbaugh was cutting his teeth nationally, he'd do an occasional impersonation of Bruce Williams...("Buy an IRA.. Buy an IRA...") that was dead on.

I'd vote for him in the Radio Hall of Fame if I had a vote.

# 304. Byron MacGregor, Broadcaster & Voice of the "Americans"

Newsgroup: rec.radio.broadcasting
Date: 1995-06-17 00:00:00 UTC
From: ab387@detroit.freenet.org
Message-ID: <3rtu03$76h@vixen.cso.uiuc.edu>
Source record: 31396

Reply-To: lewismik@metronet.lib.mi.us (Michael Lewis)

*** A Thank You from his family to his many friends on the Internet ***

Michael Lewis has sent along your many kind messages and condolences on the Internet these past few months. Byron's sudden death in January stunned us... and we wanted you to know that your thoughtfulness and warm memories are helping us through this incredibly difficult time.

To know he touched so many of you in so many positive ways is truly a tribute to a man who not only made his mark in broadcasting, but tried to make a difference reaching out to help so many others in need.

THANKS SO MUCH!!

The family of Byron MacGregor

---

Which reminds me... as RADIO celebrates it 75th ANNIVERSARY...
Byron MacGregor has been nominated for induction into the RADIO HALL OF FAME... located in the MUSEUM OF BROADCAST COMMUNICATIONS in Chicago. And it would be great if we could lend our support and send in our votes to insure his induction.

Byron has an enormous impact on the airwaves and would be a deserving recipient of this honor. By the way, I've also obtained a revised bio that I'd gladly share via email with those without WWW access. Otherwise you can access it on the Radio/TV Dial Pages at:

http://nether.net/~mikel/radio.html

The MUSEUM OF BROADCAST COMMUNICATIONS has informed us that you can still become a member of the Museum if you join by Friday, June 16th. If you meet this deadline, you will be eligible to vote in this year's RADIO HALL OF FAME ELECTION. In addition, your membership entitles you to many perks. You must get your tax deductible contribution in by the deadline.

These go to: Katy Roan
Museum of Broadcasting Communications
Chicago Cultural Center
Michigan Avenue at Washington Street
Chicago, IL 60602-3407

(312) 629-6014

This can be done by check or charge.

Remember, this year is the 75th Diamond Anniversary of Radio... and since Byron spent 13 years of his career at America's oldest commercial radio station (WWJ NEWSRADIO 950 in Detroit)... it is fitting that THIS be his year for induction.

Thanks and don't forget to vote for out friend BYRON MacGREGOR!!!

Message-ID: <3rtu05$76k@vixen.cso.uiuc.edu>
Source record: 31398

In article <3rdb36$8lj@vixen.cso.uiuc.edu> clarkepxy@aol.com (Clarke PXY) writes:

>No, my original message referred to the old WQIO-AM 1060 in Canton, which
>was Top 40 from about 1977-81, then Country after that, and eventually was
>sold and ended up as WRCW with an all-over-the-road format.

I believe the Akron Beacon Journal's radio listing these days refers to it as "adult contemporary mornings-middays, talk after 2 p.m.". That talk was, at last check, mainly Chuck Harder's "For the People". I visited WRCW back about 2 years ago and they're still broadcasting from the same old building a couple of miles south of Belden Village Mall. Probably the same equipment, too.

>WQIO, a/k/a "Q-10," was a helluva Top 40 station in its heyday (especially
>for a daytimer in a market that size) and was programmed by Ron Foster,
>who came there from WFMJ-AM in Youngstown, I believe.

That wouldn't happen to be the same Ron Foster that shows up afternoons on ABC/SMN's Pure Gold 24 hour format, would it? Incidentally, another former WFMJ PD was my first PD in this business - Steve Fine, who was last spotted at WRRO/Warren as PD there.

(re: 360 Systems DigiCarts)

> Gripes: 1. Bernoulli disks can go bad! Often times in a place where you
> had recorded material. When this happens, you can't copy the
> spot to the hard drive.

When we first got our DigiCarts this started happening to us; after 3 months 3 of the disks mysteriously became unusable. They'd even lock up the DigiCart; you'd have to power it down and back up and that would re-arrange the spots in a random order.

I did some investigation and traced the disk problem to _fingerprints_. As you insert a Bernoulli in the DigiCart machine, a spring-loaded cover opens, exposing the disk surface. It is very easy for an operator to touch the disk surface with his finger; if he does, oil from his finger will contaminate the disk. There's no way to repair the damage that I can find.

Once I told our programming people what was going on, the disk problem disappeared.

The random re-arrangement of spots on a disk only happens with DigiCart I firmware; if you upgrade to DigiCart II firmware you won't have to worry about that any more.

# 308. Kansas City Radio Watch (17-Jun-1995)

Newsgroup: rec.radio.broadcasting
Date: 1995-06-19 00:00:00 UTC
From: transvox@interstate.net
Message-ID: <3s36vf$o9t@vixen.cso.uiuc.edu>
Source record: 31258

Written June 17, 1995

DUOPOLIES MEAN MORE BUSINESS FOR MOVERS

Kansas City radio stations are keeping movers busy, as new duopoly partners seek bigger quarters.

The first move, as reported earlier this spring in AIRWAVES, occurred with the move of some KCMO-AM/FM functions to Bonneville's KMBZ(AM)/KLTH(FM), which purchased the stations in 1993. Bonneville has completed an expansion of its existing facility in Westwood, Kansas, just across the state line from the Country Club Plaza.

KCMO(AM)'s on-air operations will move this week from the Manor Square facility in the Westport district of Kansas City, Missouri into the newly expanded Bonneville facility. KCMO-FM moved earlier this month. Before its move, KCMO-FM DJs taped their shifts on hi-fi VCRs. The tapes were plugged directly into KCMO-FM's Union Hill transmitter during the move, and no one listening to "Oldies 95" knew the difference!

An open house is planned at the Westwood studios (and KMBZ transmitter site) this summer.

Once the Manor Square facilities are vacated, WDAF(AM) and KYYS(FM) will begin to prepare for their move into the former bakery, slated for completion by the end of August. WDAF's present building on Signal Hill will be taken over by WDAF-TV, which is now under different ownership. WDAF-TV staffers have told me the TV station needs the extra building, adjacent to its original facility, because it's bursting at the seams with all the new employees added for the expanded news schedule instituted when Channel 4 switched from NBC to the Fox network last September.

The Kansas City Star is reporting additional moves generated by this year's newly formed duopolies.

As speculated earlier this year in AIRWAVES, KBEQ-AM/FM moved out of its longtime facility on the Country Club Plaza to KFKF's quarters just east of the Plaza. KFKF had been running KKCJ(FM) out of the same facility; with KKCJ's sale to KCFX(FM) owner Heritage Media, there was plenty of room for KBEQ-FM. KBEQ(AM), still rebroadcasting Chuck Harder's People's Radio Network, probably could fit in a closet.

After buying KKCJ (now smooth-jazz KCIY) from KFKF, KCFX(FM) decided to move the two stations into KBEQ's former quarters. The Heritage stations will beginning moving from their present suburban Overland Park, Kansas location this week, according to the Star.

STAUFFER SALE COMPLETED; BROADCAST PROPERTIES GO ON THE BLOCK

Morris Communications of Augusta, Georgia this week completed its purchase of Stauffer Communications of Topeka, Kansas. Stauffer was the longtime owner of WIBW-AM/FM/TV in Topeka. WIBW(AM) is the flagship station for the Kansas City Royals baseball network.

Morris president Paul Simon said in an announcement that Morris plans to sell Stauffer's broadcasting operations. A waiver would have been required for Morris to keep the Topeka stations, because Stauffer also owned the Topeka Capital-Journal.

WIBW-TV, the only commercial VHF station in the Topeka market, is a tremendously profitable operation, and should be easy to sell. WIBW(AM), however, has to turn over five hours of time each weekday afternoon to Kansas State University station KKSU(AM) in Manhattan, an arrangement that's been in effect since 1929. That could make a sale of the AM and FM difficult.

Stauffer also owned KGNC-AM/FM in Amarillo, Texas, and TV stations in Columbia, Mo.; Santa Maria, Calif.; plus a network of TV stations in Wyoming.

KPRS WINS SMALL BUSINESS AWARD

The Carter Broadcast Group, owner of urban-contemporary KPRS(FM) ("Hot 103 Jamz") and gospel KPRT(AM), has been named one of the Greater Kansas City's Chamber of Commerce's Top Ten Small Businesses of 1995.

Carter Broadcast Group president Michael Carter, grandson of the station's founder, won the award both for the station's extensive involvement in community service projects and its success as measured by audience ratings. KPRS consistently is positioned near the top of the Arbitrons; in the last book, it was number 2.

A Kansas City Star profile of Carter credits him with much of the station's recent success. According to the profile, when Carter took over the station in the mid-1980s, he ditched an automated format and began to promote the station heavily. Ratings and advertising success followed.

Personal observation: The only bad thing about KPRS ("Hot 103 Splatterz") is its engineering. It has to have some of the worst-sounding audio I have ever heard on any station anywhere (and it appears at two or three places on the dial in most of Kansas City). KPRS also seems to have trouble with giving legal IDs during its "Breakfast Brothers" morning show. None of that, of course, has hurt KPRS' success.

ILLEGAL SIGNOFFS AND OTHER OBSERVATIONS

Now that KCXL(AM) has fixed its automation and is signing off properly, I have found yet another automated daytimer that can't seem to sign off properly. When the clock hits 8:30 each evening (15 minutes before average local sunset at Kansas City), all-sports KCTE(AM) just pulls the plug. No signoff, no legal ID, nothing. It just goes

silent in the middle of its satellite feed.

Observed on the FM dial:

* Non-commercial "educational" gospel broadcaster KBUZ(FM) in Topeka
is now relaying the American Family Association's WAFR(FM), owned by
right-wing crusader Donald Wildmon.

* Junction City's KJCK-FM, the anomaly of the plains (a high-energy
contemporary-hit station in the middle of Kansas? Well, they've been
doing it for years), is opening up a studio in a Manhattan, Kansas
shopping mall. "Power 94.5's" on-air announcements encourage listeners
to visit the studio in the Manhattan Town Center, which will be used for
frequent remote broadcasts.

* Best liner of the week also comes from KJCK-FM:
More than just a letter of the alphabet...Power 94.5!

A ST. LOUIS NOTE

A KDHX(FM) volunteer reports the resignation of the community-access
station's manager, Georgette Bronfman; its program director, Jean Ponzi;
and its office manager. Morning show host Roy St. John is now the acting
program director. Aside from a couple of changes in weekly programs, the
KDHX program schedule has not been affected by the moves. (Thanks for the
tip--KDHX is on 88.1, as is Columbia's KCOU, so I don't get to hear it
very often!)

Reply-To: markndark@aol.com (MARKNDARK)

KXYQ-FM made a sudden format change Thursday night 6/15 just hours after it changed hands to new owner Heritage Media Corp.

The new format is classic rock...the new name is "New Earth 105".

KXYQ had been an AC formatted station. Heritage Media also owns oldies stations KKSN AM and FM. The KXYQ was sold for 7 million.

Two longtime Portland radio people were fired...PD Alan Lawson and morning news anchor Marie Dodds. So far no live talent has appeared on the New Earth 105. Mark Shands/New World Communications/Portland (MarkNDark@aol)

## 310. Psychedelic shows?

Anyone familiar with any local or syndicated radio shows specializing in psychedelic music? Do you run one? Do you produce one? Can you make a dub available?

Tom Richards

## 311. Looking for BLB Radio in the area of Boston

Newsgroup: rec.radio.broadcasting

I am looking for a Radio station called BLB (I think this is the name). It must be a local radio-station in the area of Boston.
One of the morning show presenters is Bill. (I only know his prename) And a couple of month ago there was a DJ called Rachel Smith.
Perhaps someone knows this radio-station. Perhaps I do not have the right name.
But I am interested in Adress and/or Internet-adress.
Perhaps you can also give me a phone number.

Yet another one of those nifty tales of woe that come from having ancient equipment...

I got hired on at WMNF FM in Tampa as the second CE. The first guy had never seen a broadcast facility before, and had wired the place like an experimenter's kit from radio shack...

To start with: they put the station on the air for $20K total. That included buying an army surplus transportation trailer for the transmitter.. Used Heliax, a used antenna.. and <gasp> a very very very used Gates transmitter. WMNF rented space from WTVT on their standby tower. They got 6 months for free, then started paying heavy tower rent...

Well, installation was described for me by the station manager, Lia Lent. Lia was an interesting woman. She climbed towers. Their CE didn't. (I think he was the bright one..) -- Lia and Rob Lori and a few others got all the stuff together to put the station on the air.. They called WTVT to see about what they had to do to mount the antenna, and got told to call the "official" tower crew. They called the crew, and got told "oh, that's about $5K per day plus transportation.. Figure 5 days to get everything up and tuned up right." Well... they had $150 in the bank. The tower crew was out.

They could afford some rope and pulleys, however. Somehow, they got the heliax spools up on a stand where they could pull the cable off the wood... and got the antenna stuff laid out around the tower where they could grab it... Lia climbed to the 700 foot area, and hung one of the pulleys, and fed a rope thru it.

Rob tied one end of the rope to his car bumper.. the other end to the antenna. (This had a many hundred pound power splitter with the 4 bays)... and drove off... The folk were brilliant.. Rather than ruin that cable, they carefully unplugged the antennas from the combiner, and lofted that separately. However, they didn't mount the antenna bays at any specific spacing, nor did they use the stand offs that came with the antenna.. apparently the hardware either didn't fit the tower, or they didn't know what it was for...

They then lofted the power splitter, and lia mounted it to the tower.

At the 600 ' level.

They then did the same thing with the heliax... routing it *into* the tower.. so it came off the spool, and did a SHARP upward turn to go up to the power combiner. Rob did his driving bit again, with Lia at the 600 foot level.

The engineers from 13 stood in their doorway waiting for the tower to fall over.

They got the line up there, and tied down to the tower.. They also had enough spare to allow for a nice loop outside the building, and a big loop to the rear of the trailer inside it. Neat. Lightning reduction!

About 4 months later, the splice did a 10' melt down. Somuch for the big outside loop, and part of the inside.. So much for the lightning reduction. <sigh>

It did it again 1 year later. Lia fixed it again. This time they rolled the trailer a little (stretched the hell out of the phone lines and power drop).. but kept everything together. A year later, they bought new heliax when it melted again....

(I don't climb towers.)

Oh.. and the first CE had no idea was SWR was.. and there was no real SWR monitor on the ancient gates.. at least nothing that worked...

The gates is the real story, however. That, and their studio held together by termites holding hands....

The gates was about 6th hand. It started life off near the bottom of the band, and from the paper work that came with it, it had visited stations all up and down the Mississippi, and finally ended up retired from a place it had melted down at...

That model of gates had a quick pop-off assembly for the cavity plate. Really neat. If you wanted to remove the cavity cover to get to the tube, you could do it in under a minute.

Unless there was corrosion on the steel wool they used. Then the back plate resonated at about 2 gig.. mabe 5 gig..

Naturally, not much of that went out the heliax, so a lot of warmth got generated.

The symptom? Full plate current.. full plate voltage.. no output. Apparently that transmitter had pulled the stunt on EVERY owner before WMNF got it. And it did it to me. Almost.

I walked into the station as the "Italian Show" went on the air, and checked out the remote as I am prone to.. looked at the readings... and almost fainted.. *500* watts out.. about 14K in! I told the DJ.. You are shutting down NOW. Give a station ID, and shut the transmitter off.

He started another record, then started reading PSA's about meetings.

I reached over an said.. "WMNF must leave the air due to technical difficulties.. WMNF FM TAMPA." and killed the plate. The Italians were VERY pissed. However, I figure I saved the station about $2K at that point. Turned out later that the Italian show folk were selling advertising (and pocketting the money)... which most of us couldn't tell because we didn't speak Italian.. <groan>

I went out there (after pulling the remote's phone wires so they couldn't turn it back on..) and found the tuning assembly blue... and still cooling.

The entire output assembly was silver plated copper.. It was now blackish in places, having been very warm.. It also had some real melty looking spots.. I disassembled the thing and carried the corpse into the theater where they were having a fund raiser...

Lia was there with the bluegrass folk.. She and I ended up showing the audience the tuning assembly.. and raised another $800 that night.. which was almost exactly what the local silversmith charged to replate the thing.

I ground the back plate to remove the old steel wool junk, and ended up using sheet metal screws to put the thing back together temporarily. It worked for at least 4 more years that way, and seemed to be a LOT more reliable after that incident...

We were in the middle of tapping the holes and mounting proper hardware when my office moved 70 miles away, and I had to leave the task for the next CE.. Great fun while it lasted...

## 314. Even more broadcast blowups

Newsgroup: rec.radio.broadcasting
Date: 1995-06-19 00:00:00 UTC
From: RobABass@aol.com
Message-ID: <3s36vl$oa7@vixen.cso.uiuc.edu>
Source record: 31264

This is an interesting topic, actually.... I always get interested whenever something goes down in radio...

Although I haven't seen an x-mitter blow up yet, here's what I have seen.

I work p/t for a NCE station (it's not an NPR station... so please don't bash me about government funding)...

Anyway... a couple of years ago, during the week of thanksgiving, we had some ice form on the tower and also a lot of it on the ground (by the way, this station is in Texas). Well, towards the weekend, I noticed that one night, the reflective power started to slowly creep upwards.

The station operates with an xmitter output of 34 kW, and an erp of 61,000 watts.
So anyway, the reflective power just keeps on creeping and creeping. It got up to 200%. (yeah thats right...)

So the techs come out, take the 15 minute elevator ride up the 514 ft tower, climb up to the antenna, and find that an element had been sliced through... They "claim" it
looked like it had been done by lightening, but whats funny is that we didn't have any t-storms that week.

The only "other" blow ups we have had, are fuse blows in the main studio board. although there was that morning I was working when the lights on the board flickered out a couple of times and then I smelled smoke.

They found 2 inches of dust in that thing, and a fried part on one of the sliders. Our biggest probelm now, is our friend "static electricity". It's fun, and you never know what it will do next. It's been known to start a CD player, of all things. Now we spray the carpet with fabric softener.

Now I have been told that just the other day, condensation started dripping out of the
a/c vent on the ceiling (can you guess where the a/c vent is located...? if you said
"over the board, right..?" you are very close)

If this was a PBS station, we outta have kids come up there and get Mr. Rogers to say to them "can you say fire hazard?"

There's one other thing that happaned to me a long time ago. I used to do a show on weekends. Most of my music came from my own collection. I had just bought a copy of the New Kids On The Block song "The Right Stuff". It was a 45 r.p.m. single. (remember those..?)

We had two turntables in b-cast. It didn't make one bit of difference which one I played that record on, it "always" skipped, and it was never at the same spot on the record. I'm thinking the only thing that could have caused this, was the turntable not having any taste for the New Kids...

This was the only record that I saw this happen with, and no it wasn't warped

OK and this is the last story, because I know you're getting bored... Ever had an occasion when you had rewound an open reel tape, and when you hit stop, the brakes on the machine were so tight that it chewed up the tape between the flangs of the reel? Yeap... I've been there and done that... Didn't notice it either until the reel was playing a song. When I did finally see it, "Oh please... not during this song... please please please...! not during this song... I'll do anything if it doesn't jam up on this......errrpppp"

Shoot......

Thank goodness for CD's.... although they start skipping when we rewind open reel tapes where the machines are in the same rack mounts as the CD players... When will we ever learn?

Tell me about it, I fell asleep with the radio on.

> I enjoyed a lot of this weekend, but I was sorely disappointed with the
> huge amount of time they gave Charlie Greer. I grew up on WABC and
> wasn't that crazy about Charlie and his endless Dennison commercials back
> then.

Charlie has been in ill health for the last 10 or so years. Every time we think he's going to leave us he bounces back better then before. It really wasn't the time slot that was long, it was that all the other WABC jocks wanted him to sit in on their shows that made it seem like he got a big time slot. Given Charlie's health situation, you can't blame them for wanting to grab every minute they could with their friend.

> I also didn't understand Cousin Brucie's carrying on about Wolfman
> Jack. Was there supposed to be some kind of tension there? It was much
> ado about nothing.

There was nothing to really discuss there. It would have been up to the Wolfman to work out some banter on his portion of the weekend, but he too is not in the best of health and saves up all his energy for his on air gig. If you notice he did not talk to anyone but his own producer. What he did do was something that they never do in New York radio, but you find it every weekend in Philly and So. Jersey. He led the live audience when they were playing "sing along" and dance records AND he opened the mike to let the audience hear what was going on.

> BTW...for those who were recently asking about Chuck Leonard, he did an
> hour shift from the studios and also appeared at the Museum.

Chuck was also back on his regular WBLS slot on Sunday afternoon and I heard him on an overnight on WQEW during the week.

I thought I'd weigh in with my opinion about last weekend's event--

I'll be honest, I didn't listen--I was working and did the family thing. One of the reasons is it has gotten a bit 'old hat'. While I'm not pooh-poohing the idea, they never live up to the first one. 1984 was the first time they did it, and it marked Dan Ingram's return to the airwaves after leaving WABC in 1982. He and all the personalities made the weekend special, (I especially enjoyed Herb Oscar Anderson's reflections about the Vietnam War and his feelings when a vet called up, and Joe O'Brien's Beatles memories.) but as the years have gone on, it just hasn't been the same, even though the lineup has changed. Perhaps one of the reasons is I was a little young for the WMCA/WABC/WINS war--I remember WABC from the 70's. The first one also marked the first time the Good Guys shared the mikes with the MusicRadio guys and the behind-the-scenes stories of the battle made it fun. That was before Rick Sklar and Cousin Brucie wrote books about it, and CBS-FM became the stomping grounds for Harrison, Lundy, Ingram, Morrow, Spector, & Baer (fill-ins). Another first I heard--WOGL in Philly's Reunion weekend in 1993--George Michael led off Friday 3-6p - That was a great show! He hadn't done radio in a decade but you wouldn't have known it. I wish he'd do the NYC reunion. One thing perhaps CBS-FM might consider--since it's been an oldies station for 25 years, they should bring back some of their personalities, like Dick Heatherton, Jack Miller, etc.and do a special salute to the history of the station weekend.

Just my thoughts--don't shoot the messenger!

From: stellastar@aol.com
Message-ID: <3s36vo$oab@vixen.cso.uiuc.edu>
Source record: 31267

One good way to do community ascertainment: each broadcaster in town sends a representative to one well-planned date and place. After a bit of introducing and chat, invited community leaders each take a scheduled segment of time to talk about issues they're interested in, and answer questions from the radio reps. Representatives include managers, PD's, Public Affairs directors if they have one, or just anybody from the station capable of taking some notes.
It's a nice way for everybody to get the data at the same time, from minority concerns, to local unemployment stats to government action. Also a great networking opportunity for people who often don't get to know their competition very well on a companionable basis.
What to do with it: another station, in another market where I worked, made out a form listing the top ten concerns noted during ascertainment interviews. Whenever a public affairs interview was done (and they were taped for weekly air in the usual Sunday-Morning ghetto) a copy of that form was filled out listing the interview guest's name, organization and contact phone & address. That was material for next year's ascertainment contacts. The topics of community interest that had been identified were checked off on the sheet, so there was a file showing what the station had done to respond and inform the public about those concerns. Nice way to keep focus on what you're doing, and why.
How NOT to do it: rules used to state you contact some community leaders, and some community members; if you pick a dozen Joe/Jolene Publics out of the phone book and call 'em, about all you'll get for community concerns will be barking dogs.

> What do you think about this? In 1995, are community ascertainment
>efforts needed? Useful? Necessary? Does your station perform
>ascertainment? Interview community leaders? Interview the general
>public? Who do you identify as community leaders? Does your station
>address community issues, needs and concern? If so, how?

I haven't had to wear a Public Affairs hat in many years (thank God), but I understand ascertainment of some sort is still required--it just isn't the formal process it once was. Our P.A. director still maintains an issues/programs list, identifying the top ten "problems and needs" of the community and what programming we have done to address them.

IMHO, nothing was more of a useless waste of time than the old ascertainment procedure. We'd get a bunch of so-called "community leaders" together, and they would always come up with the same "problems and needs," which any newsperson with half a brain would already know more about! I really got tired of hearing "crime, drugs, not enough for kids to do, and potholes in the streets." And that's all it ever was, except for occasionally some Chamber of Commerce type upset that we were even inquiring about "problems" at all.

Bottom line...formal ascertainment just caused more trees to be chopped down. If a station was going to dodge its obligation to serve the public, it still could, by doing minimal rip'n'read news, slapping together cheap and boring "public affairs" shows, and burying them at 4 AM Sunday. Stations that care about the community do the public service with or without ascertainment. It was true then, it's true now.

## 319. More EBS talk.....

Newsgroup: rec.radio.broadcasting
Date: 1995-06-19 00:00:00 UTC
From: RobABass@aol.com
Message-ID: <3s36vp$oad@vixen.cso.uiuc.edu>
Source record: 31269

OK.... after reading some comments on this topic, as per my original posting, I think it's very clear that EVERYONE is confused on the new EBS/EAS system. So, it's time for a little "test" if you will...

hhallika@slonet.org (Harold Hallikainen) writes:

>I think the word "must" is a little strong. The FCC in the discussion in the report and order (there's a pointer to it on my www pages) says they "strongly encourage" use of the 20-25 second tone during an actual emergency, but the rules themselves say the tone must be between 8 and 25 seconds. The encouragement didn't make it to the rules.<

Harold, if you still have your December 14, 1994 issue of Radio World magazine, I would "encourage" you to pull it out and read it. There is a lengthy article on the EBS/EAS system. In this article, it makes reference to how the FCC wants this to work. It says that the short tone will be used for tests, and it also says (and I quote) "The long, 25 second tone will be reserved for real emergencies".

Nowhere in that article could I find any statement saying that the FCC "encourages" use of the long tone for real alerts. My impression from how this piece was written, is that we will be "required" to use the long tone for emergencies.

Yes I read the relevant text that you included, and I must confess that I have not seen that arrive at the station I work for. I will inquire about it. In the meantime however, it is my understanding that we will need to do as I have stated. I would be curious to know if "The Report and Order" was issued AFTER the Dec 14th issue of RW went out.

I do anticipate that RW may run another piece on the EBS/EAS system in their next issue...

and george.randell@sbenorfolk.org (George Randell) writes:

>In fact the FCC deadline for changing your generator (tone encoder) to the 8 second tone is July 1, 1995. If you hear any stations using the long tones after that they are in violation.<

That is incorrect (the part about using long tones after July 1st), as you can see in Harold's inclusion of "The Report and Order". The report did not state that using long 20 - 25 second tones would be illegal (for emergencies anyway)

also, on a slightly related topic, stellastar@aol.com (StellaStar) writes:

>However, if lightning, Xmttr problems, or squirrels take you off the air, even for a couple seconds, you DO have to do an ID when you get back on<

Where does it say this??? I have never heard a station do this either, if they are only KO'd for a brief second or two. Sure if you get KO'd for longer than 30 seconds maybe, but some t-storms will knock off xmitters for only 1 to 5 seconds. If that happens repeatedly, the station personal are going to have way too many other concerns, to keep ID'ing the station after it repeatedly get's knocked off.

I want to know where in the FCC rules it says we have to do that.

Rob Bass

"All I wanna do is find out how a Dallas, TX station, gets away with conducting an EBS test at 7:30 AM!!!"

>

I believe the July 1, 1995 deadline is for DECODERS to be ablde
to detect the tones in 3 to 4 seconds. Stations MAY then start using an
8 to 25 second dual tone signal. The FCC encourages 20 to 25 seconds
during an actual emergency, but there is NO REQUIREMENT (as I read the
rules) for ENCODERS to be modified. That is entirely at station
discretion AFTER July 1, 1995.
A recent Radio World article says that an "FCC staff person" said
it was ok to modify encoders prior to the deadline IF all stations in a
market have their decoders modified. I can't find anything official
saying this. To make it so you only have to pull the EBS system out once
for modification, I'd probably make the mod now (both encoder and
decoder), then log the encoder out until July 1 (you can log it out of
service for up to 60 days, as I recall). Again, ENCODER modification IS
NOT mandatory.
Stations are supposed to have new EAS equipment by July 1, 1996,
but based on delays caused by the petitions for reconsideration of the
new rules, I doubt this deadline will hold. The FCC is currently not
accepting units for test, so manufacturers can't do anything.
By the way, the NAB Radio convention in New Orleans in September
will have a panel discussion on EAS and unattended operation. I've been
asked to be on the panel, and we'll see where these issues are at that
time.
I'd be interested in hearing people's comments on the NPRM on
unattended operation. Many of you have already read mine (in RW).

He's one of the more useful talk shows. Him and Laura Schlessinger. . .

You always come away from these shows *learning* something. On the other hand,
shows like Limbaugh , Leykis, etc. are sometimes entertaining, but you
get an awful lot of rhetoric and preaching to choirs there too . . .

## 322. Re: FCC AM Database FTPable

Newsgroup: rec.radio.broadcasting
Date: 1995-06-19 00:00:00 UTC
From: arog@BIX.com
Message-ID: <3s36vr$oag@vixen.cso.uiuc.edu>
Source record: 31272

The FCC's AM-Data-Base file has all Region 2 AM stations in it
and has serveral record formats, First a "header" format, second
a "Trailer" format, a basic record one and two suplitment formats
for DA's and Augmentations.

Each Record is about 600 CHARACTERS long and that can give you
an idea of how many Records will fit in over 17 Meg of expanded
file.

The file, as posted at ftp.fcc.gov is a *.gz file and needs
"gunzip" to expand it. The is a compression/expansion utility
developed by the Gnu Project folks and I *Praise* the Commision's
staff for selecting it as the compression tool.

At the moment, as I advised a fellow at the telephone number
in the support file last Wednesday, there is a "problem" in
some of the records in the AM-Data-File in that recent 'up-dates'
are placing hex "00" in a filler field near the end of some records
rather than a hex "30" or ascii "0". This can cause some data
base progams to Barf badly as they try and read those records.

The FM-Data-Base is of a different structure and appears to not
be subject to the errors of the AM one.

All said, I think that we need to say a Major THANKS to the folks
in the computer-room at the FCC for starting the process of putting
this information on The Net.

Alan Ogden

In article <3rkrv6$j3f@vixen.cso.uiuc.edu>, rcarpen@DGS.dgsys.com says...

>I was rummaging through the public on-line FCC info, and discovered that
>their AM database is now on-line. It is in the same directory as the FM

I got the FCC database files by FTP, and they do contain a tremendous amount of information. There are about a dozen files for AM, FM, and TV which unzipped add up to about 35 megabytes. One huge file--about 17 megabytes--contains the AM data, and that file is very difficult to read. It would be nice if someone could extract the more pertinent information and make a more usable file available for others.

I haven't done anything with the AM file, but I have extracted the Florida FM and TV data. The database includes applications for new stations, translators, low-power TV stations, and applications for low-power TV stations. I didn't realize till now that there are three applications for a low power TV station on channel 46 right in my neighborhood. Also, one can see the new four-letter calls that are now allowed for low-power TV stations. In Florida there are three: W34AD Key West is now WCAY-LP, W57BA Tampa is now WRMD-LP, and W61BL Tampa is now WVEA-LP. The data includes coordinates of transmitter sites.

## 324. Seeking Software to deal w/FCC station files...

Newsgroup: rec.radio.broadcasting
Date: 1995-06-19 00:00:00 UTC
From: rrb@clm.aiss.uiuc.edu
Message-ID: <3s36vt$oai@vixen.cso.uiuc.edu>
Source record: 31274

Hey there:

I want to contact someone who can write or direct me to, software (perl, C, Unix sh whatever) that can take the FCC station data (updated at intervals) and format it for inclusion in a web server.

I am interested in housing such a service and including it in the AIRWAVES home page. I am looking for someone who is prepared to actually code such a thing as opposed to someone who just wants to talk about it.

I understand someone has used filemaker pro or something like it to create some files, and I'd like to see if that can be incorporated into this project, but I am not in the position to buy commercial software and I wont use pirated software so I am looking for someone who wants to be the person to code the interface that places FCC station data on the web in searchable, readable, usable form. Full credit will, of course, be given.

Any serious takers?

## 327. headband radios

Newsgroup: rec.radio.broadcasting
Date: 1995-06-19 00:00:00 UTC
From: "wishn001@maroon.tc.umn.edu" <wishn001@maroon.tc.umn.edu>
Message-ID: <3s36vv$oan@vixen.cso.uiuc.edu>
Source record: 31277

here's a non-content radio question on the border of this newsgroup's focus. what the hell...

i am frustrated over the junk quality of headband radios. the AM/FM radios that go over your head, and sometimes have a rubbery antenna. i have owned about 8 models over the past four years. they all sound good to great. they are all junk receivers. i would appreciate any feedback (the moderator might request it direct mail rather than cluttering up the board) on headband radios that have even moderate selectivity and sensitivity.

example: i was at an electronics store tonight, and tested six models. the bottom of the line, about $20, was analog (no problem). the AM coverage was up to 1600 (no). on FM, there was strong intermod below 93 meg. on AM, nothing came in below 740 (a cheap-o will get five to seven regional signals in this top-20 market)

on the top model...digtal only, memories and a clock...wide-band AM, which means sound over reception...no FM mono, you lose the 3-thousand watt FM locals and rimshots when you turn your head (sorry honey, i have a stiff neck. can you talk into my left ear?)

bottom line...can anyone recommend a headphone radio which has reasonable selectivity and sensitivity on AM and FM? i don't care if it works buried in the sand or under water or on the long distance runner. i don't even care if it sounds like a concert hall. i want a radio that can hear. my imagination will supply the rest.

thanks, 73's and 88's de jw

## 328. Need address, or telephone number for R/TV Interview Report

Keep your eye out for the CCS unit which they claim will send and receive 7.5KHz audio via the regular old phone connection (they're back to calling it POTS). This would really be a great boon to the remote broadcast business, but I heard that a demonstration at the NAB failed to work...may be more sensitive than most to distance from the central office.

## 330. Stephen King buys two Maine radio stations

Newsgroup: rec.radio.broadcasting
Date: 1995-06-19 00:00:00 UTC
From: E Huret <ehuret@delphi.com>
Message-ID: <3s3701$oaq@vixen.cso.uiuc.edu>
Source record: 31280

Horror writer Stephen King, whose self-described taste for "Cro-Magnon rock and roll" first drew him into broadcasting, expanded on Friday his radio empire to three stations. King purchased WNSW-AM in Bangor and WKIT-FM, of neighboring Brewer, for an undisclosed price, according to The Zone Corporation - a holding company owned by the writer and his wife, Tabitha. King already owns WZON-AM in Bangor, the small central Maine city where he lives year-round with his family. King originally purchased WZON on Halloween 1983 and had it broadcast a rock and roll format. He sold the station in 1990 but regained control in 1993 when the new owner went bankrupt. The author said in a statement that he was dedicated to the communications business and to the community. King owns no stations outside of Maine. King said he plans no changes in the format of either WKIT, a rock station, or WNSW, a news-talk station. WZON has an all- sports format. REUTER

Jay Marvin wrote:

: I'll bet this show is gone in six months due to lack of affiliates.
: Anyone wanna bet?

Maybe, maybe not. Mario Cuomo is an ideal in several ways: his show would cover the block just before Rush, giving his affiliates a chance to balance their schedule. Who else is on 9-12 noon Eastern of any consequence nationally? Also, the times I've heard Cuomo he was a good listen. Now, finding someone to sell it to affiliates might be more difficult. How many people are good at affiliate relations who aren't already tied up in some deal?

>Anyone wanna bet?

When this program falls flat on its face, and it will, the former
governor will find some way to slip out of the deal and off the air
and blame someone else for the end of the program.

WABC in NYC is going way out of its way to make room for the program,
at the expense of "The James and Joel" program on Sunday nights.

With the advent of RDS, couldn't data signals with the station calls and city of license be considered adequate identification? Once RDS radios become widespread, the information will get across, just in a different manner. I don't recall anything in the rules that say the station ID has to be in English. After all, ethnic stations use their own language, and stations on other bands use morse code.

Just theorizing.

ID>Rather than syndicate, I was wondering if we could tape our shows and sell
ID>them as a subscription service to other stations. Has this been done? How
ID>would we go about starting this up. My co-host and I are new to the radio
ID>business and would appreciate your comments and suggestions.

Dave,
Save your money and time. With the amount of "free" barter
programming available, stations aren't used to paying for shows. They
give a portion of the hour's inventory to the syndicator in exchange.
Not only will the show not work on a cash basis, but you'll also be
offering dated material. Unless you've got a large stockpile of cash
you're willing to lose, stay out of the syndication business.

If you must syndicate, you might try one of the brokered networks
that charge you for the time and provide satellite channels. Also, ask
yourself which advertisers will buy the show before you've got 85%
coverage of the country. That's years away. Until then, it's your cash
going to someone else.

Rich

Reply-To: nickp@mcrfm.demon.co.uk

As usual, the UK is a bit behind the times but...

GWR-FM has opened the UK's first web-site run by a Commercial Radio
station..

the URL is: http://gwrfm.avonibp.co.uk/

Already there's pages of information on GWR-FM, the programmes and people,
pictures, and audio clips of the station.

As part of one of the UK's largest radio companies (the GWR Group), we
will be expanding the service to cover all 20 stations that we currently
operate.

Come and have a browse at radio on the other side of the pond!

> For what it's worth, WNYC-AM shares the site with WMCA, and is diplexed on
> the same towers.
>
> This would have been quite a coup for the station in its golden age.

Actually the coup was for WNYC. WNYC and WMCA once shared the frequency, and the frequency before that, and the frequency before that. There was always animosity between the 2 stations because of it. That included civil suits, requests for FRC/FCC action and WMCA once refused to sign off at the alloted time in order to let WNYC on the air. They finally got divorced when the NARBA frequency reassignments came down in 1941.

> I also hear that another legend, WADO, will also go up to 50kw, from its
> site in Lyndhurst, on Paterson Plank Road. Thankfully, they will keep
> their beautiful diamon-shaped Blau-Knox tower, which is one of only a few
> still in existence.

Lyndhurst is on the south side of RT3 on the other side of the sports complex. The Meadowlands complex itself is in East Rutherford. The north side of Patterson Plank Road where WADO and WKDM are is Carlstdat. If you look west from WADO you see a hill which is the residential portion of the town. From Main St. you wind up looking directly at the top of that tower. To put it mildly it is overload city with the existing 5Kw. If they do go 50KW they can expect a lot of trouble from the town once people's TV sets and computers start to go haywire.

Also the NJ Meadowlands Authority has juristiction over everything from the NJ Turnpike to Teterboro Airport and between Rt. 17 and the Hackensack River, (Rutherford, Lyndhurst, E. Rutherford, Carlstdat and Moonache). Since WADO is in that area they would probably be subject to the moritorium that they have on all radio station construction in the area if they need to add or move a tower. (Natrually they want the stations out of there so the property can be developed).

WKDM is down the road from WADO. Why not ask them what they went through, and how long it took for their predecessor, WBNX, to replace the center tower when it fell down. It was about a year if I remember correctly.

Or how about WINS, which is finally getting to start construction of new towers so they get their old pattern back. It was the construciton of one of the Meadloands hotels that wound up doing all sorts of thing with their signal that they had to drop down in power for a few years.

## 344. WEXP: Sign-off details

Newsgroup: rec.radio.broadcasting
Date: 1995-06-19 00:00:00 UTC
From: "Craig C. Bailey" <ccb@together.net>
Message-ID: <3s370d$obp@vixen.cso.uiuc.edu>
Source record: 31294

WEXP 105.1 FM (Burlington, VT/Plattsburgh, NY) said goodbye for good shortly after 12:00, Thursday June 15, 1995.

WEXP had been operated by UBC, Inc., but had recently been sold to Connecticut-based Hall Communications for $1.1 million. Hall formally announced its intentions to change the call letters (to WKOL) and the format (to oldies) the day before. (Though WPTZ-TV had made a similar report on Saturday, June 10th, after speaking with WEXP Station Manager, Joel Bolton.)

After a long, uncertain transition period leading up to the final announcement, Hall finally could not come to terms with any of the current EXP air staff. Five full-time jocks and a handful of parttime staff have been put out of work.

Many of the staff members (new and old) gathered at the station for the final hours. Though midday jock Jan Jacobs was on-the-air per usual from 10 AM 'til noon, many other staff members stepped up to the mic to say their goodbyes.

The final minutes were filled with "Golden Slumbers/Carry That Weight/The End" by The Beatles. Emotions were high throughout the room, and when Jacobs had trouble wrapping it up, Joel Bolton stepped in to help, finishing with the slightly sardonic legal ID, "This _has been_ 105.1 WEXP-FM, Plattsburgh-Burlington."

During our last days on the air-- and since signing off-- we've received many letters of support, sympathy and dispair. Many of those letters can be found at the WEXP WWW site, maintained by myself:

CCS has a new box out called the FEILD FONE. It a CODEC for POTS. It will send/rcv close to 8.5k with about 250-300 ms delay. The F-FONE works with V.34 (28.8) and has a build in mic/line mixer with a "near - mix" to hear local and rcv audio.
Good Luck.

Hi there,

Can anybody give me some usefull advice on Digital Audio Systems ?

We are about to purchase an ENCO DAD system (Hard Disk system with
touch-screen).

In the on air studio's we would support the DAD terminal with 3
MiniDisk players Denon DN980-F.

Any coments on this on functionality ?

Thanks already

## 351. DUOPOLIES, very, very DANGEROUS !

Newsgroup: rec.radio.broadcasting
Date: 1995-06-20 00:00:00 UTC
From: "PETER Q. GEORGE, N1GGP" <PGEORGE@WELLESLEY.EDU>
Message-ID: <3s62n4$gas@vixen.cso.uiuc.edu>
Source record: 31205

In the last three years, we have seen the result of near-total deregulation. Prices on all kinds of radio stations have shot up to near record levels. We are slowly but surely putting nearly all of the nations' electronic media in to the hands of a few investors who are only in the business for the bottom line. We are seeing a total homogenization of the radio industry to where "another ten-in-a-row, with no talk" is becoming the catch phrase in even the smallest American radio markets. It used to be, under the old rules, that every station had its' own unique sound. Take for example, Boston. This was an exciting radio market where both the AM and FM dials were alive, with LIVE people behind the LOCAL microphones. Today, except for the rare holdouts....chances are the station you listened to during the day....is probably automated and programmed by some service in Los Angeles. With technology being the way it is, it does make sense to cut down costs in not having to pay for a board op at night. But with the FCC slowly deregulating it self out of existance, the corporate elite is using its' vice-grips in destroying any integrity left in the American system of broadcasting. The corporate elite is putting the local system of broadcasting out of business. Giving all that power and influence to a precious few is dangerous. And now, the rules are being made even more lax with plans to strip away any limits on own many radio stations one corporate entity may own. The end result is MONOPOLY. All that power to one corporate entity which may influence public opinion with no checks and balances for other opinions in that market is DANGEROUS. Who knows how one possibvl
un-scrutinous operator could change public opinion with
no chance for rebuttal by differing opinions. No doubt, most operators are not like that. But in this ever changing world, who knows what lurks down the road.
Finally, allowing 100% ownership of any stations or group of stations by a foreign entity is suicide. What do we know about these people. What do we know that a foreign operator from a friendly nation would be like if that nation were to become less friendly. We saw that just before World War II broke out. Our national defense would be compromised. Don't laugh, it can happen. Don't forget, when a coup happens...what does the invading army take over FIRST.....the radio station.
I am 100% for the capitalist system, it works very well thank you. But without any check and balances to promote free-speech, of which is country is dedicated to....the public opinion could be squashed and some "NEW ORDER" could be instituted. Diversification is great idea, but put some something as powerful as broadcasting into the few selected people who can afford it and you might not like it. And that's 30, for this edition.

Peter Q. George, N1GGP
Randolph, Massachusetts

>
>Yes I read the relevant text that you included, and I must confess
>that I have not seen that arrive at the station I work for. I will
>inquire about it. In the meantime however, it is my
>understanding that we will need to do as I have stated. I would
>be curious to know if "The Report and Order" was issued AFTER
>the Dec 14th issue of RW went out.

The Report and Order was released December 9, making it difficult
to hit the deadline for the December 14 issue. In fact, I had an article
on the subject that ran in January that was STILL based on the News
Release from the FCC. I don't believe the News Release was a good
representation of what was in the Report & Order.
I have another article on EAS that RW has had for a few months
now. I hope they publish it soon. It gies a detailed analyisis of the
Report and Order, including the data format, etc. I'd suggest that
stations do what is is in the actual rules, instead of what I (or anyone
else) say in an article. I do try to make my articles as accurate as
possible, but it is STILL my interpretation of the rules. In my
articles, I always give source information on where to get the actual
rule, report and order, nprm, etc. The FCC DID have the EAS R&O at their
www site, but it appears to be gone now. I still have it on our fax
server (+1 805 541 0201) and will try to get it back up on our www server
(http://slonet.org/~hhallika/) when I get time...
I think the trade publications should be a starting point for
study of an issue. The final authority would be the appropriate
government document. Ideally, the Rules are sufficient, but often it is
necessary to go back to the Report and Order and previous documents (NOI,
NPRM, comments, etc.) to find the "intent" of the Rules. So... in my
articles, I'll always try to point you to the original documents and make
those documents easy to get by putting pointers to them on our www pages
and putting the full text on our fax server.

CRN International, a radio broadcast marketing company in Hamden, CT is looking for an experienced Affiliate Relations Director.

The successful applicant must have experience in or a strong knowledge of radio programming, promotion and spot sales; as well as direct experience in programming syndication clearance.

The position requries documented successful management experience as well as a thorough knowledge of the syndication industry.

The Director of Affiliate Relations manages an 11 person department and is a senior manager within CRN International. Good salary, outstanding fringe benefits, growth potential with a HOT company are just a few of the advantages.

If you are interested, or know anyone who fills the bill, please EMail me directly at dkalt@crnradio.com immediately.

> I understand that Houston's Classical Music Stations are dark as of a couple
> of weeks ago. Anybody know the whys and wherefores?
>
> Jack Moore
>

According to an article in the HOUSTON CHRONICLE, KRTS-92.1 Seabrook-Houston/ KRTK-97.1 Cleveland-Houston "K-Arts" let go of all their staff and said the stations ceased since they weren't making money due to their poor signals.

KRTS is 50kw and KRTK is 100kw, but they really don't cover the central and southwest parts of Houston very well (where most of their audience is probably going to be). KRTS is trying to go to 100kw, but that conflicts with AOR KTSR-92.1 College Station. KTSR is to move to 107.3 and 25kw, but they really seek to go to 95.1 and 50kw.

The article in the paper seemed to imply that if the FCC ever does reallot KRTS to be a C1, they might return. They also say KUHF-88.7 may pick up some of KRTS/KRTK's local programming.

That leaves only the city of Dallas-owned WRR-101.1 Dallas as the only commercial classical music station in the state now. WRR's fate is always is doubt since the some members on the city council are always trying to sell it (usually, WRR breaks even, so it doesn't lose money for the city, but it also really doesn't make any). The fear is that whoever buys it won't want to program the classical music format.

Chip

# 364. The next wave of Radio in a HYPERMEDIA world.

Newsgroup: rec.radio.broadcasting
Date: 1995-06-20 00:00:00 UTC
From: shemenwa@haven.uniserve.com
Message-ID: <3s62nf$gbk@vixen.cso.uiuc.edu>
Source record: 31218

RADIO'S NEW HYPERMEDIA ROLE

I take great pains to make sure that our radio stations are positioned as part of the new media
movement in North America. There are many people that would class radio as part of the older,
traditional media that will be replaced with all the new interactive forms of digital media. After
being in the business for a few years, I have seen radio respond and evolve to a changing
marketplace. Sure radio has been around for awhile but "you ain't seen nuthin yet!"
Radio has been evolving since it's inception. It is radio's inherent nature to be fast., flexible and
responsive. This industry culture thrives in technology advancement and change.

Since I started doing my cyber surfing of the Internet I have been constantly amazed at the
number of radio stations that have embraced the Internet as another marketing tool, or another
way to contact listeners. Last time I looked there was well over 500 radio stations in North
America on the Internet with some form of Web presence. In my continued research I have
found that america is bullish on radio. Radio stars have put radio in the face of the public and
very garishly asserted the position of this wireless medium strongly to advertisers and to
consumers. Radio is fun. Radio is interesting. Radio cannot be ignored.

Certainly I can see that the radio will change. Possilby the technology of distribution and
reception will change too. However the market is and will be saturated with radio sets. Radio
stations can take comfort in the fact that they will continue have a market as long as there are
cars that have radios and people that like listening to them. Because people bathe in radio there
will continue to be more radio sets than telephones and computers in most households. Of
course, the new and improved, phosphate free, environmentally friendly versions will continue to
be developed. Trial testing of digital radio in Canada will be one of those developments.

WHAT ARE THE EMERGING AREAS FOR RADIO?

Radio will be part of the next wave of the information era. This wave of wired to wireless will see
the radio evolve to a supercharged tuner with some new and improved digital options.

1) On Demand - New digital technologies will provide more value to the listener. Consumers will
be able to have new format "seek" controls to take the work out of fiddling with the dial.

Commercials could even be on demand and interactive with listeners. Digital couponing will be a
new marketing tool that radio adverisers will use.

2) RadioMail - Radio sets will have special players that will give listeners their email or voicemail.
Just think the radio will be the first PDA (Personal Digital Assistant) that consumers can afford.
Listen to your tunes. Get your pages, Mail and voice mail . You can also send a radio fax.

3) GPS - The new radio set will also act as a low orbit satellite receiver that will be able to display
subscription information on its display. This may include location and mapping tools, vehicle
traffic reports, and a menagerie of information services.

4) Voice commands - You'll be able to tell your radio what you want. New radio sets will be very
user friendly at point of listening. Commuters will especially appreciate the hands-free option on
their radio with preselects and defaults for your favourite channels and interactivity with other
functions of your set including volume, balance and equalization.

6) Radio databasing - Imagine having your radio conduct a search for your favourite song or story of interest, call it up and and play it back over your set for you. Off site storage of music
and information hyper linked to your radio will make listening to radio more interesting than
mouse surfing on the Web.

7) Remote purchasing - Your new radio set will have a built in secured identification, addressing
debit and credit functions so that you can tell your radio to purchase the item advertised on the
radio. Your purchase will be at home before you are.

I believe that radio has an exciting future in the emerging world of wireless hypermedia. Some of
the ideas I have presented may be part of everyday life in the next few years. You may have a
few ideas that you may wish to add to this. Let me know, send me your ideas.....

## 366. Summary:RDS in Australia

Newsgroup: rec.radio.broadcasting
Date: 1995-06-20 00:00:00 UTC
From: Andrew Goodman-Jones <goodie@sydney.DIALix.oz.au>
Message-ID: <3s62ni$gbs@vixen.cso.uiuc.edu>
Source record: 31220

Here are the replies I have received RE:Is anyone sending RDS in Australia?

In mid August, the ABC is holding a
seminar in Syndey looking at RDS, Digital Sound Broadcasting (DSB) and
other new technologies ... perhaps something big is on the horizon.
T.Carter Ross
Radio World newspaper
tcr25@ix.netcom.com

Basically don't bother yet. The only station that is broadcasting an RDS
signal is Triple J. And the only thing they are sending out are the words
"TRIPLE J".
onicstek@magna.com.au
James Robinson

The Australian Radio Network will be commencing RDS test later this year on
Sydney MIX 106.6.
If these tests are successful and enough interest is found, we will then
exten
this service to our
Melbourne and Canberra FM stations.
At this stage we propose to follow the US RDS system (normally switchable in
receivers}
since it offer more format selection.

I will post a notice when the transmissions start.

Alan Liddelow
Network Chief Engineer
Australian Radio Network

## 367. Re: No more legal IDs?

>be in English. After all, ethnic stations use their own language, and
>stations on other bands use morse code.

Interesting idea... Wanna petition for a rule change?

73.1201(a) requires ID announcements at the beginning and end of
periods of operation, and as close to the top of the our as feasible. It
says TV stations may make the ID visually or aurally while not specifying
radio stations must do it aurally (RBDS ok?). I also do not find (in a
quick search) that the ID must be in English.
I believe, however, that the intent of the rule is to have the ID
readily understandable by an English speaking FCC inspector, without
using any special equipment (RBDS decoders, etc.). It is interesting to
note that part 74 stations may use a Morse ID, and that is specifically
stated in the rules. Further, amateur stations may use an AX.25 ID, and
that is also specifically stated in the rules.
I'm not convinced that the station ID is such a burden that the
current practice cannot remain. It does have some public interest
benefit in that without it, many stations would never acknowledge the
existence of the community to which they are licensed.

From: TReynolds@megaweb.com
Message-ID: <3s62nj$gbv@vixen.cso.uiuc.edu>
Source record: 31222

A new radio station began broadcasting in the Providence Market Wednesday, June 14th.

The station is known as the Edge, and will present a new rock alternative format. The station is
consulted by Jacobs Media, which consults 15 alternative stations nationwide.

99.7 FM is the last remaining FM frequency in Rhode Island. The EDGE illuminates all of Rhode
Island, nearby Mass, and CT with a 60dBu strength signal operating with the equivalent of 6000
watts at 800 feet above mean sea level.

Edge Program Director Brent Petersen says "I want Pearl Jam to play for my birthday party next
year, and I thought this was the best way to do it."

For more information call 401-823-3343, or email Treynolds@megaweb.com

Detroit Red Wings games are being broadcast on WJR 760-AM. Its a strong signal and is said to be heard in some 30+ states. You should be able to hear it from Columbus. This is the last year for retiring hall-of-fame announcer Bruce Martyn also, who's done Red Wing play-by-play for 30 years.

Tim

In a previous article, Ron@i-2000.com (Ron Yurman) says:
>A friend of mine is heading out to Columbus, OH from the New York City
>area and was wondering if any radio networks were carrying the
>Stanley Cup finals. Any ideas?

The NHL has its own radio network, NHL Radio, which is carrying
all Cup games.

Here in Phoenix, 1360 KGME (Glendale/Phoenix) is broadcasting all
Cup games live from the NHL Radio feed. Hopefully a station in
Columbus is doing the same....

I've finally got around to doing this. I've set up a Web page that lists info about radio and TV stations in and around Texas. There are about 1170 stations in there.

The info is broken down by markets: Abilene, Amarillo, Austin, Beaumont/ Port Arthur/Orange, Bryan/College Station, Corpus Christi, Dallas/Fort Worth, Del Rio/Cd Acuna, Eagle Pass/Piedras Negras, El Paso/Cd Juarez, Houston, Killeen/Temple, Laredo/Nuevo Laredo, Lubbock, Lufkin/Nacogdoches, Midland/ Odessa, Paris, Rio Grande Valley (Brownsville/Harlingen/McAllen/Matamoros), San Angelo, San Antonio, Sherman/Denison, Texarkana, Tyler/Longview, Victoria, Waco, and Wichita Falls. Also, it includes partial listings for Ardmore OK, Carlsbad NM, Clovis NM, Lake Charles LA, Lawton OK, Shreveport LA/Bossier City LA as stations in those markets border Texas.

As well as the market listings, the entire list is available sorted by frequency and by city of license. The city of license includes extra info like co-owned stations and LMA info that I know of.

In addition, there are links to radio and TV stations that have their own WWW pages - about 45 links right now.

Have and look and let me know of any errors or things to add:

Last fall when I visited Chicago a couple times there was a psycahdelic/progressive show on Mondays thru Thursdays from 10pm til midnight. I'm pretty sure it was on Arlington Heights' 92.7, but it's been awhile. I remember looking forward to hearing it every night, and sorely miss it out here in Southern California.

Perhaps someone from the Chicago area can provide more details.

When I worked at KFAC in Los Angeles, we decided to replace our RCA BTF-3B auxiliary FM transmitter with something a little newer.

We made a deal for a used 5 Kw RCA rig, and had it delivered to the AM transmitter site. I spent about a week cleaning it out, re-surfacing the contacts in the final cavity, replacing the high voltage wiring, etc.

Finally it was time for the smoke test. I jury-rigged it to the three phase power panel and turned on the filaments. Once it was warmed up I hit the Plate On switch.

The high voltage contactor pulled in and the building went dark. I listened as the blower on the AM transmitter wound down to a halt. I stumbled over to the power panel and tried resetting the breakers. Nothing.

I stuck my head out the back door and heard people in the surrounding apartment buildings calling out that their power had just gone out.

Then the phone rang - the studio operator wanted me to know that FM transmitter on Mt. Wilson was off the air, and the studio power had also glitched. About this time it began to dawn on me that the outage -wasn't- my fault!

BTW - that old BTF-3B was one bulletproof transmitter. At one point the de-icers failed on the Jampro antenna, and all 6 elements became solid globes of ice. The main transmitter refused to operate into that load. The 3B stayed on the air until the ice melted a week later, delivering 2.5 Kw forward power while seeing 2 Kw reflected back. It didn't care.

It was a hot summer day 20 years ago, and that training on the
emergency generator came in handy.
The generator, Korean War surplus, was about the size of a locomotive
engine; had been lowered into a basement and the engineering shack built
over it. You had to wear deadening headphones to work on it for long, as
the CE learned to his infinite pain. So when the summer storm blew the
electricity away, it was rather an act of bravery to light a match, head
for that basement, and haul away on the levers that started the big old
motor howling.
Nobody knew till later that a small plug in the generator's radiator
(it WAS a dinosaur!) popped out right after it started, the coolant
drained out onto the floor, and the engine seized up. But upstairs in the
studio, this time the lights dimmed slowly instead of blinking out, and
the record on the turntable SLOWLY spun slower and slower...
It was past bravery to venture into that basement again.

Here's what is happening from the 15th market:
San Diego, La Mesa, San Ysidro, and Tijuana, Mexico.

Minions unite! Listeners to the "Ask Mr. KFI Show" will be pleased that Mr. KFI is now on every weeknight from 9 to midnight! Stephanie Miller is off to do her new television show [distro: Buena Vista]; and phyco Marlyn Kagen has moved to the 7 - 9 p.m. slot. This is the first shakeup in programming in KFI since Chief Gates left in early 1994. Gates, who had a show on from 7 - 9 p.m., is a sometime replacement for morning host Bill Handle.

The eclectic show of Mr. KFI is a funny, fast moving show that entertains "and changes lives in magical ways." Mr. KFI has no screeners; somthing that is a rarity. [I only know of Art Bell, the nationally syndi show, not to have this policy too in this area.] Check the alt.fan.mr-kfi newsgroup!

Art Bell turned 50! The host's birthday was celebrated last Friday night/Saturday morning. During the week, I heard him say that he has "over 170 stations." Friday nights guest is Richard Hoagland. Bell is heard in San Diego on KOGO [AM 600]. http://www.artbell.com/art/

Coming moves: my much published announcement of KKOS' move to 95.7 has some interesting news: XHRM [92.5, Tijuana] "The Flash" program director is heading north to the AAA format station. Sherman Cohan duties at KKOS aren't known. This, on the public information release of the intended broadcasting from Mt. Soledad and 7kw. The site is host to a majority of FM and TV stations in the San Diego area. No word if the city of license will change; or if the studios will relocate [I hope not].

With Cohan's departure, Brian Jones is now the PD. Jones was at XETRA FM [91X].

Latest trends [published: SD Tribune, Escondido Times Advocate]

KYXY reigns in at number one! The AC station is .6 over country KSON, the former number one station in San Diego [6.5]. Followed by XHTZ [Z-90] at 4.6, and KKLQ A/F at 4.3. Tied at 3.7: XETRA-FM [91X] [alternative], KFMB-AM [760, Full Service], and fine arts KFSD [94.1]

Other notes: LA stations in the top include: KNX [1070] news holding at 2.2, KFI-AM [640] 2.0, and KLOS [95.5].

KWVE [107.9] San Clemente, a relgious broadcaster shows at .6, tied with KPRZ-AM [1210] San Marcos.

Duops:

Combined listeners for group/duop owners:
Par Broadcasting: KOGO/KIOZ/KKLQ A/F 10.4
Midwest City: KFMB/KFMB-FM 6.3
KyXy/KMKX: 9.6
Nobel: XETRA/XETRA-FM: 5.7
Tri-Cities: KKOS/KCEO: 1.6
KGB/KPOP: 5.9

Here's one that goes back to about 1968.

I was working at the late, unlamented WGLM (FM) in Richmond, Indiana. There may be a few people around who know of that station, which was legendary in its time for being run on a shoestring and a prayer, and held together with bubble gum and baling wire. Remember, this was before FM was big...and this station was always on the brink of financial ruin.

I'm not an engineer, so give me a break on the technical terms.

Anyway, I came in one Sunday morning to sign on (we operated only 18 hours a day). The transmitter remote control wouldn't work. It was one of those old mechanical relay devices that used a telephone dial to bring up meter readings over a dedicated telco circuit. It wasn't unusual for the morning guy to have to drive out to the transmitter shack about five miles out of town, fire the thing up manually, and then go back to the studios to broadcast. (totally illegal, but you did what you had to do).

I was badly hung over and in a really foul mood, and as I started to walk out the door to go to the transmitter, the phone rang. It was the station owner, telling me there was trouble at the transmitter, and I should come down and help.

When I arrived at the transmitter site, the owner and our French-Canadian engineer were in the shack, with the transmitter almost totally dismantled. I was still in my hung-over fog when Jacques the engineer looked up and said, "Zee transmeeter ees fool of baird sheet!"

My reaction was to double over in laughter, which did not please either Jacques or the boss. What had happened? It seems some birds had decided that the roof of the transmitter shack was a nice place to roost, and enjoy the heat radiating from below. The opening for the antenna coax was none too tight, so the droppings had been accumulating in the high voltage cage of the old 5kw Gates, to the point where there was a gigantic arc, and just about everything in the rig went kablooie. This had happened late the night before, while I was out getting plastered.

I seem to remember we managed to kludge the exciter back together to get the thing on the air with about 50 watts ERP (out of 32kw licensed) by the middle of the afternoon. The owner had to persuade Gates to front him a whole bunch of parts even though he owed them money, and somehow he did it, and we got the station back up to full power in three or four days.

My memories of WGLM are very fond. Working there paid most of my way through college from sophomore year on, even though we usually had to cross the state line into Ohio to cash our paychecks to give the boss a few extra days of float to find the money. I rose from part-time jock to PD and learned all

the basics of broadcasting. But we did have our trials and tribulations. I believe the station is now WQLK, and co-owned with WHON(AM), where I got my first radio job...but that's another story.

BTW, on the odd chance that someone reading this group may know about these stations, my air name at the time was Jay Howell.

Source record: 31232

WBAI-M, late 1950s. Ancient transmitter, _circa_ 40s. I was PD; the GM was a superb recording engineer, it so happened, but not a transmitter engineer. The transmitter had somehow gotten off-center (not quite the right term but I'm sure you know what I mean). Our Chief engineer was somewhere on a boat, unreachable. So, the GM decided that, since he knew the theory, he'd retune. Seemed simple until the phone rang. I took the call. Said a deadly calm voice: "Is this WBAI-FM?" "Yes." "WBAI_M, 99.5 on the FM dial?" "Yes." "This is LaGuardia control tower, godamnit it, you're overiding our communications." I jumped for the master switch (about the only thing I knew how to do with the xmitter) and took us off air. When things calmed down, and I think I remember this correctly in technical terms, it turned out that in his retuning, we were putting out a strong second order harmonic (50Kw ERP) on the control tower's frequency.

Well, it seems the more things change, the more they stay the same. When I was growing up (a LONG time ago), I remember WTOP-TV in Washington doing the identical thing.

The call sign was so small it was barely visable on the screen, but there was a huge "9" that spread from top to bottom on the right side of the screen. The voiceover was simply "Channel 9".

This was 40 years ago. Fox is a Johnny-come-lately.

Grant

>that].

Washington's WRC-TV hasn't done this yet, but I think its
only a matter of time. I hear from my own sources that
the O&Os have until the end of summer to implement the
change.

With the success Fox has had with this sort of "branding"
(both WTTG in Washington ("Fox Five") and WBFF Baltimore
("Fox 45") have made this change), and now major tv stations
affiliated with United Paramount Network ("UPN 20"/WDCA-TV)
also making the change, it wasn't surprising to me that
NBC would give this a shot as well.

However, I would suggest that stations in some of the older
markets may look carefully before jumping on this bandwagon.
For example, WBAL-TV in Baltimore, recently switched from
CBS to NBC, may not choose to as readily drop these legacy
calls, because of the strong identity with the community,
and their very successful AM radio station.

Which leads me to my point for radio folk: I think you
really need to look carefully at what your call letters
mean to your listeners. If your station is known more
by a "name", more power to you. (Hmmm...would stations
affiliated with, say, Tom Joyner's morning show begin to
call themselves "Joyner 96.3", if we were to follow
the FOX/UPN/NBC model of television? <g> Or how about
a "Stern 106.7"?????? <big smile> <SFX>: Very loud thunder clap; deep voice
announces "You're listening to...THE STERN.")

But if those calls have meaning in your community...why kill good calls?

Carry on, my wayward son...

>Can anybody give me some usefull advice on Digital Audio Systems ?
>We are about to purchase an ENCO DAD system (Hard Disk system with
>touch-screen).

WMC-AM uses a 7-station DAD system for News/Talk. All audio comes from the mics or the hard drive. From the standpoint of someone who's punched buttons on it for several months now, its an excellent on-air system.

Just two caveats. First, do _exactly_ what ENCO says on hardware, specifically when ordering network cards. It can be very picky; we put a wrong one in for about 2 weeks, and we were picking corrupted spots out of our hard-drive for months. Also, while the editing app is fine -- even excellent -- for on-air work, don't think you're buying a total on-air/production solution. We use an Orban DSE-7000 for production, but we have not yet hardwired it into the DAD network (once that is done, we'll be able to download spots saved as library cuts directly into the DSE).

I hope you enjoy the system. Its incredible versatile.

I agree with you, Peter, and have expressed views similar to yours in a past post in which I suggested that consolidation of the industry was not in the public interest nor in the interest of those who work in radio. In response I was accused of championing "big government" against the free market Before Whom Thou Shalt Have No Other God.

I'm still very concerned about all this concentration of power in the industry but I suspect that in the long run local radio will survive (even if many of us in the business do not).

The reason I feel that way is that I've seen that computer technology is not the panacea that it looks like. I've seen people spend tremendous amounts of man-hours and dollars in pursuit of the ever-elusive "paperless office" only to find that they are always two steps short. The more American business invests in technology the more dependent it becomes on that technology, and the more it must spend to protect itself against failures, whether they be hackers penetrating sensitive files, power surges crashing critical applications, or operator errors. I'm not sure any more that a centrally managed empire of hundreds of local stations can compete successfully against a shrewd independent local operator who employs guerrilla marketing tactics.

And we must not forget that theres's never been a lot of money in radio when compared with any other medium. The last great "boom" in radio was fueled by speculation and ended with a resounding crash in the late eighties that left many banks and other investors with a sour taste in their mouths. Expect more of the same after the corporate euphoria with today's deregulation dies down.

When the FCC limits evaporate we will come to discover what bankers in the eighties learned to their misfortune: the real value of a radio station is in its relationships with people-- advertisers and listeners. Relationships don't show on a balance sheet but they make the difference between 50,000-watt WNRB, to whom almost nobody listens, and 50,000-watt WBZ which rules the market. In the last analysis the local advertisers who make up the bulk of a radio station's revenue will always be more accessible to a local broadcaster than to someone who tries to do business by fax or e-mail from New York; likewise, there is a demonstrated preference among listeners for local signals-- the same WBZ which is number one in Boston puts a listenable daytime signal into Albany, 150 miles to the west, yet it's barely a blip in the Albany market.

There are some questions I'd like to pose: does anynone think that WBMX, or WZLX, or WMJX, or any other station in town that uses Selector or Musicscan to pick its music sounds qualitatively better than its manually programmed predecessor of the seventies? And do any of you who've heard

the research-driven "scientific" programming of today's radio feel it compares positively with the old-fashioned gut-instinct "artistic" radio of the past? While pondering the answers to that one, ask yourself which is the more likely source of creativity: a large, centrally-controlled, bureaucratic organization or two guys operating a business out of their basement?

Sounds good to me! 73.961(c) requires a weekly test a minimum of
once a week at random days and times between the hours of 8:30 a.m. local
time and local sunset.
Some people have interpreted the "once a week" minimum to having
no more than seven days between tests. Based on the procedures the FCC
uses in inspections, I'd suggest running a test at least once each
"calendar week" (Sunday through Saturday). An inspector will generally
take a week's worth of logs and look for the time and date of the test
transmission and reception in that week. I suggest people include a
review of EBS test transmission and reception logging during the required
weekly log review by the chief operator.

note that WCCO originated it...at 2:30 PM CDT on a Sunday.
Now...is this how we're supposed to be doing it?<

If your question here is "is it legal to do an EBS test on a Sunday?"
The answer is yes...

EBS tests can occur and are to be conducted on any given day of the week,
provided it is ONCE / week, and it must be between 8:30 AM to Sunset, local
time. Sadly I have heard KRLD-AM in Dallas conduct tests before 8:30 AM.
And I have heard them do that at least twice.... (and I mean recently...
as in the time frame between April and June of this year)

Is the FCC reading this? <grin>

Of course the rules may change after July 1st....

Also, I re-checked the Station IDentification rule, 73.1201. It
says nothing about doing legal station ID's after your x-mitter
is popped off air due to t-storms. It only says that a station ID
must be done once per hour, closest to the top of the hour mark, and
also when a station is beginning and ending their broadcast day.

Being popped off the air due to a t-storm, is not likely to be considered
the beginning or ending of a broadcast day. (Unless of course you get
popped off at the time at which the station regularly signs off anyway)

Just some followup to Mark's post: GM Harry Williams says the format grew out of some Research Group findings about a hole for rock from the late 60s through the early 80s, concentrating on 70s. Alex DeMers is consulting. "Earth 105" has hired longtime
Portland manager Paul Clithero as GSM. General Manager Harry Williams of Heritage Media's KKSN-AM/FM is now also overseeing "Earth 105." Haven't seen anything yet about new calls for the one-time KXYQ. (It's the station once owned by members of VanHalen
.) Tom Taylor/Inside Radio

## 394. Seeking "Publisher" for RealAudio site

Newsgroup: rec.radio.broadcasting
Date: 1995-06-21 00:00:00 UTC
From: Rob Glaser <robg@prognet.com>
Message-ID: <3s81fj$klu@vixen.cso.uiuc.edu>
Source record: 31244

Many of you may be familiar with Progressive Networks' RealAudio system, which brings audio on demand to the Internet. We are now seeking someone to lead the business of running the RealAudio.com site, which in just two months has become a very popular site on the net, receiving approximately 200,000 "hits"/day.

Specific responsibilities include: line management of a significant P/L; creating new marketing and advertising applications using RealAudio; recruiting and signing up site advertisers/sponsors; and working with the RealAudio.com editorial team to ensure the on-going vitality and growth of our site.

For lack of a better term we're calling this position "publisher," but it seems just as likely to us that the right person has a broadcast background. The ideal candidate will have

* At least 3-5 years relevant experience in running a substantial media business such as a print publication or a radio or television station.
* At least 2 years direct line experience selling advertising/sponsorships.
* At least 2 years experience working in a business closely connected to the Internet, and a fundamental understanding of the dynamics of the net.

For more information you can browse the full job listing at http://www.realaudio.com/prognet/jobs/publish.html

If interested, please fax or email your resume to:

Progressive Networks
616 First Avenue, Suite 701
Seattle, WA 98104

FAX: 206-223-8221

e-mail: jobs@prognet.com

Please specify job code: PUB

Thanks,

Rob

We'd love to talk with you and other folks in the Radio business
regarding ways that the RealAudio system can meet these needs. Several
major national networks and several individual stations are already
using or developing plans to use RealAudio in ways that are similar
to what you envision.

Best person at Progressive Networks to contact is James Wells, PN's
VP of Sales, at 206-447-0567, x241 or jamesw@prognet.com. If you'd
like more information first, you can send e-mail to info@prognet.com,
or point your Web browser to http://www.realaudio.com.

Best,

Rob

As I recall, WADO's plans to go 50kw on 1280 involved moving WGBB-1290 in
Babylon further out on Long Island so as not to interfere. Also, I
believe WADO's 50kw application was for daytime only, and that their
existing nighttime pattern (which our sister station, WHTK-1280, protects)
would remain the same at 5kw. If this is not the case, tell me, inquiring
minds want to know! <g>

> Also the NJ Meadowlands Authority has juristiction over everything from

To make matters worse, doesn't WSKQ-620 Newark have a CP to change their
city of license to Rutherford, and move their five towers next to the WOR
array?
Has there been any progress? Is this ever going to actually happen?

> Or how about WINS, which is finally getting to start construction of new
> towers so they get their old pattern back. It was the construciton of

I believe WINS is about to buy the station on 1010 khz in Little Rock, Arkansas (KLRA) and take it dark to improve their signal. And I think WINS was also interested in doing the same with WRNJ-1000 Hackettstown NJ, which had applied to move to the old frequency of dark WSRR in Washington NJ, but the FCC nixed WRNJ's move to 1580, which would have added nighttime service at something like 440 watts.

## 399. Harrisburg, PA News

Newsgroup: rec.radio.broadcasting
Date: 1995-06-22 00:00:00 UTC
From: "M. Hale" <mh5260@clark.net>
Message-ID: <3sakk8$o03@vixen.cso.uiuc.edu>
Source record: 31150

Was just in Harrisburg, PA and a friend of mine told me that WYMJ (99.3) (formally WIMX) has decided that it will not continue to carry Don and Mike and Imus in the morning on the FM station. It has decided that the talk programming will be on its AM station WCMB (1460) only.

I really don't understand this since the FM ratings have rose significantly since the addition of Don and Mike and the new urban based format. Also, the WCMD signal is really pretty bad once you get out of Harrisburg proper. It is 5,000 watts, but it doesn't have any umpth. I was glad the have Don and Mike on FM (and so were others) since the FM gets down into York, Carlisle, Chambersburg, Lancaster and into the north well. I suspect the station wants to concentrate on the music and the FM and the talk on the AM all over agin. But guys, wait until its Standard Time and you go on night power at 4:30 PM. Don and Mike are on until 7 PM and you don't have the WHP flamethrower signal. I don't understand this move.

Comments anyone?

-Mike

## 400. New England Radio Watcher: All Over The Place

Newsgroup: rec.radio.broadcasting
Date: 1995-06-22 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3sakk9$o08@vixen.cso.uiuc.edu>
Source record: 31151

Another one of those miscellaneous weeks, I guess...

*AM 550 in Pawtucket (Providence) RI remains off the air. I last noticed them on the air around May 30, so that means they're coming up on 3 weeks dark. Back Bay Broadcasters (WBNW 590 in Boston, WARA 1320/WWKX 106.3 in the Prov. market) is buying 550 and reportedly plans to change calls from WICE to WPNW, simulcasting WBNW's Bloomberg news/biz talk format.

*WMBR (88.1) in Cambridge was briefly off the air early this week, but returned Tuesday afternoon June 20 from its new directional antenna on the MIT campus. The power increase from 360 to 720 watts will reportedly happen very soon.

*Last weekend brought the opportunity to drive out to the Worcester area and do some tower-hunting. Seems Broadcasting Yearbook has been carrying an error on its pages for some time; its listing for WWTM-1440 shows the same tower coordinates as WTAG-580. The FCC database says otherwise, and the FCC is (surprise!) right. The 1440 site is within Worcester city limits, on the West Side of town a couple miles north of Rt. 9. Two towers in what has become a very densely residential neighborhood, though it was surely farmland when the towers were built. I'm guessing they date back to then-WAAB's 1940s move from Boston to Worcester (to escape the FCC's new one-to-a-market rule).

Further out route 9, saw the 3 tower array of WCRN-830, which just took to the airwaves last year. It's just off Route 9 in Leicester. Nicely built, and putting out a decent signal. Still further to the west, WBPR-91.9, the satellite station of UMass/Boston's WUMB-91.9, holds forth in less-than-glorious mono from a telephone pole just south of Rt.9 across the Spencer town line, behind a golf course. Photos will appear in a week or two on the Boston Radio Archives page...this is one not to be missed! Never did find WVNE-760, though the coords would put it just north of rt. 9 in either Spencer or East Brookfield. Also had a nice visit to the WCUW-91.3 studios in Worcester...very friendly people. Just down Main Street is the alleged studio site of WCRN at 1049 Main Street -- no sign and it looked pretty vacant.

*Returning to RI for a moment -- WUAE 99.7 Wakefield has applied for the WDGE calls, to fit their tagline "The Edge." I have a WUAE legal on tape, so they're welcome to change whenever

they'd like :-)

*Just barely off-topic: WSBK-TV in Boston is ending its 10pm newscast effective August 6. The newscast debuted in 1993, and was produced at WBZ-TV. WSBK is now a UPN affiliate, and owner Viacom thought the presence of a WBZ-branded newscast was diluting the station's new "UPN 38" identity. Rumor has New England Cable News switching from producing a 10pm cast for WFXT-Fox 25...to doing one for WSBK, bearing the "UPN 38 News" identity.

*And finally, a death to report: Many of you have heard or heard of John Garabedian, the host of the syndicated "Open House Party" and one-time owner of WGTR Marlboro MA. His father, John N. Garabedian, died June 8 at age 94. John N. worked for his son at WGTR as the station's treasurer, after retiring as vice president of John H. Pray and Sons.

: A few folks here have asked for the horror stories of broadcast gear break-
: downs. Gads, what sadists you are! Broadcast folks would rather forget 'em!

Back around the early 1970s, I got a Field Modification Kit from Harris for our FM-10B transmitter. It consisted of an in-line fuseholder and a one amp fuse. The installation instructions were something like this:

PROBLEM: Main AC line breaker trips if front panel PLATE ON lamp is changed while transmitter is on the air.

SOLUTION: Install 1 amp fuse in line between the transformer side of the plate contactor and the light socket.

The pilot lamp was a neon bulb, connected across two phases on the transformer side of the plate contactor. There was a dropping resistor between the center pin and it's associated phase, but the outer shell was connected directly to the other phase.

The whole assembly was mounted on an insulated block just behind the front panel. Apparently someone found out it was possible to make the base of the lamp bridge between the socket and the grounded front chassis panel while changing the bulb.

It was the first day of the spring book, and the engineering department at Cap Cities' KPOL-AM 1540 had been working overtime with the consulting engineers to install the new 50K transmitter and phaser.

We'd been at 10K for several weeks, causing us to lose much of our coverage area, including some of the Hollywood Freeway, thanks to KDAY at 1580.

At 5:00 AM, we were all waiting to hear that new powerful 50K signal that would give us a shot at some big numbers in the book.

By 5:30, we were still waiting. Finally at 6:00, we came up, and I started the newscast. A few words later, we were off the air. A call to the transmitter. A panicked engineer who yelled, we'll call you back.

At the transmitter, on the edge of a reservoir in El Sereno, the phaser poured forth smoke and flames. Engineers ran for fire extinguishers, and they started the rating period without us.

6:30 came and went, then 7:00. Every half hour, I'd trot down the hall to the news booth and stand there for 5 minutes, hoping we'd come alive.

We spent the whole morning off the air, came back that afternoon, and spent the whole book back at 10K while the consulting engineers reverse-engineered their faux pas.

Neil Ross, now oft heard doing narration on the Discovery Channel was doing morning drive and quipped about that morning and our exercise in futility.

"Welcome to the KPOL Wax Museum, featuring announcers in life-like poses."

Listening to the radio today, Fairbanks owned WCLB 105.7 has changed thier calls to WKLB. They are still calling themselfs "The Country Club". I called and spoke to someone there and they said it was done to stop the confusion with some other stations. I mentioned WCRB, the classical in town, and was told there were others also... Will this add to the rumors that a format change is comming??? (I'm sure)

How right you are Bill. That Xmiter is off the air right now so
we can
be heard that far away. Also how many talk show hosts can say
they got
a call from that far away? I think the guy above is jealous.

There's also a fellow named Ricco who does an oldies show on the weekends (I understand he's a local high school teacher during the week). He's usually last thing before sign-off, which is usually 5pm or 6pm, and not as late as sundown!

I remember the 1060 address well, it's 4601 Hills and Dales Road, NW. Visited there in 1979 when it was WQIO (which yielded most of the tape I have of them) and was back there about a year ago, but it was on the weekend and I didn't get in. I wouldn't doubt the same equipment is still in use!

>>WQIO, a/k/a "Q-10," was a helluva Top 40 station in its heyday (especially
>>for a daytimer in a market that size) and was programmed by Ron Foster,
>>who came there from WFMJ-AM in Youngstown, I believe.

> ABC/SMN's Pure Gold 24 hour format, would it? Incidentally, another former
> WFMJ PD was my first PD in this business - Steve Fine, who was last spotted > at WRRO/Warren as PD there.

No, I'm told the Ron Foster on ABC/SMN isn't the same one, and he sounds a bit different, anyway. I did have the pleasure of running the Pure Gold format on an AM station I programmed (along with its FM) in 1990-1991, WEEX-1230, in the Allentown PA market, where I thought it sounded quite good and was a lot of fun.

Someone tells me the WQIO Ron Foster (PD/afternoons) is at a Mike McVay consulted radio station somewhere in Florida, but so far I haven't been able to track him down. I wonder if Steve Fine might know where he is?

Some of the other personalities on WQIO-1060 in their Top 40 heyday were:
Beau Weaver (mornings)
Greg McArthur (middays)
Todd Brush (evenings...in summer, anyway <g>)
Steve Brodie (mornings, later)
Jonathan Holly (also an alumnus of WINW)
Mike O'Brien (later Cat Simon in Houston)
Christie Maxx (now at WQAL/Cleveland)
I think a couple of these survived the format change to Country, which happened in late 1981 or early 1982, after an FM station (WOOS-106.9) had gone Top 40 and drained most of their audience. I heard the WQIO country format and it was rather depressing after what had come before!

If you know where any of these people are, or would happen to have tapes of any of them on WQIO, please drop me a line via E-mail.

Regards,

Clarke

: book he and his yes man sidekick lost half the station's numbers.
: What's so right about that? The only thing on that station that's any
: good is Tom Leykis.

: Jay

A little background, too, for those not living in Chicago:

Ed and Ty used to do Afternoon Drive on WLS AM/FM. When management broke up the simulcast arrangement and spun the FM off into a "Lifestyles-Oriented Talk" station, Ed and Ty were to remain on the AM only, with a different show (Jay Marvin's? Were you on at 2 at that time?) taking the same spot on the FM. Ed Vrdolyak quit the station in a huff, publicly bitching and moaning to anyone who would listen (especially the Trib and Sun-Times :) )that his show BELONGED on FM, that putting him on AM would shut him out of high-rise buildings down-town, blah blah blah. So what happens next? Ed and Ty wind up on--surprise--an AM station doing Morning Drive...and an AM station with a dismal signal at that, despite its 50kW of power....

Same station also carries Liddy, Don and Mike, and Tom Leykis. Leykis is, IMO, the one major attraction that station has.

[Moderator's Note: WJJD's daytime 50kw is a 2 tower directional that concentrates about 85kw toward Chicago with the null pointed sort-of at Lake Geneva. Directional not for protection, but for signal concentration. The day signal is really quite good. I have heard them well past Bloomington Il by days... Nights, at 5kw tight directional is not so good though. Bill]

## 409. Re: What is a "Creative Director"?

Newsgroup: rec.radio.broadcasting

>I was given the title of Creative Director when I was hired at my
>present gig over a year ago. The more time goes by, the more duties
>I keep getting. Is this fair? Tell me what your experiences are
>with this "job title"...
I went from Production Director to Creative Director to Creative Services director as I "graduated" from one station to another in the Philadelphia market.
Basically, the Creative Director did what a Production Director did (dub spots, voice and produce spots, promos and so forth) with one important distinction...the Creative also wrote commercial and promo copy. Writing copy, as so many cheap GM's have discovered to their dismay, is not a job to be left to the sales or promotions people or, most of all, to the program director,

>Where are you now?
Now I'm a partner in a small, successful Philadelphia ad agency, where I have my own studio. Much of my work comes from digruntled advertisers who formerly bought direct from radio stations but couldn't get effective spots made at those stations. I also get plenty of referrals from salespeople who can't make their clients happy in-house.
>Along with being "Creative", did you have any other job titles?
Not a title, but I worked with the various morning shows in writing and producing bits.
>If you're willing, what was your salary? Bonuses?
Salary was in the mid-40s (I'm feeling much better now, thank you), but the real money came from my spots that ran outside the station. Prices started in the $400 range, with $150 for each additional voice. My last year at a radio station saw my freelance income nearly equal my salary.
Keep in mind that salespeople would rather be selling than writing spots. If they can stick their head in your studio, give you bullet points, and come back a few hours later to hear you say "I played it for the client--they loved it", you've made two important friends...the client, who'll follow you from station to station, and the salesperson, who will stay in touch and refer accounts.

## 411. Re: DUOPOLIES, very, very DANGEROUS !

Newsgroup: rec.radio.broadcasting
Date: 1995-06-22 00:00:00 UTC
From: umar@tiac.net
Message-ID: <3sakkp$o12@vixen.cso.uiuc.edu>
Source record: 31162

I agree with you, Peter, and have expressed views similar to yours in a past post in which I suggested that consolidation of the industry was not in the public interest nor in the interest of those who work in radio. In response I was accused of championing "big government" against the free market Before Whom Thou Shalt Have No Other God.

I'm still very concerned about all this concentration of power in the industry but I suspect that in the long run local radio will survive (even if many of us in the business do not).

The reason I feel that way is that I've seen that computer technology is not the panacea that it looks like. I've seen people spend tremendous amounts of man-hours and dollars in pursuit of the ever-elusive "paperless office" only to find that they are always two steps short. The more American business invests in technology the more dependent it becomes on that technology, and the more it must spend to protect itself against failures, whether they be hackers penetrating sensitive files, power surges crashing critical applications, or operator errors. I'm not sure any more that a centrally managed empire of hundreds of local stations can compete successfully against a shrewd independent local operator who employs guerrilla marketing tactics.

And we must not forget that theres's never been a lot of money in radio when compared with any other medium. The last great "boom" in radio was fueled by speculation and ended with a resounding crash in the late eighties that left many banks and other investors with a sour taste in their mouths. Expect more of the same after the corporate euphoria with today's deregulation dies down.

When the FCC limits evaporate we will come to discover what bankers in the eighties learned to their misfortune: the real value of a radio station is in its relationships with people-- advertisers and listeners. Relationships don't show on a balance sheet but they make the difference between 50,000-watt WNRB, to whom almost nobody listens, and 50,000-watt WBZ which rules the market. In the last analysis the local advertisers who make up the bulk of a radio station's revenue will always be more accessible to a local broadcaster than to someone who tries to do business by fax or e-mail from New York; likewise, there is a demonstrated preference among listeners for local signals-- the same WBZ which is number one in Boston puts a listenable daytime signal into Albany, 150 miles to the west, yet it's barely a blip in the Albany market.

There are some questions I'd like to pose: does anynone think that WBMX, or WZLX, or WMJX, or any other station in town that uses Selector or Musicscan to pick its music sounds qualitatively better than its manually programmed predecessor of the seventies? And do any of you who've heard

the research-driven "scientific" programming of today's radio feel it compares positively with the old-fashioned gut-instinct "artistic" radio of the past? While pondering the answers to that one, ask yourself which is the more likely source of creativity: a large, centrally-controlled, bureaucratic organization or two guys operating a business out of their basement?

> handle this? (Perhaps dial *ISDN :) How are YOU guys broadcasting
> sports via ISDN?

ISDN can be installed (and disconnected) just as a standard telephone line is. As you observe, the installation charges can kill you. The NHL used Switched 56 (a precursor to ISDN, but still a dialled-up digital service) and each team provides a line for the away team. Many NFL teams (where budgets permit) will order ISDN lines to be installed at the away game about a week before the game and removed the day after. This adds a few hundred bucks to the cost of each broadcast.

ISDN offers full broadcast fidelity, duplex-operation, and a host of cool features. Coordination a system for the entire sports league may be the most practical and economical way to get such as system up and running.

## 414. KLOO/KFAT sale

Newsgroup: rec.radio.broadcasting
Date: 1995-06-22 00:00:00 UTC
From: Rick Hansen <rch@hansenr.ads.orst.edu>
Message-ID: <3sakks$o16@vixen.cso.uiuc.edu>
Source record: 31165

According to the Corvallis OR Gazette-Times, KLOO-AM and KFAT-FM, Corvallis, have been sold. The buyer is identified as Lee Jamison who has been in radio since he graduated from Oregon State University (Corvallis) in 1969. Jamison was an offensive lineman for the OSU Beavers during a time when the team was called the "Giant Killers" for a string of upset wins over highly ranked teams.

The article says that Jamison, currently living in Broomfield CO has worked in radio stations in Portland OR, San Fransisco and Colorado, and was General Manager of Big Dog 92.5 FM in Denver, leaving when new owners changed the country format. Jamison will move to Corvallis in July; the sale should be final in August.

KLOO-AM is a talk/oldies station. KFAT-FM is a 100,000 watt country station.

The newspaper quotes Jamison as saying that he has no plans to change the programming at either station: "Corvallis has great potential. It's a growth market, and I love country music."

Current owner Don Smullin operates TRC Communications, Inc., which designs and sells broadcast equipment to European radio stations. His headquarters is in Italy. Smullin, from the article: "I couldn't do justice to the stations by operating them from 9,000 miles away. This is a good deal for Corvallis and a good deal for me."

ID>Maybe, maybe not. Mario Cuomo is an ideal in several ways: his show
ID>would cover the block just before Rush, giving his affiliates a chance to
ID>balance their schedule. Who else is on 9-12 noon Eastern of any
ID>consequence nationally? Also, the times I've heard Cuomo he was a good
ID>listen. Now, finding someone to sell it to affiliates might be more
ID>difficult. How many people are good at affiliate relations who aren't
ID>already tied up in some deal?

David,
Cuomo's show will be fed on the weekend, not weekdays 9-12. We feed
Dr. Joy Browne 9-12noon weekdays. Since she's on more than 200 stations,
I'd consider that of some consequence.

Trying to clear a political show that claims to be intellectual against
a high profile wacko (Liddy) is an exercise in futility. Counter
programming is the best approach.

SW Networks has lots of money to support the show and a committment
to it. If it disappears, it'll be because Cuomo has other things to do.
Remember Buchanan. Politicians generally don't like having a regular
time committment that requires them to sit in a studio.

Rich

>>in reference to the station. A check of KNBC, TV 4, Los
>>Angeles, confirms this. There is no on air reference to
>>the call letters of the station, just NBC Channel 4, with
>>the hourly required id in letters [and damn small ones at
>>that].

NBC O&O WNBC in New York has been doing this for quite some time ("Four New York"). I rarely see an ID at the top of the hour. However, it is interesting to note that on a recent trip to Ft. Lauderdale, NBC's Miami O&O very rarely mentions their dial position. Instead, they say "This is WTVJ, NBC in South Florida." I suppose they are gearing up for the channel and tower swap with the CBS O&O (WCIX Channel 6) in Miami.

## 422. Syndication Help Needed

Newsgroup: rec.radio.broadcasting
Date: 1995-06-22 00:00:00 UTC
From: Jon Sorenson <70264.3707@CompuServe.COM>

Source record: 31173

I have developed an innovative and highly entertaining concept for a 2-minute vignette and need some guidance on how to procede with syndication. Dare I try to self-syndicate? Has anyone does this and succeeded? I have extensive marketing background, primarily in a consumer products field, plus some limited exposure to radio production and syndication. I would appreciate your feedback.

[Moderator's Note: Anyone wanna create a decent FAQ on syndication? I get quite a few of these requests and the answers are fairly constant. I would appreciate any help creating a good, informative FAQ on this subject. Bill]

Assuming that the local station is operating within the FCC rules (do any of your neighbors have the problem?), you can go to Radio Shack and get an FM interference filter, or you can make a filter our of a short piece of RG-59 coax cable that will work quite well:

Cut off a piece about thirty inches long. Strip the insulation off one end only; connect the braid to one side of the line from your antenna where it enters the TV set, and connect the center conductor to the other side of the line.

When done correctly, your TV will have a short piece of coax to nowhere connected in parallel with the feed from the antenna.

Now cut off the last 1/2 inch of the dangling end of the short piece of coax while watching one of the affacted channels on TV. You probably won't see any effect, in which case cut off another 1/2 inch. After you've cut off several inches that way wou should see the interference start to diminish. When that happens, cut off a 1/4 inch section. Keep cutting until the interference goes away. You'll probably have somewhere between a foot and twenty inches of coax left at that point.

Is it a new station, or new facilities? Are you located close to
the transmitter?
FCC rule 73.318 says that if you are within the 562 mV/meter
contour of the station, stations are to provide technical information
that you can use in dealing with blanketing interference. If the station
has been there less than a year, they must solve the interference problem
for you. If, however, you moved into the area more than a year after the
station went on the air, they only must "provide information" to solve
the problem.
I have an upcoming article in Radio World on FM blanketing
interference. A station in New York spent four years trying to solve the
interference. They got it down from over 200 compalints to about 3, but
since not all the complaints were fully satisfied, the station had to go
back to using its old facilities.

Larry

In order to get the proper trap for filtering a radio station coming in on your TV, you need to find out what the radio station's frequency is. Once you know what the station's frequency is, you should be able tp get the proper trap needed.

I am going to "guess" that it's probably going to be in the range of 88.1 to 88.7 mHz on the FM dial, but there are other possibilities.

Also what kind of TV antenna are you using? Is it twin lead, co-ax, or just rabbit ears?

Rob Bass

The quickest, cheapest, and easiest way to notch out a single frequency
is to put a quarter wave stub on the coax. What is the frequency of the
station? Calculate its wavelength and divide by 4. Post the frequency
and I can calculate it if you like. Cut a piece of coax EXACTLY this
length, put a connector on one end and leave the other end OPEN. Do not
short the center to the shield. (This creates an Open at DC, but at the
stations frequency it appears as a Short.) Put a "T" connector on the TV,
attech the incoming cable to one side and the quarter wave stub to the
other.

I have used this many times with great success in homes located very near
FM tower sites.

> watts with the pattern it runs (mostly north into the lake and in a
> narrow southward band along I-390).

Well, not to belabor the point, but the WHTK-1280 signal (5,000 watts with four towers at night) just isn't as bad as some people make it out to be, especially compared to the nighttime signals of the other Rochester AM stations:

WBBF-950: 1,000 watts with four towers.
WCMF-990: 2,500 watts with six towers.
WXXI-1370: 5,000 watts with four towers.
WWWG-1460: 5,000 watts with three towers.

Of course, WHAM-1180 beats all comers with their 50,000-watt, non-directional signal, which I'm told covers up to 38 states at night!

While it's true that WHTK has underperformed in Arbitron, it's a cume problem more than a signal problem. It's not that people can't get the radio station, it's rather that they're just not turning it on, probably for other reasons.

> If they can't spread out their
> nighttime signal to at least cover the eastern suburbs (as our sta-
> tion did a few years back) they might as well take it dark, sell it

> the bottom line in the long run.

I can assure you that none of the above is going to happen. Remember, Lincoln Group just bought WHTK in 1993! While I have no connection with WHTK other than being a Lincoln Group employee, rest assured that there are plans to get the ratings up at WHTK, and they are already in motion.

Regards,

Clarke

## 433. Followup to FM Trap Question

Newsgroup: rec.radio.broadcasting
Date: 1995-06-23 00:00:00 UTC
From: C Lance Moxley <clm@uiuc.edu>
Message-ID: <3sdjup$ld6@vixen.cso.uiuc.edu>
Source record: 31102

Below is a summary of all the responses that I received on my query to eliminate FM interference on VHF TV reception. Thank you all very much for your suggestions!

The obvious solution is to make a quarter wave stub to trap out the undesired frequency. I'm not exactly sure where to put the stub in my setup. Let me explain what I have. On a 45 foot tower I have an old Wiengard(sp?) fringe reception antenna with a booster powered by a power supply inside the house. The booster has a switch for an FM trap so I obviously have that turned on. I have about 75 feet of coax going to a 5-way splitter which sends a cable to 5 tv's/vcr's. The main tv is only about 3 feet of coax away from that splitter. I have a rotor with the antenna also. What I'm running into is an FM tower directly 2 miles north of me. 100 miles north of me is Chicago. When I point the antenna north, I get the classic herringbone pattern on VHF channels 7, 8, and 9. 9 is the channel I'm most interested in. Anyway, the FM tower houses 3 transmitters at 88.7, 94.5 and 100.3 mHz. I highly suspect the 94.5mHz as being my problem. Oh yeah, I have a cheap Radio Shack FM filter right before the 5-way splitter.

Where should I put the stub? Do I use a 3-way splitter and just hang it off one end? Do I put that splitter before the 5-way splitter? Can I just use one of the outputs of the 5-way? Should I put the stub outside, up near the antenna? How does this stub that sucks air affect the performance of my booster?

Questions, questions, questions! I feel kind of bad asking these questions here, since it seems to be the exact opposite of what this newsgroup is about. I'm trying to NOT receive a radio station! Hopefully you all will give me a little slack since my workstation houses the AIRWAVES archives and Web page.

Thanks again everyone for your help.

# 435. WCLB, BOSTON CHANGES CALL LETTERS

Newsgroup: rec.radio.broadcasting
Date: 1995-06-23 00:00:00 UTC
From: repo4@aol.com
Message-ID: <3sdjuq$ld8@vixen.cso.uiuc.edu>
Source record: 31104

Reply-To: repo4@aol.com (Repo 4)

After suspecting that some listeners were confused by the similarity of call letters between Boston's WCLB (country) and WCRB (classical), WCLB changed call letters to WKLB effective immediatly. They are still calling themselves Boston's Country Club.

In recent Arbitron ratings, classical formatted WCRB has been making some unusual ratings gains. WCLB assumes that listeners are confusing the stations call letters when writing thier listening habits in the Arbitron diaries. For example, listeners will write that they listen to "Lauren & Wally" on WCRB. Well, Lauren & Wally are the morning team on WCLB, not WCRB. I believe when a mistake like this is made, Arbitron splits the credit to both stations. We'll see if the change helps.

I never had problems picking up WHTK at night. WCMF-AM, on the other
hand, didn't get much signal into the Henrietta area after dark and therefore
suffered from severe co-channel interference and, at times, adjacent channel
interference from WMVP, Chicago, on 1000KHz.
WHAM is hard to pick up in the South, not from a lack of signal
strength, but instead due to co-channel interference from stations in Cuba,
Miami, and (possibly) Mexico. I've heard that WHAM gets out quite well into the
midwest, though.

I understand that during construction of its new directional array, WINS is going to be operating at 10KW non-directionally from the small tower at the WABC transmitter site in Lodi, NJ. I noticed that ABC has removed the STL antenna that is normally mounted on that tower, and it appears that a new antenna tuning has been installed at the base. My understanding is that once operation at the WABC site commences, WINS will drop its old four-tower in-line array, and install the new four-tower parallelogram.

Interesting that Arnie Coro could hear WLS, since often I have a hard time hearing it here in Dallas now. I often get a Cuban and Radio Honduras on top of the frequency. The Cuban can be heard in parrell with the Cuban on 640, though at other times it has different programming.
I find though WLS is the easiest of the stations from Chicago to recieve. The next easiest is WBBM, followed by WMAQ and WGN.
I use to like the Jazz show that WGN had, since in Dallas at the time there was no one with good Jazz programming.

Can't say I'm jealous, because I'm not in radio anymore. Maybe a bit sadly nostalgic, having grown up with John Landecker, Bob Sirott, Steve King, Yvonne Daniels...used to pull them in after dark about 400 miles away.

Its too bad those days are gone.

> Another question, you said that the WMCA signal would mostly
> propogate toward the seas. Do ships at sea listen to AM
> radio? Can they pick up anything?

I'm sure they do. Beyond 100 miles or so, FM is gone (except during freak conditions); but AM travels for hundreds of miles. In fact, sea water is the most conductive "ground" available for AM stations, which is why so many of them try to locate their transmitters in tidewater. At high tide, WMCA's towers are all surrounded by water.

I remember that both WMCA and WINS used to talk about their listeners in Bermuda. And I recall reading somewhere that a good radio in Bermuda will pick up many East Coast AM stations, even in the middle of the day. Both WINS and WMCA already push much of their signal in Bermuda's direction. Perhaps soon WINS will send less that way, and WMCA will send more.

But in no case will there ever be a market for listeners at sea.

Doc

According to some people I know at WMCA, it will probably never happen. The cost is just too prohibitive. At the time the application was made WMCA was also in fierce competition with WWDJ (970KHZ) for dominance in Christian radio in the NY market...and they were anxious to get any advantage they could. Now that WMCA owner Salem Communications has purchased WWDJ and has a fairly solid lock on Christian radio on AM in NYC, the impetus is not what it was to increase power.

> mine! Well, since the FM went away I guess he was right! Hey Gary! I
> owe you, pal! Here's hoping you find a REAL radio station this time.
>
The same Gary Burns who sent ME e-mail while I was working out the rest of my contract, denying that we doubled the ratings in the morning. He later sent me ratings trenders which showed a .9 when I started and a 2.0 two books later. Nice of him but I wondered even then whether or not he was all together. And after letting me know that the reason they were replacing me for a "national search" was that I was "too intelligent for the audience" he denied that as well and moved in Oliver North to replace Victoria Jones who was building an audience in the afternoon.

Meanwhile, across town, Rush slumps to a 4 25-54 on WMAL while the totally unadvertised Derek McGinty on WAMU (public radio) sits with a 3.2 in the same demo. Derek's approach is, however, "too intelligent" for the WRC audience, no doubt....

What a business!
mike

## 444. Boston Radio Watch 06-22-95

Newsgroup: rec.radio.broadcasting
Date: 1995-06-23 00:00:00 UTC
From: nhmas@gauss.med.harvard.edu
Message-ID: <3sdju5$lcb@vixen.cso.uiuc.edu>
Source record: 31181

* WFNX loses program director :

Phoenix Media's AP WFNX 101.7FM is losing its program director
Kurt St. Thomas who's been at the 'Cutting Edge of Rock'
for the last 8 years. Thomas moves down to NYC to take senior director
position at Arista Records.

Possible replacements include : current asst. PD and mid-day man
'Boy' Troy Smith, MD and night-time DJ Nick Carter...

* Change of call letters means change of formats? :

After 2 years and 4 months as WCLB 105.7, Fairbanks Communications
introduced a new set of call letters for its struggling country station --
it's now WKLB 105.7FM Framingham/Boston. Make a note of that.

'KLB's afternoon jock Karen 'The Madam' Blake explained that management
was being a bit concerned that listeners were entering incorrect
call letters in their Arbitron diaries -- instead of WCLB, you'd
find such Boston area mainstays as WCRB(Classical FM) or
WCVB(local ABC-TV affil)...

WKLB insists there's no format change in the works and they're
totally committed to current country format. Reportedly,
an all-day KLB's Country Club Fest which will take place on Saturday,
July 29 at Foxboro Stadium is costing the station around one million
dollars. Country music's hottest star Clint Black is the primary act.

However, back in the early June former local talk stars such as Gene
Burns(currently recovering from a mild heart attack) and Larry Glick
were spotted visiting Fairbanks Communications offices at the Prudential
Tower...Strong rumor still persists that FM-talk will take over 105.7
sooner rather than later...

WKLB's main competition, Greater Media's equally low-rated WBCS 96.9FM
which fought to keep its calls(say WBCS-WBCN really fast :-) around
this time 2 years ago is sponsoring a smaller 'WBCS Country Sunday'
benefit show at the Great Woods Perf. Arts Center in Mansfield,Mass on
Sunday, July 2. Acts scheduled to perform are Tim McGraww, BlackHawk,
Little Texas. Yee-ha!

* Sports Shorts :

- All-sports WEEI AM 850 new PD Glenn Ordway has begun reshaping station's
sound with some cosmetic on-air changes. The noticeable one is where
a calling listener is only allowed to speak for no more than a 2 minutes
whereas before some of these boring callers would linger for 4-5

minutes. The caller is no longer referred to by first name and town --
just plain 'you're next on....'.
Major on-air line-up changes are expected sometime in September.

A new Celtics' broadcast play-by-play team on WEEI is expected to be named soon -- candidates include such familiar local voices as Doug Brown and Mike Adams, former sports anchor at the regional New England Cable News...

- WBZ AM 1030 which begins carrying Boston Bruins hockey starting this fall is airing this year's Stanley Cup Finals courtesy of NHL Radio Network...

- WBZ and WEEI will both provide very extensive Patriots' Sunday morning pregame shows this fall. Patriots' new flagship WBCN-104.1FM's pregame will answer with its enthusiastic sports director Paul 'Tank' Sferuzza and wisecracking Sunday morning jock Bill Abbate.

-Mark

From: fybush@world.std.com
Message-ID: <3sdju6$lcc@vixen.cso.uiuc.edu>
Source record: 31182

*From our "Huh?!??!?" file this week: Wednesday morning (6/21), WCLB 105.7 Framingham-Boston switched calls very abruptly...to WKLB. Nothing has changed with the station's country format, or with the on-air team (though they are running the satellite-delivered "After Midnight" all-night show now). A call to WCL--er, WKLB late last night produced the response, "We did research that found out people were getting confused by the "C," so we changed it to "K."" Mm-hmmm. My guess is that the confusion was in the ratings diaries, between WCLB and classical WCRB... and maybe even with similar-sounding suburban country WCAV-FM. The official calls, btw, have to be WKLB-FM, since WKLB(AM) is 1290 in Manchester KY.

A strong stomach helps a lot.

That's really kind of like asking "what kind of car should I buy?"

Are we talking large market or small market? On the air or dark? successful or turn around?

The best form of financing is always from the seller but rarely available in cases where it is most
needed.

Avoid at all costs buying a radio station because it seems like a fun thing to do and also having your
best friend sign a big note because he has money and you have radio experience. That almost always
never works.

## 447. Digital Music Express VS. FM Radio

Newsgroup: rec.radio.broadcasting
Date: 1995-06-23 00:00:00 UTC
From: gcjh1@aol.com
Message-ID: <3sdju7$lcf@vixen.cso.uiuc.edu>
Source record: 31184

Reply-To: gcjh1@aol.com (Gcjh1)

Thoughts Wanted:

Will FM radio as we know it ever be replaced our even threatened by Digital Music Express (DMX) or other similar digital satellite services?

For those of you who don't know what DMX is ... It's a 76 channel satellite radio service (30 channel via cable) that is being sold to the consumer and commercial market. It's 100% digital and has no talk or commercials.

The real questions is do you think a consumer (not business) would pay a fee
+/- $6 for cable - $18 for satellite for music and would it effect music based format FM stations like cable did to local TV?

My company sells DMX service to commercial establishments in Western MA and Rhode Island. It's a great deal to business since it's only a couple of bucks more than Muzak with 10x the selection and pays ASCAP for you, YET I don't see the comsumer side spending the $$$.

So as radio folks what do you think? Will this kind of service have any effect on FM? I personally like high profile jocks on the radio and will listen to a station at times more to hear the personality then the song.

Gary Hanna
Pres. Hi-TECH SOUND, Framingham, MA

Message-ID: <3sdju9$lcg@vixen.cso.uiuc.edu>
Source record: 31185

IU>50,000-watt WNRB, to whom almost nobody listens, and 50,000-watt WBZ
IU>rules the market. In the last analysis the local advertisers who make up
IU>the bulk of a radio station's revenue will always be more accessible to
IU>a local broadcaster than to someone who tries to do business by fax or
IU>e-mail from New York; likewise, there is a demonstrated preference among
IU>listeners for local signals-- the same WBZ which is number one in Boston
IU>puts a listenable daytime signal into Albany, 150 miles to the west, yet
IU>it's barely a blip in the Albany market.

Rob,
All signals are local, some of the programming may not be. To compare
a distant signal with a local one isn't very productive. I used to live
in Western MA and WBZ's signal is hardly one that's clean enough for
non-fatiguing listening.

Remember, also, that WBZ is owned and operated by a company in New
York. New York headquarters has substantial control over its
programming.

If local programming is the be all and end all of radio, all those
misguided stations with high ratings during the Limbaugh show must be
very upset. It's also interesting to me to see the cookie-cutter
"Lite-FM" formats be so successful. There's nothing but canned music
(recorded elsewhere), and "local" announcers reading liner cards that
have such "local" slogans as "Turn on the Lite." They've generally got
high ratings and virtually no local content. WLTW in New York could be
plopped down in any market, virtually unchanged, and sound like the
"Lite" stations already there.

The real bottom line on success in radio is good programming, period,
regardless of where it comes from. I look at the TV model as an example:
Almost universal use. Very little "live." Very little local.

Even WCRB isn't very local when you look closely. Guys named Amadeus,
Wolfgang and Johann (all dead, incidentally) aren't usually found next
door. What makes WCRB a successful classical station is the fact that
it's been doing it consistently for decades. It also helps that Amadeus,
Wolfgang and Johann wrote awesomely great music. Not local, but still
great.

We need to differential between "local" programming and local
service. It's the local service that makes the difference. Any station
that plugs into a satellite and walks away deserves to fail miserably.
Those are the stations that even networks don't want. The great stations
have news departments that surround the canned "local" music and network talk
with things that help listeners negotiate the day.

I see no advantage to a local talk show host yelping about how bad Clinton is over a network host doing the same thing. The great station surrounds the yelping with local traffic that tells me how to get home before next month.

Rich

Rob, while you're at it, why not profile the duopoly adventures of the owners of WRKO, WHDH et al and how that impacted on the market. Boston went from a three or four talk format station town to a one in a few years and has there been an increase in quality of product or public service since? You know my experience with that company, or at least the surface of it, but the things that were done there made no market sense and no public sense. And we are to INCREASE the chances of it happening again....Whew.

# 450. Re: FCC AM Database FTPable

Newsgroup: rec.radio.broadcasting
Date: 1995-06-23 00:00:00 UTC
From: arog@BIX.com
Message-ID: <3sdjua$lci@vixen.cso.uiuc.edu>
Source record: 31187

There are several record 'types' in the AM Data Base.

The first is a 'header record' that defines the version
of the file. There are some differences based on the version
listed.

The last is the trailer record, that also serves as an End Of File
flag.

Then there is the main data record, which has the station's call
and other info, two possible records for added tower elements,
and a record for 'agumentation' elements for the antenna system.

All of these records are in a Fixed Field format. ie, it's the
possition in the record that matters. This makes for a problem
in terms of importing them into most of the data base products
that are around. R-Base 3.1 come close, but it is limited to
4096 records in the file. SuperBase4, dBxl, Paradox 3.5 all seem
to have a problem with that format for importation. I've not found
my copy of Alpha-4 in my mess nor any of the other things that
I KNOW that I've got floating around.

So, I spent the afternoon with the record spec and the word.cruncher
doing the [pardon the expression] COBOL "pics" for this. Tomorrow
I proof-read them to see how bad I munged it all.

If I don't get a Priority_Interupt [aka, something that makes Money
to do] I'll end up with files for the main records, the tower records
and the augmentation ones. Once that works, then I can worry about
inserting ',' between each of the records so that I can import this
stuff into a Data Base and work with it.

## 451. Re: Ferrell On The Bench?

Newsgroup: rec.radio.broadcasting

Ferrall is the first of a new breed. There is nobody else like him. He plays heavy metal. He jabbers in a rapid mumbling monotone, like a drunk auctioneer. He pours beer for his listeners. He originates more fresh sports jargon than anybody since Dick Vitale took his first rock to the rack. And he stands out among the old plaid jackets (Pete Franklin), TV sportshosts (Gary Radnich), gutpunch opinionasts (Ralph Barbieri) and nice-guy sports talkers (Bob Fitzgerald) that populate the rest of KNBR's schedule.

Oh... and he really knows his stuff.

As an influence Ferrall reminds me of B.Mitchell Reed when his fast-talking act first hit the air on KFWB and WMCA, stretching out the Top 40 envelope. Of course, Ferrall would rightly deny any influence, since BMR had already dropped that act before Scotty was even born.

There is a piece slamming Ferrall, and the rest of KNBR's talkers, in the SF Chron today. Seems all of them perform, all of them opinionate, and none of them interview. News and Truth are not their things. Which is true, of course; and which fits the pattern. After all, the whole station's schedule is anchored by none other than the biggest non-interviewing opinonast of them all: Rush Limbaugh.

Doc

## 452. New Format

Newsgroup: rec.radio.broadcasting
Date: 1995-06-23 00:00:00 UTC
From: TRRadio@aol.com
Message-ID: <3sdjud$lck@vixen.cso.uiuc.edu>
Source record: 31189

The following was sent to me regarding the NJ/MD/DE Broadcasters meeting earlier in June.

NEW FORMAT UNVEILED IN A. C.

About 400 radio and television people from four states gathered last week at Trump Castle Resort and Casino to exchange information and catch up on the latest in the industry. Separate seminars were held for sales, programming, engineering and management.
The radio market is already pretty fragmented, but Bob Henabery Associates unveiled their idea for yet another possible program format. "Sets FM" is targeted at 40-year-old men and women, but could be a hit with the 25-54 age group, Henabery said. The format would play at least two consecutive songs by the same artist, mixing current hits with old favorites. Artists in their sample music hour are: the Beatles, R. E. M., the Eagles, Robert Palmer, the Doobie Brothers and the Beach Boys.
Will this take off? Time will tell.

>Sure, ISDN can be used over almost any standard phone line in a
>number of cities, but is this feasible /possible for
>broadcasting a game that only lasts a few hours?

It's less of an issue of "phone line conversion". For the most
part, the telco will install a whole new one.

Your local telephone co's policies and tarriffs will be the
determining factor. Some require min. 6 months commitment. Some
price ISDN installation high enough to discourage "dropping in" a
line.

Good luck

I'm surprised they install and pull the lines for each game. It seems it would be much more economical if the host team would simply provide an ISDN line for the visiting team. That way, each team would provide roughly equal service for each other which would cost less than providing out-of-town service for themselves when they travel.

My ISDN service costs less than $75 per month plus standard LD rates.

Just a thought.

Grant

Hi. Can y'all use this at Airwaves? Thanks! Stephanie Burkhead

For immediate release
Contact: Richard Carvell
501-972-3070

New Station Manager for KASU

William A. McGinley of Bismarck, N.D., has been appointed station manager for KASU-FM, the public radio service of Arkansas State University, announced Richard Carvell, chair of the Department of Radio-Television.

Most recently McGinley was Radio Manager for Prairie Public Radio, the five station radio network serving western two-thirds of North Dakota.

His credentials include some 30 years of diverse broadcast-related and teaching experience at academic institutions such as the University of Minnesota, Mankato State University, and Indiana University, and at media outlets such as KMSU Radio, KULR-TV, KGVO-TV, and WTTV-TV.

"We're pleased to have Bill come on board, especially during this time when public broadcasting is facing major changes in the way it is funded," Carvell said. "His excellent background at development activities at other public broadcasting entities will help us to make a smooth transition into public broadcasting beyond the 90s."

McGinley obtained his master's degree in Radio/TV in 1968 from Indiana University, and a bachelor's in Radio/TV in 1966 from the University of Montana.

Mr. McGinley's honors include the 1993 Broadcaster of the Year Award, given by the Association of Minnesota Public and Educational Radio Stations. Additional distinctions include service on the Board of Directors for the Mankato Symphony Orchestra, honorary membership to the Great Northern Railway Historical Society, and participation in the Bismarck-Mandan Chamber of Commerce Leadership Program.

McGinley and his wife Diane have two children, Elizabeth, 19, and Julia, 14.

Source record: 31197

I would love to get a response from radio people and others about this:

I work for a company that is interested in organizing a promotion with a local radio station. We would probably just sponsor it since we are a local singles service/dateline, maybe have a "singles happy hour" at a local bar, etc. I would love to know what "different" types of singles promotions have been done around the US involving singles and radio stations. I put different in quotes because happy hours at bars get boring... and being single, I wouldn't think of a happy hour for singles at a bar being very special. So if you've participated in any neat promotions, have an idea for a promotion, or have actually organized such a promotion, post ideas! Any suggestions would really help. Oh, yeah, and if the promos. have been tried before, could you tell us if they were successful?

I'm sure there are some promo. directors that would love to exchange and get new ideas (about this and other things).

If this has been done or tried before, sorry.

Thanks!

Maheesh Jain

Two questions:

1) Why, then, buy WFIL/560 with the (at least partial) purpose of reducing its power to make room for a bigger WMCA? I don't know if this was the strategy,but it has been reported in at least one place I found.

2) Why not crank WMCA up to the full power, sell it for much bigger bucks than was paid for it (something like $9 million), and use the money on other things, since the NY Christian market might be served well enough by WWDJ?

Now a third, for you:::

How does the current WBBR transmitter compare with the old two-tower one (WNEW's original) that was across the turnpike from WMCA? This is pure curiosity. I remember thinking the signal wasn't as good after the move. But I thought the same thing about WOR when it left the old two-tower site in Cartaret and moved to the new 3-tower one up near WLIB and WINS. By the way, the old WNEW site is still there. The shack is overgrown and the old boardwalks to the towers are rotted away; but the towers are still there on the ground, right were they were dropped, their capacitive "umbrellas" rising out of the muck like big old spider webs.

Also: do you know what power WINS will be running at the WABC site? And will the new WINS parallelogram be comprised of bigger towers than the old ones (which were tuned for another frequency, no?)

Doc

# 465. WPTR RADIO GREATS REUNION

Newsgroup: rec.radio.broadcasting
Date: 1995-06-25 00:00:00 UTC
From: WGYA81B@prodigy.com
Message-ID: <3sitf6$p7d@vixen.cso.uiuc.edu>
Source record: 31052

For those who have grown up or have been a part NYS Capital District radio, WPTR is holding it's radio greats reunion with many of the WPTR and WTRY personalities. WPTR is holding this prior to their sale and ultimate format change rumored to be religion.

On the air the this weekend:

Boom Boom Brannigan, Joe Condon, Rick Snyder, Wild Child and believe it or not Herb Oscar Anderson. FYI, Herb never worked in this market, however, whenever he spoke of going to the farm on WABC it was his farm in a rural town not far from Albany.

It is interesting to hear the 50,000 watt tower of power once again.

Paul Cassidy/WGY

## 466. Re: WRC...help wanted

Newsgroup: rec.radio.broadcasting
Date: 1995-06-25 00:00:00 UTC
From: talk1370@aol.com
Message-ID: <3sitf7$p7f@vixen.cso.uiuc.edu>
Source record: 31053

Mike---
If Derek McGinty is knocking on Limbaugh's door, and Ollie
apparently is missing the boat totally, two questions come to
mind;
1)How long will Ollie last on WRC before he's banished to the
boonies of mail-order Jesus radio, where he clearly is a better
fit? Presumably the setup is such that they're free to cut him
loose from 'RC and let him find any DC outlet that'll take him...
aren't they? (Or did they really screw themselves by locking
into a long term carriage contract, come what may?)
2)Will that station's ownership remain oblivious to what's happen-
ing to them...with the second-best AM signal in the market
and chronic underperformance while an NPR station with no
promotion budget is kicking its ass? Doesn't ANYONE see
that the right wing nutbar demo just isn't big enough in DC to
get them any ratings or $$$? (And there are probably very
few large markets where it will do any better, especially after
Oklahoma City)
You know, this reminds me of what's happening all over the
country...people who misunderstood Rush's initial success as a pol-
itical phenomenon rather than an entertainment fad, and now are
wearing out the format's welcome. I've said that before, I'll say it again
in hopes that talk programmers figure it out and save the format before
it marginalizes itself. I really shouldn't be saying this, I suppose.
After
all, in my market I'm probably one of the chief beneficiaries of these
stupid management tricks on the part of my format competitor. But
I hate to see it happen nevertheless...because I think we ALL lose if
talk radio as a format takes a big drubbing in the years to come.

Bob Smith, middays WXXI-AM 1370 Rochester NY

# 467. WWRC'S NEW REACH

Newsgroup: rec.radio.broadcasting
Date: 1995-06-25 00:00:00 UTC
From: DrMilo@directnet.com
Message-ID: <3sitf8$p7h@vixen.cso.uiuc.edu>
Source record: 31054

Does anyone know how far WWRC signal reaches (North and South) now that they've upgraded their transmitter.

Frequently Asked Questions (FAQ) File for OTR
The Old-Time Radio Newsletter
(FAQ Edited by Lou Genco (lgenco@crl.com))

Last Modified: Thu 06-15-1995
---------------------

Copies of this FAQ are distributed monthly to rec.answers and other
newsgroups, and are on file at bloom-picayune.mit.edu in the file
/pub/usenet-by-group/news.answers/radio/old-time-faq. Updates may
occur more frequently than the normal distribution schedule. The most
current version is available by anonymous FTP from ftp.crl.com,
directory: users/lg/lgenco. See FAQ for more info on ftp and WWW
access.

---------------------

Table of contents:

Q1. What is "OTR"?
Q2. You haven't mentioned OTR music, why not?
Q3. Where can I buy recordings of old radio shows?
Q4. Which vendors have (lower prices) (higher quality) (faster
response)?
Q5. Are OTR shows rebroadcast? If so, where and when?
Q6. I remember a great show called (x). When was it aired?
Q7. Are there any books about OTR?
Q8. Does anybody trade tapes of OTR shows?
Q9. What's this stuff about Copyright?
Q10. How can I get my local radio station to broadcast OTR
programming?

sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
Q14. Is there anywhere I can get a complete listing of all the
episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the themes of
OTR programs?
Q16. Is there a World Wide Web page (URL) or FTP address that I can
```

access for more info?
Q17. How do I subscribe to the OTR electronic newsletter?
Q18. Can I get archived copies of old issues of the OTR newsletter?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your FTP site?
---

Q1. What is "OTR"?
A1. OTR is an abbreviation for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the early 1950's. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures.

Q2. You haven't mentioned OTR music, why not?
A2. There was a good deal of "big band" and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. There is no restriction to discussing OTR music in the OTR Newsletter.

Q3. Where can I buy recordings of old radio shows?
A3. There are several individuals and companies willing to sell tapes of OTR programs. A partial list can be obtained from my OTR WWW site or FTP address listed later.

Q4. Which vendors have (lower prices) (higher quality) (faster response)?
A4. Prices, quality and service differ somewhat among all vendors. Check with other subscribers to the OTR newsletter to learn of their experiences, then check with potential vendors.

A comparitive price chart, listing many vendors, is available at my WWW site.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the archive site, and my FTP / WWW sites.

Q5. Are OTR shows rebroadcast? If so, where and when?
A5. Yes, several AM and FM radio stations, satellite feeds and a shortwave station rebroadcast OTR. Check my OTR WWW page site for current info. If you learn of other sources, leave a note!

Julian A. Smith (jsmith@blues.epas.utoronto.ca), Frank Passage (passage@pluto.dss.com) and Bill Pfeiffer left the following information:

For AM listening, try the brand-new National Radio Club's _AM Radio Log, 15th Edition: Complete Listing of U.S. and Canada AM Radio Stations_ (Mannsville, N.Y.: NRC, 1994). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price range: $20.00]

For FM listening, I'd suggest Bruce F. Elving's _FM Atlas_ (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has _maps_ of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx $1.00 s/h]

The M Street Radio Directory, M Street at 800-248-4242 or +1 212 473 4668 voice, or +1 212 473 4626 fax. The address is M Street Corp., 304 Park Ave S Floor 7, New York, NY 10010 USA. costs $29.95 + p/h,

Those lucky listeners living near Boston can have a periodic update of local OTR programming by sending email to Noah Schaffer, at nschaff@k12.oit.umass.edu. Noah will send you monthly OTR & Radio Drama updates, including program titles and station/frequency/time data.

Q6. I remember a great show called (x). When was it aired?
A6. Check with subscribers to OTR newsletter, or look through the program databases (WWW or FTP). Also see answer A14 below.

Q7. Are there any books about OTR?
A7. Yes, there are several books related to OTR. See my WWW page or FTP site for a list of some of them.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch <henry@g0gku.demon.co.uk> related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

Q8. Does anybody trade tapes of OTR shows?
A8. Yes. Check with subscribers to the OTR newsletter. We hope to get a database of private traders as well. Leave a note in the OTR newsletter if you want to trade, or send email to me if you want your library to be listed in the on-line database.

Q9. What's this stuff about Copyright?
A9. The copyrights on most OTR shows have expired. A few copyrights have been renewed. Examples of the latter include The Shadow (Conde Nast) and some of Arch Oboler's productions. See my WWW site for the latest "common sense" and legal citations.

Q10. How can I get my local radio station to broadcast OTR programming?
A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase listenership and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us: "The days of radio being ruled by the artisians is over, and for some time now it has been in the hands of people who only look at the bottom line, so to reach them you must talk through public radio pledges, or through sponsors on commercial stations."

Q11. I have some old transcriptions and tapes, how can I make them sound better?
A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

Randy Riddle (Rriddle@aol.com) left this information:

There's a firm that sells archival quality turntables and sound processing units that can dramatically improve old recordings. Their sound processing unit runs around $300.

Audio 78 Archival Supplies
PO Box 187
San Anselmo, CA 94979
415-457-7878

Henry Brugsch <henry@g0gku.demon.co.uk> left this information about Digital Audio Format (DAT):

The dat-heads mailing list maintain an archive of all their material at the following site:
ftp.atd.ucar.edu. Log on with the usual anonymous then, your routine password. head on over to

/pub/dat-heads/ You will find a wealth of info up
there. All the digests to the current day, and mike
faqs, as well as market postings on equipment. Highly
recommendable for anyone to get their feet wet in this
media. Happy taping

Q12. Are there any OTR clubs near me?
A12. Check the two club listings in my WWW page, and
leave a note in the OTR Newsletter asking about local clubs for
your area. Send me email if you want your club listed.

Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
A13. Sometimes broadcasts are dated according to their original
broadcast date, and sometimes according to a date on which they
have been rebroadcast. For instance, the Armed Forces Radio
Service rebroadcast many Mutual Radio transcriptions at a later
date. Your tape may be of one of these later dates. Alternately,
somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes
on different programs! For instance, a few Suspense shows were
re-scripted / re-cast for Escape. You might also find similarities
between certain SF shows as done on X minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the
episodes in a particular program serial?
A14. Some of the larger vendors / collectors may have this data. If
you find such a publicly available source, we can make it
available in the Internet OTR file repository.

Some of the OTR Newsletter subscribers have contributed Program
Logs for several well-known series. The logs are available at my
FTP/WWW site.

The "logs and publications" entry in my WWW page gives names
and addresses of several vendors of these items. It can be FTP'd
as sou_pub.otr. (Thanks to RadioJoe5@aol.com (Joe Coleman))

Jay Hickerson maintains several logs and lists, as well as -Hello
Again-, an OTR newsletter. Jay is the author of -The Ultimate
History of Network Radio Programming and Guide to All Circulating
Shows- (last supplemented in Oct 94). Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the
themes of OTR programs?
A15. Again, some vendors include this information with their
catalogs. If you would like to contribute your interpretations of

the themes, send them to the OTR newsletter for inclusion in one
of our databases.

Jim Widner has contributed some synopses / introductions to
various programs. They are on file at his and my WWW/FTP sites.

Q16. Is there a World Wide Web page (URL) or FTP address that I can
access for more information?
A16. Yes, there is a growing number of WWW sites, as well as FTP sites
and a Gopher. Each site contains different information, so you
might want to visit them all. The sites listed below are good
places to start. If you learn of any others, I'd appreciate
your informing me via email!

(1) My site:

World Wide Web URL:
http://www.crl.com/~lgenco/otr.html

FTP:
Anonymous FTP to ftp.crl.com
directory: users/lg/lgenco

(2) AIRWAVES E-Publishing's Site (courtesy of Bill Pfeiffer):

FTP:
Anonymous FTP to radio.aiss.uiuc.edu,
directory: misc/rec.radio.b-cast/OTR.

GOPHER:
gopher radio.aiss.uiuc.edu 7070
(select "OTR")

World Wide Web URL:
http://radio.aiss.uiuc.edu/~rrb

For subscribers without normal FTP access, there is a
FTP-by-mail server that will automagically send you a copy of the
latest OTR FAQ. To receive a FAQ, send email in -exactly-
this format (the case of the file name IS important):
To: lgenco@crl.com
Subject: Request otr.faq
(the body of the message is ignored)

Q17. How do I (un)subscribe to the OTR electronic newsletter?
A17. To subscribe, send email
To: old.time.radio-request@airwaves.com
Subject: SUBSCRIBE

To unsubscribe, send email
To: old.time.radio-request@airwaves.com
Subject: UNSUBSCRIBE

(The body of the message is ignored in both cases)

Q18. Can I get archived copies of old issues of the OTR newsletter?
A18. Yes. The OTR Digests and Index are updated three times a week, and are accessible through the first two WWW pages mentioned above, or from the AIRWAVES anonymous FTP site mentioned above, or from the Gopher mentioned above.

Readers with a WWW browser can access a "smart" archive program. This program can sort and display old OTR articles by author, subject, thread or date submitted. Just the thing to use when you want to catch up on a discussion thread, without plowing through a lot of extraneous material.

To access this service, point your browser at:
http://radio.aiss.uiuc.edu/~rrb/online.html

Q19. What is the best way to archive OTR programs?
A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2000 range, and used reel machines are becoming harder to find.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS) reel tapes. This may lead to a greater loss of signal (paraticularly high-frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time.

Some subscribers have mentioned Talking Book tape recorders as a possible archival method. These recorders operate at 15/16 ips (half the speed of a standard cassette recorder), and can operate in 4-track mode, thus giving up to 6 hours of play time on a standard 90 minute cassette. As yet, we have no info on long-term longevity of these recordings.

Don Coco (djc@crl.com) left the following information about sources for Talking Book type equipment:

The American Printing House For The Blind
1839 Frankfort Ave.
Louisville, Kentucky 40206
Tel. (502) 895-2405
Sells Braille and recorded books, 4 track recorders which record at 15/16 IPS, and other products of interested to Visually

Impaired persons. Price of 4 track recorder around $175

I.R.T.I.
1411 West El Camino Real
Mountainview, Ca. 94040
Tel. (415) 961-3161 or (800) 322-4784
Sells all including Radio's, TV's with SAP, Reading Machines,
Computers ETC.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in
response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment
division at 1-800-622-0022 or call Radio World
magazine at 703-998-7600 for subscription
information. Radio World is an industry trade and has
used equipment listings in the classifieds once a
month.

(Jim Blackie [jblackie@aol.com] indicates that the
Harris/Allied number has changed to: 1-800-300-0733.)

Q20. My old reels squeak. Why does this happen, and can I fix it?
A20. There are at least two causes for "squeaky reels" on a
reel-reel tape recorder. (1) The tape edge may be rubbing
against the rim of a distorted take-up reel, or (2) the oxide
may be sticking to your erase (or other) heads. If the former,
the least frustrating alternative is probably a new take-up
reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like
to recover, I will be glad to send you more
information on how to do it. Just send me a
stamped self addressed # 10 envelope and I will
respond. Send your request to: Fred Korb, c/o
Oldtime Radio Collectors and Traders Society, 725
Cardigan Court, Naperville, Illinois 60565-1202.
I am willing to help you preserve the sounds of
radio days gone by.

[Editor's note: Fred's method consists of a kit by which a
lubricating film can be automatically applied to the tape as it
is played. I tried it. Although temporary, it does indeed work!
I'd recommend it for those squeaky tapes that you wish to
re-record onto newer reels.]

Richard Fish <lodeston@bluemarble.net> also left this helpful
info about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the
backing, or the binder compound used to stick the
magnetic particles to the plastic backing -- has absorbed
water from the air. The water molecules actually make

the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the formulation of the plastic backing and binder. In the mid-70's, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-80's. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:

Bake the tapes in a convection oven for 8 hours at 130 degrees Fahrenheit. It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water. So the best deal is to bake the tape and immediately make a copy. But if you forget to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?
A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono newsgroup, created by Bill Robie. A pointer to his FAQ may also be found at my WWW site.

The WWW site, "The Bellingham Antique Radio Museum" is also available through my WWW site, or directly via URL http://www.pacificrim.net:80/~radio/ This site contains info and GIFs on old radio hardware, as well as soundclips (.au files) of OTR show intros.

The University of Maryland also has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through my WWW site, or directly via the URL:
http://www.itd.umd.edu/UMCP_Libraries/BPL/bpintro.html

Q22. What is the best radio / antenna to get distant OTR stations?
A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios. A SuperRadio FAQ is available at my WWW / ftp site.

-Some- readers hav- had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference. Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing.

Dan Hughes <dhughes@prairienet.org> left this note:

Several years ago one of the electronic magazines ran plans with dimensions and number of turns, etc to build one of these antennas. I have built several and I'm no mechanic. If you (or anyone else reading this) would like a copy of the article and plans, drop me a stamped, self-addressed envelope: Dan Hughes, P.O. Box 933, Urbana IL 61801.

If you are interested in AM Broadcast Band reception, and technical artlcles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY 13667-0164

Q23. Is there a group for modern radio drama ("new-time radio")?
A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you. There is also a mailing list for folks interested in current radio drama:

Send email to: majordomo@world.std.com
Subject:[blank]
text: subscribe radiodrama

Q24. I have only email access to the Net. Can I still get the files at your FTP site?
A24. Yes. There are several FTP-by-email servers. Contact one of them for instructions.

ftpmail@decwrl.dec.com
with no subject line,
and two-line body with line one help and line 2 quit

ftpmail@grasp.insa-lyon.fr
(body: help) Please, European users only.

bitftp@pucc.princeton.edu
(body: help or ftplist for a list of anonymous ftp sites)

BITFTP@DEARN or BITFTP@vm.gmd.de
(body: help or ftplist for a list of anonymous ftp sites)
(Europe only)

==========

## 469. New Content at http://www.nexus.org/Internet_Radio/

Newsgroup: rec.radio.broadcasting
Date: 1995-06-25 00:00:00 UTC
From: alfredo@nexus.org
Message-ID: <3sit1d$od7@vixen.cso.uiuc.edu>
Source record: 31113
Cross-posted to: rec.radio.broadcasting,rec.radio.info

[Moderator's Note: Please note that according to Alfredo's page, the *RealAudio* files may be going away by July 15th 1995. Please visit the site soon to hear these great files, including (blush) an interview Alfredo did with me last year, about pirate radio... Bill]

At "Internet Radio Nexus (IRN)" we added new RealAudio files this week for aproximately 2 hrs listening time. Point your WWW Browser to IRN's Home Page at http://www.nexus.org/Internet_Radio and look at audio clips marked with a "NEW" Icon.

All files are excerpts from present and past IRRS-Shortwave's broadcasts on 7,125 kHz Shortwave to Europe. A pointer to the RealAudio player is also provided on IRN's Home page.

New files this week:

(*)-UN Radio Report from the former Yugoslavia, 16 June 1995 [04:55]
(*)-The World in Review, 16 June 1995 [14:13]

-India's Prime Minister P.V. Narasimha Rao presents "Ghandi in the Global Village" [02:29]
-Dubrovnik revisited: a time for peace [24:32]
-A tribute to the two Bobs : Bob Thomann and Bob Zanotti and their last "Swiss Merry goes round" [14:36]
-Special on Waco & sects (part1) (from Hello There) [31:01]
-Special on Waco & sects (part2) (from Hello There) [25:48]
-The Global 500 Challenge, Story # 3: Francisco "Chico" Mendez (Brazil) [02:17]
-The Global 500 Challenge, Story # 4: Michael Werickhe (Kenya) [02:33]

(*) Items marked (*) are updated weekly each Friday night at around 23 UTC

For further information please send e-mail to: info@nexus.org.

Thanks for listening, and stay tuned!

73,

Alfredo E. Cotroneo

# 470. Baltimore RadioWatch 6/24

Newsgroup: rec.radio.broadcasting
Date: 1995-06-25 00:00:00 UTC
From: James Purther <73124.3307@compuserve.com>
Message-ID: <3sit0l$oar@vixen.cso.uiuc.edu>
Source record: 31114

>From Charm City...

On air staff changes continue. Tim Watts, formerly middays on V103 (WXYV-Urban), is now handling morning drive on magic 95.9 (WWIN-Urban AC). Lorenzo "Ice T" Thomas is now in PM drive at V103 with Lauren Thompson remaining in middays and Jammin' MC Jammer moving back to weekends.

WJHU dropped classical music from its 9a.m. to 5p.m. weekday line-up. Replacing classical will be a talk and information programs. Among the additions are "The Diane Rehm Show", "Fresh Air with Terry Gross", and "Midday Edition" from Monitor Radio. Although WJHU is technically a Washington D.C. station, it draws well in Baltimore competing with classical station WBJC.

WCBM dropped Ken Phillips as their meteorologist this week. It is unclear if the reason was dissatisfaction with his performance or a cost cutting move but we'll be watching for more changes. Ken Phillips is the meteorologist for the local ABC TV affiliate.

Jerry Moshenberg "Pro Wrestling Talk" returns to Baltimore's airwaves from 8p-10p on WWLG. The program previously aired from 1989-1992 on WCBM, WCAO, and WITH.

Hot rumor is that WRNR (Annapolis-Rock) will be sold. A format change is a possibility but a tweaking is more likely.

and Kato Kaelin's appearance at a local bar for 98 Rock's morning show (WIYY-AOR) raised $2000 for WBAL Radio Kid's Campaign.

Stay tuned,

Jim Purther

Up & down the dial in the #40 market:

*OK,so we actually start in the #44 market-Rochester. WHTK(1280,hot talk; Hot Talk 1280)brings aboard ex-New York Governor Mario Cuomo's radio show syndicated via Sony Worldwide(SW)Networks tomorrow morning;the show's from 9am-noon. Also of note:Lawyer Alan Dershowitz's show,also syndicated via SW Networks,will be on 'HTK's sister station WHAM(1180,news/talk;NewsRadio 1180) Sunday nights from 11pm-1am. Don't look for Cuomo's show to pop up here anytime soon-if only for this reason:a whole bunch of shows presented by a number of businesses(or whatever they're called in radio),with WGR and WWKB the biggest pratictioners of it.

*Couple of(apparent)jock changes:
-WKSE(Kiss 98.5;CHR)has-it seems-yanked Jeff Hayes from 10am-noon and put weekender Van Dusen in his place.
-WUFX(AOR;103.3 the Fox),apparently,switched night jocks. Ed Banas(known on air as Mr.Ed)has been replaced by Jason.

*WGR(NewsRadio 55)PM drive sports talker Chuck Dickerson(aka The Coach)was put on suspension by WIVB-TV(ch.4,CBS)for extending the middle finger a couple weeks ago on the station's Sports Sunday show. Chuck flipped the bird to show his disapproval of Sports Illustrated's Paul Zimmerman(Dr.Z). Dickerson is off for the next 2 weeks at WGR(whether it's related to Channel 4's move is unknown);stepping in for him is Art Wander-moving in from the 6-11pm shift. Jeff Morrison is handling that shift.

*Across the border:
-CJEZ(97.3,Toronto,classic hits;Z 97.3)will launch their new format either around or on Canada Day(July 1). Mike Cooper will now handle AM drive. he was most recently handling that shift at CHAM(820,Hamilton,country)but Mike's probably best known for his PM drive show at CFTR in the 80s(when it was CHR;it's now 680 News)which did very well,ratings-wise.
-Pardon me if this sounds,well,morbid. One of my tipsters told me this story,which happened a couple days ago. An elderly woman called Laurie Walsh's talk show on CKTB(610;news/talk)Wednesday and was discussing local history with Walsh,and just before 5pm,the caller's thoughts began to wander. Walsh wrapped it up by saying,"Thanks for the history lesson"-which was followed by the sound of the phone clunking and some gasping in the background. Laurie then said she was worried about the caller,and if anyone knew who she was to call in-then jumping to music & clearing the lines. Someone phoned in a few moments later,saying they didn't know her name but thought they know where she lived. 911 was called,and a few minutes later they could hear on the speakerphone paramedics working on the patient,as it was still off the hook. Unfortunately,they couldn't revive her.

-Here's the spring BBM's for the Niagara region,supplied by a subscriber
to it. It only covers the full region,however-and consists of the 18+ cume
numbers.

Stn./freq. Format/positioner Sp.'94 Sp.'95 Change
---------- ---------- ------ ------ ------
CHTZ/97.7 Album rock(97.7 HTZ FM) 240,800 247,600 +6,800
CKTB/610 News/talk 135,200 161,300 +26,100
CHRE/105.7 Adult contemporary(Light 105.7) 35,000 36,900 +1,900
CHSC/1220 ? 35,400 40,600 +5,200
CJRN/710 Full service;Blue Jays 45,000 43,200 -1,800
CKEY/101.1 Modern hits(FM 101 The Planet) 21,300 29,100 +7,800

-Notes:
-CKTB had an all-time high of 165,000(full coverage,12+),gaining 45,100
from the fall book.
-HTZ was up in 18+ from last spring. Some loss in teen listeners,but in
key demos,the showing did improve. Compared to last spring,the 18+ circulation
was up by 76,000 and hours tuned in was up by over 100,000 hours.
-The bulk of CKTB & HTZ's growth was from out-of-market audience.
-CFNY(102.1 The Edge)scored very well in Niagara,but no numbers-none were
given.

-Finally,Henry Shannon-longtime traffic reporter at CFRB(1010,news/talk/
Raptors;The Source)will retire from the traffic grind next Friday-5 days after
he reached 65. He's been with 'RB since 1963,and was at one point its AM driver,
until he moved into doing something else in 1969. Shannon has logged 400,000
kilometers in the air each year(and one of these days,you might see his name in
Guinness' book of world records-he's been wanting to tally up the total).

# 472. San Diego Radio Watcher: 6.23.95

Newsgroup: rec.radio.broadcasting
Date: 1995-06-25 00:00:00 UTC
From: San Diego Radio Watcher <chris@terminus.wccs.saic.com>
Message-ID: <3sit0n$oat@vixen.cso.uiuc.edu>
Source record: 31116

Here's the latest from the 15th Market in the U.S.A.!!

Have Mercy! Wolfman Jack stopped by Don Imus' show on Thursday, and spoke about his new book, "Have Mercy." The star spoke about his early days at XERF, Mexico -- explaining the transmitter in to much detail for Imus -- and the mail order chickens [sent COD!] Plus, tidbits from Imus', Wolfman Jack, and Robert W. Morgan days at WNBC, New York.

The segement ended with the Guess Who's "Clap for the Wolfman," with Wolf adding more barbs in his segements. Imus is heard in southern California on KOGO [600]. Imus' book, "God's Other Son" is now in paperback. [and no, I won't put in Fred's number here!]

Flash: this just in! XHRM lackluster ratings, and constant comparasion to cross-nation rival, XETRA-FM [91X] has lead the station to revamp PD, and music. As previously reported this week, with Sherman Cohen leaving the Flash to KKOS, Carlsbad, as PD, Bryan Jones becomes the 92.5 PD. Jone's morning show shifts to the afternoon. As reported in the Escondido Times Advocate, he plans to bring the Flash to its original premise, a flashback to the rock of the 80s. It's hoped the the internal shuffeling will head the station to higher numbers.

The TA also reported that KKOS' move to 95.7 from 95.9 won't happen until September, but inside sources at the station tell me it should happen "either late July or August." Cohen is reported to have no plans to change the music format of the AAA station. Ron Lane becomes assistant PD, and Clark Novak remains as music director.

"I have a fat ass!" Not my saying, but Stepanie Miller. The comedian leaves KFI AM 640 tonight with a "going out of business" part at the Universal City "City Walk." [She must be the most surgically corrected upcoming talk show host ever: thigh reduction, perm. eyeliner, and eye surgery. All discussed on her show on KFI]. This week, a majority of her shows were flashbacks to previous bits during the last 18-months.

Coming Monday, Marlyn Kagan gets a two-hour earlier start at 7 p.m., followed by Mr. KFI at 9 to midnight. news:alt.fan.mr-kfi

In the latest trends: I missed one very important AM/FM combo: KSDO at 5.2, and the sister station KKBH at 3.4, for a combined 8.6. This was the best showing for the "The Beach" since the format change; and was helped not only by the tight format, but the dialy barrage of TV-ads. The last trends had KKBH at 2.8.

Noted in the TA too: Three "classic rock stations" might be too much: KGB slips to 3.2 [from 3.5], RockMix 103.7 [KMKX] has the first showing

at 2.5 in its present format, and KCBQ-FM with 2.0, down from 2.3.

HomeBoy page alert: I've revamped the San Diego Radio Log, and it's avail at: http://www.geopages.com/RodeoDrive/1102.html . Stop by, and relax.

The most common sorts of financing are those where you pay all of your money to the bank, then a year or so later the bank comes and locks your doors after reposessing all the equipment. I would say that the number one must to avoid is purchasing any radio station at all.

The currently inflated prices being paid for stations cannot last. The low profit margins on stations have destroyed the whole industry and the bankers are the only ones really benefitting. Certainly the station owners aren't in the long run, and the listeners surely aren't.

I heard, too, that the demo at NAB failed. Also, some of the equipment reps indicated that like any modem, it would "step down" to lower rates, and reduced fidelity. While no price tag has been hoisted, it is rumored to be in the 5K range each end. I find this to be quite a bit of cash, for something that is dependent on analog phone lines for data transfer, when you can buy ISDN Codecs with T/A's for under $5K each, with twice as much fidelity and flexibility. With ISDN becoming more readily availble, and the price dropping as well, ISDN seems to be the future, rather than this concept. I am curious at what heppens when you get a lot of garbage on the line in the middle of a broadcast. Unlike a fax or computer download, it is not really practical to "resend" the packet of a live event. Stick with ISDN.

The "Creative Director" at an ad agency has an entirely different job description than a "Creative Director" at a radio station...see my previous post.

But you're right about "Putney Swope"...it's the funniest movie ever made about the ad biz ("Ethereal Cereal"?), just like "Bad Lieutenant" is the funniest movie ever made about sports radio.

In Buffalo, I found the NHL network on WWWS, 1400 AM. Kenny Albert, son of Marv, does the play by play, and one time Washington Capitals coach and long-time broadcast commentator Gary Green is doing color.

DMX and other technologies yet to be developed to deliver music to our homes will never totally replace radio, as we now know it. Radio is local...has the potential to influence greatly what we do or think. DMX plays music with little or no talk...similar to what many know as Marketcasters or Muzak. DMX has a strong potential for the masses who want that kind of service or who can't find the music format they desire on commercial, non-commercial, or SCA radio. Example...in Atlanta there are no stations now playing Big Band or American Pop Standards, even though there is a large audience wanting that format. Some of these listeners have discovered that DMX can fill that void. Untill broadcasters in any given market can supply all the formats that the audience wants (which will never happen) then services such as DMX will survive, and perhaps survive well.

## 480. George Duncan obit

Newsgroup: rec.radio.broadcasting
Date: 1995-06-25 00:00:00 UTC
From: "Max Cacas - NPR News Ops - Wash. D.C." <MCACAS@npr.org>
Message-ID: <3sit0v$obg@vixen.cso.uiuc.edu>
Source record: 31124

I'm pretty sure there wasn't any mention of this in the back issues of AIRWAVES that were in my mail box while I was on vacation, so I'm gonna go ahead and post this for the benefit of the list.

Our colleague, Charlie Kaye from CBS Radio, reports over on CompuServe's BP Forum that George Duncan died the weekend before last (June 10th-11th) of an apparent heart attack while playing lacrosse at Cornell University. He was 63 years old.

Charlie recalled that George was one of those who helped expand the popularity of Album-Oriented Rock (AOR) radio in the late 60s-early 70s. Of note was his term as GM of the legendary WNEW-FM between '68 and '71, when he helped assemble such talents as Jonathan Schwartz, Scott Muni, Allison Steele, and Rosko. He also helped establish AOR formets at Metromedia stations in Phildaelphia (WMMR), Los Angeles (the old KMET), San Francisco and Cleveland (too many years in this business must be catching up with me...what were the calls of those stations? Anyone remember?)

Personally speaking, I remember a brief meeting with George Duncan when I worked at Metromedia's WASH-FM/Washington in my senior year of college. I remember being quite amazed that the VP for Radio for a big outfit like that would take the time to chat with me about my career, and otherwise inquire about my aspirations in this business. A real class act.

(Thanks to Charlie for permission to repost this information!)

> The real bottom line on success in radio is good programming, period,
> regardless of where it comes from. I look at the TV model as an example:
> Almost universal use. Very little "live." Very little local.

I would argue that radio is about marketing, and programming is (from a business point of view, not the listener's point of view) a means to an end, not the end itself. If stations can attract enough audience with automated or non-local programming to pull in advertising dollars, who am I to say they are wrong?

But more than half of all commercial stations in the country today lose money...

The fact that 'Lite 97' is successful in a particular place today does not mean that it is doing the best it can possibly do to satisfy the needs of either listeners or advertisers. It only means that no one is doing a better job today.

My previous post was based on my perception that both advertisers and listeners want personal attention. The broadcasters who do the best job of reaching out to each customer and each person in their audiences and making him/her feel special will be the winners in what is shaping up to be a Darwininan struggle for existence in our industry.

And I don't see robot-driven programming and big-business bureaucracy as making very many people feel special.

Hello All!

I currently returned from a very enjoyable vacation in South Florida, on Marco Island (16 miles South of Naples) to be exact. I flew in and out of Miami and heard some great radio stations in Miami, as well as a couple in Naples and Ft. Myers.

I am just wondering if there is anyone out there in Miami or Naples/Ft. Myers that might be willing to trade airchecks of radio there for stuff here in the Denver market, or I would be willing to send blank tapes and pay postage if anyone is interested.

Please send me a note to GZJR86A@prodigy.com or ab607@freenet.hsc.colorado.edu.

Thanks!

Chris Reed
Denver, Colorado

>FM filter right before the 5-way splitter.
>
This description of your setup raises some "important low points" that
didn't come out in your original posting.

To answer one question: yes, the FM transmitters can walk right through
a TV front end on the high-band VHF channels, even if the transmitter is
suppressing harmonics OK.

However, you need to consider the possibility that the splitter and five
devices you have on it may be your problem. Radios and television sets
are not passive devices---local oscillator radiation is a standard
problem with them, particularly with inexpensive home entertainment
stuff. Also, whatever cabling you have in that network of
interconnections may be contributing to problems.

The first thing you need to do is to disconnect all those TV's and
VCR's, and connect just one of them to the antenna. Turn everything else
off, and walk around and turn off any radios, phonos, CD players, etc.
Then take a look and see if you have an RFI problems.

I'd suggest that you discuss these problems in a group frequented by
EE's such as sci.electronics.repair. Telling me that you have five TV
front ends hooked up to the same antenna system raises, in my mind, a
good many questions about what else you have that might be causing
on-site RFI.

[Moderator's Note: Can we call a close to this thread now? To continue to post everyone's individual experiences with FM ducting and E-Skip seems redundant at this point. I appreciate everyone's inlut but it has to end sometime... Bill]

To add to several postings about FM DX reception...

Earlier this week, I attended the Public Radio Conference in Washington DC. I drove from Buffalo to Washington with my PD and GM, and on the way back to Buffalo on Wednesday afternoon (6/21), we were trying to find a station in central and northern Pennsylvania that would be broadcasting NPR's All Things Considered. We found one, and were astonished to hear that it was our own station from Buffalo, WBFO at 88.7 FM. We were well over 100 miles southeast of Buffalo at the time (Mansfield PA), and we were able to listen for quite a while. As we got closer to Buffalo, about an hour and a half later, we were maybe 40 miles south of Rochester when we heard All Things Considered...from Iowa! A further twist of the dial, and another ATC feed came through loud and clear...with weather and time checks for the Central and Mountain time zones from Nebraska Public Radio! Whether it was ducting or skip, or perhaps the result of WBFO's new omnidirectional antenna installed a week ago, I don't know, but it was fascinating to hear faraway FM signals. Weather conditions through central PA and western NY were hot (high 80s/low 90s) and somewhat humid.

>power supply inside the house.

Note that FCC Rule 73.318(b) specifically excludes station
responsibility for interference to high gain antennas or antenna booster
amplifiers.

>Where should I put the stub? Do I use a 3-way splitter and just hang it
>off one end? Do I put that splitter before the 5-way splitter? Can I just
>use one of the outputs of the 5-way? Should I put the stub outside, up
>near the antenna? How does this stub that sucks air affect the performance
>of my booster?

The problem is PROBABLY overload of the booster amplifier input,
so the trap should go between the antenna and the booster.

## 488. Whither Gene Burns, Larry Glick and Joey Reynolds?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-25 00:00:00 UTC
From: kriston@ibm.net
Message-ID: <3sit18$ocf@vixen.cso.uiuc.edu>
Source record: 31132

Perhaps someone can answer my questions about Gene Burns, Larry Glick and Joey Reynolds.

I used to listen to the syndicated Gene Burns, who was plopped in our drive-time slot when Larry King left. Mr. Burns was subsequently replaced by Jay Severon(sp) who reigns the drive-time slot in my area to this day. I hear Gene's had a heart attack. What's he doing now?

Many East Coast folks remember Larry Glick from WBZ-Boston in the evening, who was moved to a daytime slot amid hordes of protest from the night-time listeners to his strong signal. Where is he now?

And finally, around the time Howard Stern was kicked of 660 WNBC-New York in the mid-1980s, Joey Reynolds took his place. During his drive-time reign we heard Jane Dornacker's helicopter go into the river twice (the second time she wasn't so lucky -- she died and the pilot survived with serious injuries). Some time later, WNBC went off the air and Joey Reynolds has disappeared from any of the markets I've been exposed to in the Eastern US. Rumors were that he went to Florida?

Thanks in advance for any and all information,

Kris

The word on alt.fan.don-n-mike is that WYMJ is now under new management.
This news was acquired from D&M producer Diana Sliman. It is speculated
that WYMJ will undergo a change to the Oldies format.

Last year, Don and Mike did a remote broadcast from WIMX studios in order
to save the station from bankruptcy. We'll see if the boys decide to
service their affiliates like that again...

>
>Now that most TV stations are on 24 hours a day....just when the heck DO they
>give this info out anymore?

As to when IDs are to be given, it's at the beginning and end of
operation, and at the "top of the hour". It is not necessary for a
station to limit its operation to within one day, so they might have done
the "beginning of operation" ID five or ten years ago, and the "end of
operation" ID years from now. I do hope they are doing the hourly ID,
however.
I don't believe the contents of the of the ID have changed in
many years. The contents remain "Call letters immediately followed by
the community or communites specifed in its license as the station's
location: Provided, That the name of the licensee or the station's
frequency or channel number, or both, as stated on the station's license
may be inserted between the call letters and station location. No other
insertion is permissible." [see 73.1201(b)]
Other ID's are often included in a "sign on" or "sign off",
though it appears they are not required. For example, 74.582 deals with
the identification of aural STL or intercity relay stations. These have
the same ID requirement as broadcast stations (begin and end of
operation, and hourly). However, 74.582(a)(2) allows the associated
broadcast station's ID to be substituted (you don't have to use the call
letters of the STL).
74.1283 requires FM translator stations to ID using the
translator call letters. If they rely on the primary station to do the
ID aurally, it must be done thrice a day, 7am-9am, 12:55pm-1:05pm, and
4pm-6pm. Translators may also be identified (using their own call
letters) hourly using International Morse Code to FSK the carrier or AM
the carrier. Stations often list their translators during a sign on or
sign off. This appears unnecessary.
74.682 puts similar identification requirements on TV Auxiliary
stations (STL, remote pickup, etc.).
So... all the stuff identifying every microwave a station owns
(including the RadarRange in the break room), showing ships going through
waves, airplanes flying, the Star Spangled Banner, etc. seems to not be

legally required. I don't believe it ever was, but I haven't gone back through the Federal Register to check it out.
By the way... years ago I heard a recording called "The Signoff", or something like that. It was on an LP. It had a very official sounding sign off, followed by a pop, some silence, then Mexican music slowly fading up in the background. Sounded just like what I heard on the air monitor where I worked!

>Tom Hartnett
>Comrex
>

Here in Richmond, VA Bell Atlantic charges $100.00 to install and about $38.00 a month for an ISDN line with 2 B channels and a D. They then charge $.02 per minute per B Channel for use, plus any long distance charges. At those rates I have converted our DGS system to ISDN, have an ISDN line at the studio and each transmitter site for backup (We used to pay $400.00/month for ONE 15 khz Equalized line for backup to one site), I have converted an 8KHz line to ISDN for our "main studio" link, and we use it for remotes when ever possible.

Bell Atlantic has installed lines for me literally overnight in emergency cases. The event that spawned this was a failure of both main and backup STL transmitters and minimal success with another due to a damaged antenna. Bell Atlantic had two lines installed the next day and the station was back up to full speed. Thay have no minimum commitment here, either. From what I have heard, Bell Atlantic is a rarity with their aggressive commitment to ISDN. They are coming out with a residential service soon and I will be using it here for Net access.

>-=Scott Fybush-fybush@world.std.com=-

Which reminds me to post this question: how can stations in different markets share the same call? In addition to the WKLB AM/FM example, how about KCBS? AM is in San Francisco, while FM and TV are in LA. At least they are all owned by the same outfit.
One more query: I've noticed that a station's call letters are referred to in this group as "callS," as opposed to just "call." I can understand 'call letterS', as in, "Our call letters are WBZ," but would you ever hear, "Our calls are [is?] WBZ."? Is there any rationale behind this syntax?

I worked with Larry Kent at WNWS/Miami in the mid-80s when South Florida talk radio was at its best and worst. Those were some of my happiest days in radio, and Larry Kent was a funny guy and a good friend.

I last saw him in Los Angeles at KFI around 1992. We had dinner and told stories about the people we used to know. No one told a funnier story than Larry Kent.

Larry last spoke to me here in LA from Fort Myers where he was GM of WDCQ just a few months ago. I will miss him.

Source record: 31139

} From: af660@freenet.carleton.ca (Charles Hobbs)
}
}
} Since most stations (that I know of) that even bother to do news will
} have some local stories, I get the feeling that most discussion
} about "local programming on the radio" is really a desire to have
} more "garage bands" and such on the air. You know, "amateur night".

I don't believe that those who desire more localization in radio are interested in more local bands being played. I know there is a large number of those who do want that, but when the argument of local radio is raised, it usually doesn't center, as much, around whether the music is local, but rather whether the presentation is local and live.

It is a fairly intangible thing, really. It has to do with the station's perceived commitment to the audience. No one likes to be thought of as merely a piece of marketing data. Live, local stations give listeners the feeling like the station is somehow connected to the community. Like the station management gives a good g**damn about more than the cold bottom line.

Like the difference between a landlord who lives in the building (or at least in the area) and the slum lord who lives far away and does a bare minimum to keep tenants paying their rent. I know the bottom-liners will bitch and moan about how *radio is nothing but a business* ...but there are many ways to run a business. One is the Slum-lord approach which says that "...the less we have to put into the operation, the more profit we can make". And there is a lot of logic to the statements from a ledger standpoint. The other way is to actually give a heck and invest a little more in the business and thereby create a higher class operation.

Also, there is something to be said about keeping the local public informed. This requires a local presence. Here in Springfield Mo., there is a station called KTTS. They are a 100,000 watt country station which has remained #1 in the market forever *not* because of their outstanding mix of CC&W music, but because they have a total community commitment that includes extensive news and weather coverage, and a very local presence. Even those who dislike country music are glued to KTTS in the event of any threatening weather. KTTS maintains a 24 hour newsroom which is poised to respond in the event of any breaking news. They are the ONLY station in the region to do that.

It is in these 'more or less intangible' ways that local radio serves its purpose and it is in these ways that communities suffer when

stations pull the plug on local service and go totally automated or satellite.

So there is more than the bottom line to consider when looking at whether to automate or go satellite. I still am one who believes (even in the face of all the de-regulation and consolidation) that broadcasters *do* have an obligation to serve their community. Those broadcasters who agree with that, and offer more service and local presence, do much better than a similarly programmed satellite or automated outlet, as a rule.

I certainly hope that in the face of all this *bottom-line-ism* that is infecting the great medium of radio, that more will see and appreciate the value of *full-service* radio and realize that while others jump on the fad-wagon, it is the WGN's, WBZ's WCCO's and KTTS's that will hold on to a strong and loyal audience who appreciate the service they are getting.

Message-ID: <3sit87$osc@vixen.cso.uiuc.edu>
Source record: 31146

IM>Westwood One's Tom Leykis is originating his shows Tuesday (6/20) and
IM>Wednesday(6/21) from Phoenix
IM>affiliate KHOT(100.3). Leykis was PD and afternoon drive in
IM>the mid-80's at KFYI(910), leaving here for KFI, Los Angeles and then WRKO,
IM>Boston.

This is interesting. Normally such a thing happens when the station has threatened to cancel the show. It's a last ditch effort to get them to stay. Frankly, what's far more interesting is the fact that Paul Harvwy visits Phoenix regularly (he has a home there). Are there regular reports when Paul originates from KTAR or his home studio?

Even more important is whether or not a talk jock's visit to a city has any impact on the city. My bet is that Phoenix will ignore him in person just the same as they do on the radio.

The same as they do any visiting jock. Will his network audience find the Phoenix visit of any interest to them? Will the show take on a lot of inside rivalry that'll be irrelevant to anyone not aware of the history?
Or, it it just another opportunity to get his name in pixels?

Rich

Source record: 31058

Can't blame Clarke for sticking up for his down-the-hall colleagues...in his position I'd do just the same thing. But WHTK is like hundreds of other AMs in large markets across the nation who are now struggling to serve their expanding metros. In a way, it's a very good case study of what's happening to the entire AM band in the US.

It has a definite signal problem, not just because of the power and the number of towers used to generate the night pattern, but the way the towers are configured and phased to just about kill the signal on the east-west axis and shoot nearly ALL the power north-south. (I've seen six-tower patterns from stations like CHUM in Toronto that were downright loose, not all that far from non-directional, so the complexity of the array doesn't necessarily mean a super-restrictive pattern.)

We have a real problem to the west-southwest ourselves, as do almost all the Rochester AMs. (We no longer pull in our signal dramatically to the east and southeast at night, because of an extensive antenna reconfiguration in 1990-91.) It's all because of other stations jammed onto the band in the years from 1945 to 1970, and again during the deregulation area of the 80s.

The trouble for each individual station comes when it's the middle of morning drive in late fall, winter and early spring, the sun hasn't quite come up yet, and you can't cover the growth areas of your metro---in this case, the eastern and southeastern suburbs where a lot of the population in the Rochester metro now lives, and a majority of the growth in the market is now occurring. (The same problem repeats itself in late afternoon when you can lose the signal in the middle of the drive home.) WHTK has a severe problem in that direction because it has to protect WADO in New York, which has just received a CP to go to 50,000 watts DA-2. That's going to get worse rather than better. There IS room for them to spread their pattern out to the northeast (where CJMS in Montreal went dark a few months ago)...not much opportunity for growth elsewhere, unfortunately.

This is an example of a big problem a lot of Class B (formerly Class III) AM stations are facing in markets all over the country. They were established either before or slightly after World War II, in markets where, at the time, most of the population of a market could be reached with a tight pattern concentrating a strong signal in the central cities and near suburbs. Now the population has spread out beyond the pattern...and with the growing congestion on the AM band, many stations are literally crippled in their ability to serve their markets.

You could argue that the AM band is so overpopulated now, that something will have to be done to REDUCE the number of stations on the band to make the situation better for those that might be strong enough to survive. IMHO, a combination of minimum requirements for news & public affairs programming, and a minimum daily local origination requirement, will clear out all the stations taking up space with endless relays of the same satellite service, or the same taped infomercials and religious programs...and leave the bands to everyone who's interested in actually serving his city of license and surrounding metro area. Without that, anything they do to improve their programming, or increase promotional effort (beyond the saturation TV schedule they are already running) can only accomplish a limited amount.
This isn't a knock on WHTK in any way, just a comment on how the plight of WHTK is an example of the troubles that once-strong AM stations are now facing across the US. It was happening to us as well, until we spent about 50 grand to reconfigure our antenna...and we were lucky, not very many stations even have room to maneuver in that regard any more.
Of course, idiocy like putting a 50,000 watt station on a regional channel just 300 air miles from several other co-channel stations has also got to stop...

Keep in mind that a digital radio station, coupled with effective Internet promotion, can become a "national" outlet overnight. The term "local", when applied to radio, has become meaningless. Whitney Houston, Howard Stern, Phil Collins and Rush Limbaugh sound the same wherever they are. The only "local" input of any importance is traffic, weather and news.

IG>My company sells DMX service to commercial establishments in Western MA
IG>and Rhode Island. It's a great deal to business since it's only a couple
IG>of bucks more than Muzak with 10x the selection and pays ASCAP for you,
IG>YET I don't see the comsumer side spending the $$$.

IG>So as radio folks what do you think? Will this kind of service have any
IG>effect on FM? I personally like high profile jocks on the radio and will
IG>listen to a station at times more to hear the personality then the song.

Gary,
Everything competes with us. A potential listener walking in the
park without a Walkman competes with us.

I doubt listeners will be willing to pay for a service that ties
them to a cable. If this were a reliable DBS service that allowed the
same freedom of movement that terrestrial radio does (and were free) I'd
have more concern.

As far as its programming is concerned, I see it as being very much
like the "Lite" FM stations that dot the map. They're generally very
successful and illustrate what most research will tell you: "shut up and
play the music."

With the exception of "high profile" morning personalities,
listeners don't seem to pay much attention to who the jocks are. It's
very frustrating for a broadcaster to constantly be faced with the fact
that radio is our life. To listeners, radio is just a small part of
their day; that "top of mind awareness" is very difficult to generate.

When we audit focus groups or visit Arbitron in Laurel, MD, we find
that listeners have no idea what our slogans are, who our personalities
are or what time they're on the air. Talk Radio is slightly different
only because the personalities ARE the programming rather than window
dressing around it. Still, listeners don't pay the same kind of
attention to us as we do.

The real issue of DMX is the price and the lack of mobility. With FM
stations running very little news and public affairs and formats
fractionalized, the "local" angle is less important. "Lite FM," "Mix
10X.X," "Arrow 123.4" and "Power Pig 98" aren't very local. If a
listener wants news and information in New York they can listen to WOR,
WINS, WCBS or WBBR. They've also got "New York 1," two versions of CNN,
CNBC, America's Talking, Newstalk TV, etc. on cable. No need to rely on
"Lite FM" for news.

The biggest advantage of DMX is it's fidelity. Unfortunately, that's
the least important aspect to a listener. When high rated stations are

the ones who mash their audio the most, I have a hard time expecting them to flock to high fidelity cable radio. The reaction I hear from cable music listeners is that they like the lack of talk and no commercials. Not a good prognosis for Disk Jockeys.

Rich

Yeah but again guys...this is a BUSINESS and four talk stations in one market may have meant that no
one station could make an adequate rate of return for its invested capital.

We don't run radio stations for your benefit. We run them to make money and to the extent that you
are happy, that's great, but unless you are willing to put your money where your typing fingers are, you
are irrelevant to the process

I guess Fred finally nailed it on the head here.

It is this attitude that is, essentially, ruining radio in the USA. The attitude, so well stated by Fred, is the "We don't care, We don't have to" attitude that has turned radio from a profitable 'public servant' to what it is today... and to what it is rushing (no pun) at break-neck speed to become tomorrow.

As Fred has articulated, radio no longer gives a good g.d. about the listeners, their needs or desires. It matters not as long as people with Fred's perspective can wring a few more bucks out of the market, can cut a few more cost-corners and can manage to attract enough cattle to sell to the slaughterhouse.

As I said in a previous article, it is the slumlord attitude that says that "We don't run our building for the tenants benefit"... How nice. Sadly, people with this attitude truly could not care less about those the presumably serve, because they are serving only two masters, the almighty dollar and themselves.

Soon, the doors are going to be flung wide open and those with Fred's stated opinion are going to have open season on what is left of radio (and TV) broadcasting in America. Since the seventies, regulations designed to keep broadcasters honest (and profitable) have been subverted, watered down and virtually eliminated. Now with the new telecommunications bill (already passed in the senate) the few skeletal remains of those regulations will be gone.

How comforting to know that those with Fred's stated opinions (that we don't run radio stations for [the listener's] benefit) are going to be set loose in the market to buy up as much valuable, scarce broadcast space as they possibly can, and run it in a similar way as Fred has told us he believes in running his stations.

How pleasing it is to realize that the great medium of radio is in the hands of those who could not care less about the listener (whom they supposedly serve). How great it is to finally see in print what has been evident for years now... that listeners are "irrelevant" to the

process. Thanks Fred for being truthful where others remain hidden.

I would venture to say that if Fred could turn a profit without those pesky, irrelevant listeners, he would gladly do so.

Please note that I am taking objection with Fred's stated positions, not with him personally. I don't know Fred personally, so I cannot judge him. But his stated opinions are, IMHO are at the core of the ruination of American radio.

I am not opposed to stations making a profit. That is their right. But there is more at stake her than profit, and there is more ways than one to make that profit. Fred's way seems to be a slash-and-burn, who cares approach which will bring high profit for him in the short-run, but will leave in its wake, a devastated broadcasting structure that may never recover.

Have at it, Fred. The world sure seems to be turning in your favor now. I just hope that there are enough others who choose a different, more concerned approach to the situation.

Gene Burns left WOR and the network over a dispute, the details
of which I'm not sure of. Various accounts differ considerably---maybe
Rich Wood of the WOR network, who lurks in this newsgroup, can en-
lighten us. Anyway, after a brief sojurn in Florida, he went out to San
Francisco to become weekender and swing shift talker at ABC's
San Francisco O&O, KGO-AM. That's clearly a holding action until
they either have an opening they can plug him into, or fit him in some-
where else in the CapCities/ABC system. But reports from Boston in-
dicate Burns (who recently was treated for a mild heart attack) was
spotted back east, the scene of his big successes on WRKO in the
1980s, not to come back to RKO but to discuss being part of a rumored
new FM talk operation. (WRKO is the only issue talker left in Boston
and there is clearly room for new competition.)
Larry Glick retired a few years back after doing afternoons first at
WBZ and later at WHDH-AM (now sports-format WEEI). He's been
asked repeatedly to make either a short-term or permanent comeback
and so far he's resisted all offers. But people in Boston report he's re-
cently paid a visit to that same FM where Burns was seen...so the
rumors are flying that he may come out of retirement and come back
to Boston.
A mutual friend tells me Joey Reynolds is taking it easy right now
in Florida...he put in a few years at a West Palm Beach talker after
moving himself and his family down there, but he's in pretty good fin-
ancial shape and doesn't do anything full time in radio these days, just
occasional free-lancing and spending a lot of time with his kids. There
are a lot of us who remember him from his days at WKBW in Buffalo,
who miss his anarchic wit and wish he'd make a full fledged comeback.
I've heard he'd like to do it if the opportunity's right, and he's long
since
shed some of his old rebel ways and become a team player, so maybe
we'll hear from him again soon.
I think the most fun you could have in radio is to be part of a
lineup
that also includes these guys...each very different but very provocative.
If you're also part of that lineup they're sure to bring out the best in
you.
I'd love to be the PD who puts them together on the same major market
station and turns them loose...

Here in Binghamton, the morning guy on WNBF 1290 quit one station and started up a confused and rushed, syndicated show called "World Radio Weekend". The large number of live reads for local companies during this show is astounding, considering this is a syndicated show on the "Global Radio Network".

Just how much national penetration does this show have? Has anyone heard it outside of Binghamton?

Thanks,

Kris

# 517. Re: Phoenix Radiowatchers 6/20/95

Source record: 31067

Rich...

You know better than that.

We at the network did not "announce" my arrival at KHOT. The station did. We were asked to come to Phoenix and host a listener party at a local venue. We did it and we drew a substantial crowd.

We've done our show from over 20 cities. Only one of those (WWL/New Orleans) has cancelled the show.

Soon we will be doing our third set of shows from Seattle. Think we're about to be cancelled there? Check the ratings.

We've been to Sacramento twice. In little over a year, adults 25-54 has gone from 1.0-4.9 in afternoon drive. We will go again when we are asked.

We went to Madison, WI last November. Think our numbers are lousy there? We're still on at WTSO. Is Jay Severin?

When we went to Las Vegas, our affiliate had been carrying us for as little as one hour a day. Since our trip, we are now on all four hours.

When we went to Palm Springs, our affiliate generated substantial revenue from a remote appearance we made.

Fact is, we go to markets where stations request our appearance. We don't beg stations to bring us to town. It works for them. It works for us.

Maybe the reason your shows don't do it is because your company won't (or can't) spend the money. If that's the case, why cast aspersions on OUR show?

Or, perhaps the next time the Dolans go on the road, we will know that another station is about to cancel the show. Was that the case in Boston, Rich? And, speaking of being ignored, Rich, have you seen the nighttime numbers at WGY since the Dolans were cancelled and we went on at night? WGY isn't being ignored at night anymore! Maybe the Dolans should have paid them a visit!

By the way, your company owns a station in Bakersfield. They asked us to come. We did. We drew a very large crowd for an advertiser. We got TV and newspaper coverage for the station. And, we're still on the air. Are you going to say that we BEGGED the station to let us come, Rich?

You know better than that.

Tom Leykis

Leykis (Westwood 1) has been travelling around the US on and off since the beginning of the year. Despite our suspicions, he still tells his audience that his ratings are killing the competition in most towns after a "gestation" period of three to six months.

Of course he'd tell us that.

One show that is losing BIG in our town (Binghamton, NY) is the David Brenner show (also WW1). The other show losing BIG is Tom Leykis. It's easy to tell. There are *no* local commercials during either of these shows, whereas during Imus, Rush, the Sports Babe, the sports talk shows (ESPN and Sports Byline) and G. Gordon Liddy the local spots are filled (well, there aren't five Sears and two Gold Bond commercials during each break during these shows like there are during Brenner and Leykis!).

I hope this new talk station survives despite the disheartening lack of local spots.

Sounds like change is afoot at WUFX (103.3), recently purchased along with 97 Rock by Charlie Banta's group....
This weekend (June 24-25) they were using liners calling themselves "The Edge" (certain to confuse folks who also listen to Toronto's CFNY) and playing a much more new rock/alternative-oriented music mix. Of course, CFNY and Fort Erie/Buffalo's "The Planet" 101.1 FM are already doing the same thing, and Rochester's alternative "The Nerve 95.1/95.5" overlaps the eastern portion of the station's coverage area. So, if this is really a permanent shift, that's pretty crowded territory for that format, don't you think?
Meanwhile, Keymarket/River City is advertising in the trades for a new sales management team for its stations in Buffalo, which include WBEN, WWKB, "Q-102" and "Kiss 98.5." 'BEN and Kiss are winners in the Arbitrons, and Q-102 has been enjoying an upturn in its fortunes lately as well...maybe new blood is expected to turn the good numbers into new $$$$? (Now if only they can think of something worthwhile to do with that wasted 50,000 watt signal on 1520...)

Reply-To: rnolan1087@aol.com (RNolan1087)

The 6/24 Boston Globe carried a story that WZLX (Infinity Broadcasting) had fired morning man Shelton. He had been with Infinity's other Boston station WBCN for many years before shifting to ZLX a couple of years ago.

Shelton was apparently seeking a substantial raise that would reflect his value to Infinity in the market.

Speculation is that Infinity would like to air it's Howard Stern in the ZLX morning slot. Stern is currently heard on BCN via tape delay in the evening.

Sounds like a bad PR and programming move. Shelton is, for many reasons, a
Boston intsitution and deserves a little better.

I am a student at the University of Arkansas in Fayetteville. Myself and some other folks formed a group in the hopes of starting up a campus radio station. Since last year we have raised a respectable amount of funds, and the University has given us a bit as well.

The problem is that we dont really know exactly what to do with the cash now that we have it. We arent sure what our exact options are. We need to know whether to pursue an AM or FM license, how to get an FCC license, and what equipment would be best for our purposes once we obtain a license.

as far as equipment goes now, we have an old 20 watt AM carrier current transmitter from Radio Systems, and we have a sound board and CD players and thousands of CDs. The main concerns now are licensing and buying a respectable antenna.

there are a lot more details, but there is no need for me to go into them now. If anyone has any suggestions at all, where to start, who to talk to, i mean anything i would be in your debt if you would email me.

thank you,

Dave Hein

> Everything competes with us. A potential listener walking in the
> park without a Walkman competes with us.

That's the position I take when defining our service [Music Choice - formerly know as Digital Cable Radio]. We are not radio but just another form of audio entertainment such as tapes, CDs and yes, radio. We're competing for your [the listener's] time but can't provide the localism and information that radio does. From my days in "real radio", I still remember the spiel about how important commercials are in order to learn about new products, stores and sales! :-)

> I doubt listeners will be willing to pay for a service that ties
> them to a cable.

We have around 200k cable subs and growing. The majority of our listeners now come from the DIRECTV DSS feed where we're getting good response to our program material. As we become more of a basic service and less of a premium on cable, we hope to really grow the number of households that we are in.

> The biggest advantage of DMX is it's fidelity.

Actually, I'd have to think that VARIETY ends up being one of the biggest advantages. Music Choice plays a lot of full-time formats that you're just not going to get on conventional radio, let alone in one market.

> Unfortunately, that's the least important aspect to a listener. [audio fidelity]
>When high rated stations are the ones who mash their audio the most, I have a hard
> time expecting them to flock to high fidelity cable radio.

It's unfortunate that we have conditioned people to set low expectations for musical audio quality because of the prevalence of processing. It also amazes me at how poor some of the CDs that are mastered today sound. It's like the old saying, "garbage in, garbage out". Interestingly, we have received some complaints because our dynamic range was so good that some listeners cranked up their stereos during soft passages in classical programming, only to get "blown out" when the horns and tympani came in!

Cable audio services like Music Choice won't replace radio. If anything, we'll supplement it. CDs actually drove cassette sales higher. Perhaps we'll end up sensitizing people to audio media [as opposed to video] to the benefit of the _whole_ catagory.

I'm not sure that the majority of listeners really want "no talk"
radio. When I was a college student at Washington State University,
in the early '80s, one of the stations I listened to was automated
Top 40 from TM Productions, KHQ-FM "Stereo 98". The only talk on this
station, most of the day, was station IDs and music back announcing
("That's Barbara Streisand with Woman In Love; before that, you heard
Kansas, with Hold On"--I'm sure many of you remember these stations).
Commercials usually ran 10-12 minutes an hour, clustered in four breaks.
And sound quality was excellent for the time, with very low compression.
And, as long as it had no other FM competition, it did quite well.
But, when somebody brought a live, local Top 40 (92.9 KZZU) into the
market, KHQ-FM's ratings plummeted, and the station soon changed formats.
I don't think that this is atypical; listeners seem to flock to the
stations with the DJ presence, because they do like the feeling that
there is SOMEBODY at the station. And I would have to think that DMX
would sound a lot like the old KHQ-FM did. And just as KHQ-FM was
vulnerable to competition due to its lack of a "human" feel, I suspect
that DMX will be over the long run, too.
Mind you, this assumes that local radio does it right--I remember
another automated Top 40 station (KDSQ Denison/Sherman, TX), that dumped
the SAME automated format that KHQ had carried, in favor of the SMN
"The Heat" Top 40 format, and the station just died...the audience and
advertisers hated the new programming (myself included). Why? Cheesy
screaming DJs and a very teen oriented music selection didn't cut it in
this market.
The lesson here is that over the air radio can continue to do OK
against a DMX style "jukebox" service, but only if you program your
station well. But if you put whatever crap you can obtain cheaply from
a satellite service on the air, then I don't think it will be much of
a loss when DMX kills your station...

Tom Desmond

Re: DMX

I have had the DMX service for the past year and like it. I listen to primarily the Hottest Hits (Pop/CHR) (Ch 24). Here in Seattle, there is not a true Top 40 station - but rather a rhythmic/CHR station and a Hot A/C station. The DMX station uses the R & R Top 50 CHR as the base for their playlist. There are a number of songs that DMX plays that are not easily found on the radio. Also, I have the DMX remote that shows the name, title, chart position, album and label for each song. It's much easier to find out who did a song on DMX then to wait for the DJ to maybe announce the title and artist. And if I want to listen to any of the other 29 DMX stations, I can always find out what is playing any time during the song.

DMX won't replace radio (I still listen during the commute hours and during work) but for someone who likes to listen to music a lot, it is a great addition.

Gregg.

>Will FM radio as we know it ever be replaced our even threatened by
>Digital Music Express (DMX) or other similar digital satellite services?

Having lived in several markets where digital cable radio was available, I'd say based on my experiecne, "no." There are three reasons:

1. What's been provided so far is sterile. Music, music, music. People like disc jockeys. If they didn't there wouldn't be so many employed. Look at satellite stations (oldies formats, especially). Have you ever seen a satellite station reach #1 in a competitive market?

2. People buy radios based on price. Sure, there are many audiophiles out there, but radio is a mass medium. To advertisers, it doesn't matter if the person is listening on a $9.00 walkman, or a $2,000.00 AMax receiver. The product is the same as far as they're concerned. And that's where you'll have a problem. Radio's big advantage is that it's cheap and portable. People aren't going to listen to cable radio at a beach, or park, or in their car, or at work, or in the library, or on the boat, or walking down the street, or while building a house, or hiking, or skiing, or while bicycling (though this is illegal in some states), or while sitting in the bathtub. Think about all the radios out there with handles. There's a reason for that.

3. Again, it goes back to the audophiles. Those people who spend a boatload of money on their listening gear WILL sit in the living room and listen to music. They may even have a cable tap nearby so they can hook up to the cable and listen to the music. But how many of your radios have external antenna jacks? I own 9 radios from walkmen to a rack system. Only one has an external antenna jack and that's because it picks up longwave and shortwave transmissions in addition to AM (medium wave) and FM. The slogan is true: "On the air-- everywhere." That's radio's advantage. One day go about your normal routine and notice how many radios you pass. On a weekend, I pass dozens.

Yeah but again guys...this is a BUSINESS and four talk stations in one market may have meant that no
one station could make an adequate rate of return for its invested capital.

We don't run radio stations for your benefit. We run them to make money and to the extent that you
are happy, that's great, but unless you are willing to put your money where your typing fingers are, you
are irrelevant to the process

I guess Fred finally nailed it on the head here.

It is this attitude that is, essentially, ruining radio in the USA. The attitude, so well stated by Fred, is the "We don't care, We don't have to" attitude that has turned radio from a profitable 'public servant' to what it is today... and to what it is rushing (no pun) at break-neck speed to become tomorrow.

As Fred has articulated, radio no longer gives a good g.d. about the listeners, their needs or desires. It matters not as long as people with Fred's perspective can wring a few more bucks out of the market, can cut a few more cost-corners and can manage to attract enough cattle to sell to the slaughterhouse.

As I said in a previous article, it is the slumlord attitude that says that "We don't run our building for the tenants benefit"... How nice. Sadly, people with this attitude truly could not care less about those the presumably serve, because they are serving only two masters, the almighty dollar and themselves.

Soon, the doors are going to be flung wide open and those with Fred's stated opinion are going to have open season on what is left of radio (and TV) broadcasting in America. Since the seventies, regulations designed to keep broadcasters honest (and profitable) have been subverted, watered down and virtually eliminated. Now with the new telecommunications bill (already passed in the senate) the few skeletal remains of those regulations will be gone.

How comforting to know that those with Fred's stated opinions (that we don't run radio stations for [the listener's] benefit) are going to be set loose in the market to buy up as much valuable, scarce broadcast space as they possibly can, and run it in a similar way as Fred has told us he believes in running his stations.

How pleasing it is to realize that the great medium of radio is in the hands of those who could not care less about the listener (whom they supposedly serve). How great it is to finally see in print what has been evident for years now... that listeners are "irrelevant" to the

process. Thanks Fred for being truthful where others remain hidden.

I would venture to say that if Fred could turn a profit without those pesky, irrelevant listeners, he would gladly do so.

Please note that I am taking objection with Fred's stated positions, not with him personally. I don't know Fred personally, so I cannot judge him. But his stated opinions are, IMHO are at the core of the ruination of American radio.

I am not opposed to stations making a profit. That is their right. But there is more at stake her than profit, and there is more ways than one to make that profit. Fred's way seems to be a slash-and-burn, who cares approach which will bring high profit for him in the short-run, but will leave in its wake, a devastated broadcasting structure that may never recover.

Have at it, Fred. The world sure seems to be turning in your favor now. I just hope that there are enough others who choose a different, more concerned approach to the situation.

IU>I would argue that radio is about marketing, and programming is (from a
IU>business point of view, not the listener's point of view) a means to an
IU>end, not the end itself. If stations can attract enough audience with
IU>automated or non-local programming to pull in advertising dollars, who am
IU>I to say they are wrong?

Rob,
It wouldn't do any good, anyway. If the cash flows, that's all the
business point of view cares about. It doesn't do much good to have a
station that serves listeners and goes bankrupt for lack of advertiser
support.

IU>But more than half of all commercial stations in the country today lose
IU>money...

IU>The fact that 'Lite 97' is successful in a particular place today does not
IU>mean that it is doing the best it can possibly do to satisfy the needs of
IU>either listeners or advertisers. It only means that no one is doing a
IU>better job today.

IU>My previous post was based on my perception that both advertisers and
IU>listeners want personal attention. The broadcasters who do the best job
IU>of reaching out to each customer and each person in their audiences and
IU>making him/her feel special will be the winners in what is shaping up to
IU>be a Darwininan struggle for existence in our industry.

IU>And I don't see robot-driven programming and big-business bureaucracy as
IU>making very many people feel special.

The FCC deadline for modifying your EBS gear to receive the new short attention signal is now less than a week away. Your decoder must de-mute on receipt of a tone in a 3-4 second window after July 1. Also after that date, you may begin transmitting a shortened tone. The new encode tone window is 8-24 seconds. Most will want to stay as close to 8 as possible, but there is no requirement to do this.

If you've let this go for the last possible minute (and you're not alone), take heart! The FCC "repair" window is 60 days...that means you have 60 days from the date you remove your EBS gear to the date you must have it working again. So, if you take it out today and send it to a mod service (ours, for example) you'll have until August 25th to get it back and working. But, technically, if you wait until after July 1 to send it to us, you'll have operated with it unmodified...not a legal thing to do. So, this is the week to take care of it. But don't wait any longer. Those of us offering mod service are likely to be swamped.. <8-O

Source record: 31009

Gene Burns left WOR and the network over a dispute, the details
of which I'm not sure of. Various accounts differ considerably---maybe
Rich Wood of the WOR network, who lurks in this newsgroup, can en-
lighten us. Anyway, after a brief sojurn in Florida, he went out to San
Francisco to become weekender and swing shift talker at ABC's
San Francisco O&O, KGO-AM. That's clearly a holding action until
they either have an opening they can plug him into, or fit him in some-
where else in the CapCities/ABC system. But reports from Boston in-
dicate Burns (who recently was treated for a mild heart attack) was
spotted back east, the scene of his big successes on WRKO in the
1980s, not to come back to RKO but to discuss being part of a rumored
new FM talk operation. (WRKO is the only issue talker left in Boston
and there is clearly room for new competition.)
Larry Glick retired a few years back after doing afternoons first at
WBZ and later at WHDH-AM (now sports-format WEEI). He's been
asked repeatedly to make either a short-term or permanent comeback
and so far he's resisted all offers. But people in Boston report he's re-
cently paid a visit to that same FM where Burns was seen...so the
rumors are flying that he may come out of retirement and come back
to Boston.
A mutual friend tells me Joey Reynolds is taking it easy right now
in Florida...he put in a few years at a West Palm Beach talker after
moving himself and his family down there, but he's in pretty good fin-
ancial shape and doesn't do anything full time in radio these days, just
occasional free-lancing and spending a lot of time with his kids. There
are a lot of us who remember him from his days at WKBW in Buffalo,
who miss his anarchic wit and wish he'd make a full fledged comeback.
I've heard he'd like to do it if the opportunity's right, and he's long
since
shed some of his old rebel ways and become a team player, so maybe
we'll hear from him again soon.
I think the most fun you could have in radio is to be part of a
lineup
that also includes these guys...each very different but very provocative.
If you're also part of that lineup they're sure to bring out the best in
you.
I'd love to be the PD who puts them together on the same major market
station and turns them loose...

Bob Smith, middays WXXI-AM 1370 Rochester NY

To all of you out there with web access--

If you're interested in music on the internet, check out my latest web creation:

The Library of Musical Links
http://www-scf.usc.edu/~jrush/music/index.html

Basically it's a list of links to various sources of information about music. There's links to hundreds of web sites, close to two hundred newsgroups, and one hundred-fifty mailing lists as well as FTP and gopher sites. Check it out if you're interested and let me know what you think. This page is Netscape specific, so you'll need to use Netscape 1.1 to view it properly, but I assume we're all using that anyway. I spent a major chunk of my time this weekend working on this, and I think that it will become a popular site on the web. I did everything for this myself including web surfing to gather all of the sites, HTML authoring, and graphic design. There's even cool imagemaps! Have fun and happy surfing!

Jason Rush

> The format would play at least two consecutive songs by the same artist,

> mixing current hits with old favorites. Artists in their sample music hour are:
> the Beatles, R. E. M., the Eagles, Robert Palmer, the Doobie Brothers and the
> Beach Boys. Will this take off? Time will tell.

Interestingly, there was an article in the AC section of the 5/12/95 R&R where Rob Edwards was doing something similar at CD-103.1 in LA. (KACD/Santa
Monica & KBCD/Newport Beach). Instead of doing one artist in each set, they're focusing on eras ('70s, '80s, '90s).

As far as the artist set idea goes, that's essentially our Twofer Tuesday
- all pairs all day, and it's very well received. Would it work all week? Probably. People are used to hearing more than one song per artist at home:
CD sales prove this. The big problem: how do you expose new artists? You could never play someone's first hit until their second hit is out! Then they're both new to your most loyal audience, and that's dangerous - two unfamiliar songs in a row? Obviously, not a 'leading edge' format.

IT>Or, perhaps the next time the Dolans go on the road, we will know that
IT>another station is about to cancel the show. Was that the case in Boston,
IT>Rich? And, speaking of being ignored, Rich, have you seen the nighttime
IT>numbers at WGY since the Dolans were cancelled and we went on at night?
IT>WGY isn't being ignored at night anymore! Maybe the Dolans should have
IT>paid them a visit!

Tom,
I know only that The Dolans make us a LOT of money. They'll also make their new Boston affiliate a lot of money. They'll also make their new Albany station a lot of money. They'll make their new Providence station a lot of money. I can deal with that.

What you failed to mention was that WGY moved The Dolans to various time periods, never giving them enough time to work. They moved the show >from overnights to early evening to overnights. Gil Gross was there and now you have the honor. Program du jour. It changes with Program Directors.

Tom, you also know that a single book isn't enough to credit any show as being the cause. I'll wait until there are five books under the station's belt before pronouncing it a success.

You know better than that.

I've always admired your ability in self promotion and I'll take many of the comments in that light. It's just that, in dealing with affiliates and advertisers, one has to be a bit more precise.

Rich

Leykis (Westwood 1) has been travelling around the US on and off since the beginning of the year. Despite our suspicions, he still tells his audience that his ratings are killing the competition in most towns after a "gestation" period of three to six months.

Of course he'd tell us that.

One show that is losing BIG in our town (Binghamton, NY) is the David Brenner show (also WW1). The other show losing BIG is Tom Leykis. It's easy to tell. There are *no* local commercials during either of these shows, whereas during Imus, Rush, the Sports Babe, the sports talk shows (ESPN and Sports Byline) and G. Gordon Liddy the local spots are filled (well, there aren't five Sears and two Gold Bond commercials during each break during these shows like there are during Brenner and Leykis!).

I hope this new talk station survives despite the disheartening lack of local spots.

Kris

>really here or not? (and if so, WHERE?!?!?!)
>

You're right... the regs are NOT at the FCC. They have an html
file called something like regs.html that says they don't have them.
However, the US House of Representatives has the regs (the Code
of Federal Regulations) at http://www.pls.com:8001/his/cfr.html
This is the entire CFR, not just title 47 (the FCC stuff). It is
searchable. It comes up with some pretty strange matches. If you do an
exact phrase, and enclose it in single quotes, it'll find what you want.
You can also find the US Code (the Communications Acto of 1934
and more) at http://www.pls.com:8001/his/usc.html
All the interesting stuff I find i put in my bookmark file at
http://slonet.org/~hhallika/ You're welcome to look around!

More Roskilde information at
http://www.sjoki.uta.fi/~latvis/huvit/festival/roskilde.html

ROSKILDE NEWSLETTER No. 11/95

NEWSLETTER No. 11/95

June 26, 1995

THE ROSKILDE STATION IS READY at several
frequencies

- the Festival will Improve its Service

Roskilde Festival will have its own radio station - and the audience in encouraged to bring their small FM pocket radios and their ear plugs.

In cooperation with RADIO ROSKILDE the festival has built up a radio station at the festival site. The station will be transmitting day and night from Monday (June 26th) to Monday (July 3rd). In the Roskilde region you can catch the festival station at FM 97.8 - as well as at Radio Roskilde's other frequencies (104.1 MHz, 105.7 MHz and 107.7 MHz).

The festival station is primarily intended for the audience when there is no music from the stages. It does also provide the possibility, however, that all those who did not manage to get a ticket can keep up with life at Roskilde Festival.

The traffic situation in the Roskilde region will also be followed closely. "So remember to turn on you car radio when you drive in the area", say editor Carsten Sivertsen from Radio Roskilde. Further details can be obtained by phone no. + 45-4235 8500.

The other station is ready too. The one with railway service. From Roskilde comes an urgent request: TAKE THE TRAIN -and save chaos on the roads.

And please note -again- that the festival is totally sold out and that NO TICKETS will be sold at the entrances. The organizers urge the audience not to buy tickets from people "in the street".

The festival's camping site opens on Tuesday, June 27th at 08.00. The actual festival site opens on Thursday, June 29th at 17.00. Up to this hour the traffic is expected to be extremely heavy. The audience is therefore urged to make for Roskilde several hours in advance of desired arrival time.

Couldnt agree with you more. WFLA in Tampa recently cut loose an excelent afternoon moderate in favor of another cookie cutter conservative as to not offend their increasingly old and conservative listenership. Does anybody in the country in programing, besides the folks at WSUN in Tampa and WIOD in Miami (both Cox stations) believe in putting on the air what is good, rather than what might offend some folks. Its nuts. Anyone who would be offended isnt going to tune out. They are going to hang on every word.

I just read a post by Tom Leykis and it made me think, when he said how well his show does late at night. I like talk radio, local is always the best, national talk show can be good, but only if it LIVE. Maybe I'm spoiled, but as a listener as well as caller if there is something I'd like to add to the converstion, I'd like the opertunity to pick up the phone and try to get through. What's a phone in talk show if you can't phone in? Like I said, maybe I am spoiled by the likes of Art Bell, live talk, no screeners, open forum. Alot of you are in the business, how do you feel about "canned talk radio"?

Thank you,
Buzz the RadioSpy, Seattle

Source record: 31035

I was in the Adirondack Region of upstate New York (near Lake Placid)
last week and glanced on 105.1 FM, the home of the late, great WEXP. On
Wednesday (6/21/95), the frequency was vacant. However, on Thursday....
it all changed. Six o'clock on Thursday evening, 105.1 FM was offering
a Beach Boys Greatest Hits CD...all night long and into the following
morning in glorious mono. Finally around noon time, "Kool 105" WKOL
burst onto the Champlain Valley's airwaves with oldies in mono for
roughly 2 hours. After the 2 hour stint, "Kool 105" went dead carrier
for the ENTIRE WEEKEND !!! Not even a stereo pilot tone for good measure !
It will be interesting if this station gets a following, based upon
its' performance over the past weekend. Oh, well "c'est la vie, say the
old folks.............."

From: WCHSNews@aol.com
Message-ID: <3sq8gu$b9a@vixen.cso.uiuc.edu>
Source record: 31036

In a message dated 95-06-21 23:22:19 EDT, you write:

> But guys, wait until its Standard Time and you go on
>night power at 4:30 PM. Don and Mike are on until 7 PM and you don't
>have the WHP flamethrower signal. I don't understand this move.
>
>Comments anyone?
>
>

Uh, yeah. Could you define "flamethrower" signal. Having just come from a station on 580 in neighboring West Virginia, I recall WHP has a 5,000 watt nighttime signal that is incredibly directional. In fact, we used to have a blowup of a CRTC map on the newsroom wall showing all the 580's and their daytime and nighttime patterns, and WHP was pittiful at best. (The station I was at actually increased power at night, but it's directional, so who cares.)
To further pontificate, travelling I-81 southbound through Pennsylvania, I couldn't pick up WHP until after the Cumberland County rest area. Far as I can tell, this is within sight distance of downtown Harrisburg.

Please correct me if I'm wrong. Flames to dev/null:

Wayne Lorentz

## 562. More on WNY Radio

Newsgroup: rec.radio.broadcasting
Date: 1995-06-28 00:00:00 UTC
From: talk1370@aol.com
Message-ID: <3sq8gv$b9f@vixen.cso.uiuc.edu>
Source record: 31037

Sounds like change is afoot at WUFX (103.3), recently purchased along with 97 Rock by Charlie Banta's group....
This weekend (June 24-25) they were using liners calling themselves "The Edge" (certain to confuse folks who also listen to Toronto's CFNY) and playing a much more new rock/alternative-oriented music mix. Of course, CFNY and Fort Erie/Buffalo's "The Planet" 101.1 FM are already doing the same thing, and Rochester's alternative "The Nerve 95.1/95.5" overlaps the eastern portion of the station's coverage area. So, if this is really a permanent shift, that's pretty crowded territory for that format, don't you think?
Meanwhile, Keymarket/River City is advertising in the trades for a new sales management team for its stations in Buffalo, which include WBEN, WWKB, "Q-102" and "Kiss 98.5." 'BEN and Kiss are winners in the Arbitrons, and Q-102 has been enjoying an upturn in its fortunes lately as well...maybe new blood is expected to turn the good numbers into new $$$$? (Now if only they can think of something worthwhile to do with that wasted 50,000 watt signal on 1520...)

Bob Smith, middays WXXI-AM 1370 Rochester NY

# 563. WPLM-FM Plymouth (Mass.) format change

Newsgroup: rec.radio.broadcasting
Date: 1995-06-28 00:00:00 UTC
From: wollman@ginger.lcs.mit.edu
Message-ID: <3sq8gv$b9h@vixen.cso.uiuc.edu>
Source record: 31038

At 8 AM on Subday, June 25th, WPLM-FM (and simulcast sister station WPLM(AM)) dropped their not-overly-successful adult contemporary format to become the Boston market's first full-time ``smooth jazz'' station. The new format was preceded by a two-and-a-half-minute talk by some member of 'PLM's management which was misprocessed into inaudibility. WPLM is one of the Boston area's only commercial FMs which is not owned by a large group owner, and puts a decent signal over Boston, Providence, and Cape Cod in addition to their home territory of Southeastern Mass.

My first impressions of the new format are somewhat favorable; the programming was live and local from the beginning, and I heard promos for a local music-talk program which would run on Sunday nights. The musical selection is not something I would ordinarily listen to myself, but 'PLM may partially displace WCRB as my ``music to go to sleep by'' station. From my vantage point, the music still seems somewhat overprocessed; this may simply be a result of my being on the fringes of 'PLM's primary coverage area.

Radio tower fans should definitely make the effort to see the WPLM site in Plymouth when they are in the area; I visited it a couple of weekends ago and it is one of the best-maintained sites I have ever seen. They do their own groundskeeping, and the grass on their hilltop tower site is mowed meticulously. WPLM-FM transmits from the top of one of the towers on this site, located at the end of Marconi Road, off Columbus Road, which is immediately across from exit 7 of SR 3.

## 564. WPTR/1540 "Golden Greats Reunion"

Newsgroup: rec.radio.broadcasting
Date: 1995-06-28 00:00:00 UTC
From: "PETER Q. GEORGE, N1GGP" <PGEORGE@WELLESLEY.EDU>
Message-ID: <3sq8h1$b9k@vixen.cso.uiuc.edu>
Source record: 31039

What a station this sleeping giant really was ! It felt SO GOOD to hear AM radio sound so crisp and clean from Albany. I had the pleasure of listening to the Reunion Weekend all the way from Lake Placid, NY to home in Suburban Boston. It was great to hear "Boom-Boom" Branigan after all these years. I remember Ed Dague when he used to work for WRGB/6's "NewsCenter 6" back in the 70's. The jingles...."W-P-T-R.....Fifteen-Forty !!!" brought back so many wonderful memories when I was a little lad of 8 listening to WPTR every night while camping with my family on the Kancamaugus Highway in New Hampshire. PTR' always had that BLOWTORCH signal that you could swear came from your back yard.

WPTR/1540 went out with a BANG. The program director for 92.3/WFLY had his long awaited chance to come up to the microphone for the last 3 hours and obviously had a blast, along with the Chief Engineer who really cranked up the volume for this special weekend. The weekend ended with a vintage recording of Alan Freed's CBS network program from 1957. After which at 2359:20, the last thing you heard was "At this time Radio Station WPTR in Albany, New York now ends the "Golden Greats Weekend" and also leaves the air to return tomorrow morning...good night"..... At 0000, a different person (female) gave the weather for the Capital District and said "Rise and Shine !!!!!" and went to the Assemblies of Yahweh service already in progress. For all intents and purposes, the Mighty 1540 was no more.

I may be sentimental when great stations like WPTR, WOWO, WMEX, WMCA go by the way of the TRS-80 computer, but it saddens me when radio stations have become no better than mechanical jukeboxes. These great stations had live people in front of a live microphone broadcasting to (I hope) a live audience. But, this is better said in a different time.

I wish to send a hearty "job well done" to the crew at WPTR/1540 for bringing back those halcyon days alive on "The Friend to the Northeast, 1540/WPTR.... Albany !", if only for a little while ! Salud ! You will be missed.

Peter Q. George, N1GGP
Randolph, Masschusetts USA

## 566. WZLX-Boston fires Ken Shelton

Newsgroup: rec.radio.broadcasting
Date: 1995-06-28 00:00:00 UTC
From: rnolan1087@aol.com
Message-ID: <3sq8h2$b9m@vixen.cso.uiuc.edu>
Source record: 31041

Reply-To: rnolan1087@aol.com (RNolan1087)

The 6/24 Boston Globe carried a story that WZLX (Infinity Broadcasting) had fired morning man Shelton. He had been with Infinity's other Boston station WBCN for many years before shifting to ZLX a couple of years ago.

Shelton was apparently seeking a substantial raise that would reflect his value to Infinity in the market.

Speculation is that Infinity would like to air it's Howard Stern in the ZLX morning slot. Stern is currently heard on BCN via tape delay in the evening.

Sounds like a bad PR and programming move. Shelton is, for many reasons, a
Boston intsitution and deserves a little better.

Richard T. Nolan ... rnolan 1087@aol.com

# 567. ADMINISTRIVIA: Posting Guidelines for this forum

Newsgroup: rec.radio.broadcasting
Date: 1995-06-28 00:00:00 UTC
From: EDITOR@airwaves.com
Message-ID: <3ssh5o$ogu@vixen.cso.uiuc.edu>
Source record: 31042

It has become time for me to set out the basic guidelines for posting
to this newsgroup, and some basic explanations of what the group is
for, and about.

Newsgroup rec.radio.broadcasting (rrb), and email digest
AIRWAVES RADIO JOURNAL (ARJ) are designed to provide a public forum
for the dissemination of information and conversation pertaining to
radio broadcasting. By professional-level, we mean discussions of
matters of interest to radio broadcast professionals and those with a strong
and serious interest in radio broadcasting. We do not limit
participation to broadcast professionals.

In order to keep the forum from erupting into flame-wars and to keep
it on topic, rrb and ARJ are *moderated* forums. This means that all
posts must be approved prior to publishing. This document is designed to
give readers a feel for what is acceptable to publish here but is not
designed to be an all-inclusive charter.

In order to be accepted for inclusion in rrb/ARJ, a post must have the
following minimal attributes.....

1) All posts must have a valid name attached to them in some way.
This means one of the following...
a) A *real name* (your actual name) This is preferred.
b) Your *on-air name* (you must include the station/network at
which you use that name)
If your Internet host doesn't include a real-name as part of the"
From: line, then you should add it to the end of your post.
If you are posting sensitive information, and don't want your
name used, let me know and I'll try to cover for you.

2) All posts must have a valid 'SUBJECT' line.
This means that the subject line must accurately reflect the
content of the post. As a thread drifts from the original
focus, the subject line should be changed to reflect that shift.
Posts without a Subject: line or ones which use a bogus
subject may not be posted.

3) All posts must pertain to the charter of the group, *RADIO* broadcasting.
Occasionally a post about TV will be OK'd if it appears to
have a broad interest to radio people. However, this is considered an
exception and is not encouraged.

4) All posts must be submitted as "ascii-text".
Binaries, MIME and other attachments are not postable to netnews.

5) All posts must be formatted to an absolute maximum of 78 columns. The standard for a text-terminal is 80 columns. We specify 78 to allow for quoting in followups. Failure to do this will result in "line damage" which is the uneven wrapping of lines that are too long.

6) Quoting of previous article text should be kept to a minimum and *never* exceed 49% of the entire article. Never quote the signature files from previous posts. Only use the bare minimum needed to make your points. If replying via the Digest, "please" never quote the entire (or substantial portion of) the digest.

7) Please distinguish between the 'followup' and 'reply' functions of your newsreader. Followup sends your response to the group, reply sends it to the poster via email. When replying to a personal request for information which is of limited or no real interest to the entire group, please email to the poster. There is no purpose served by posting replies to very personal requests to the entire globe. However, if the requested information is of potential general interest, then please do post.

8) When posting Help Wanted or Positions Wanted, please include a Full *REAL* name, Company name, postal address, FAX and/or voice phone and (if applicable) email address.

9) When asking for, or offering, information about a local station or personality, always give a little background. Remember most people are not familiar with your market. If you use a station's slogan, always include the calls and city too.

10) Commercial postings are a delicate issue. Some would like to see none of it, others seem to take the tack that mild commercial posts are OK provided they are not too 'in your face' and are part of the flow of conversation. The moderator makes all final judgements on acceptability of commercially-motivated posts. If you are in any way connected with the company you are posting about, you *must* disclose that affiliation even if you are not an official spokesperson. Avoid blatant commercials. Make your points in conversation. Never overtly bash a competitor's product. Be nice, it will be to your ultimate benefit.

11) Remember that you, the poster, bear all responsibility (if any) for copyright, libel, trademark and other matters when posting to the Internet (not just to this group). Please try your best to be accurate in your posts. If you post your opinion, make sure it is cabled as such. Please try to obtain permission when reprinting from copyrighted sources. Always give attribution of your sources when available. Summarize when possible to avoid potential copyright issues. So far copyrights have not become a problem on the Internet, but as the net grows, it may become more of an issue.

12) Flames are not permitted on this forum. A flame is defined as "personal insult or ridicule". It is perfect;y fine to argue the points or opinions raised by a poster, but not to personally insult

the poster. In other words it is acceptible to say... "Your stated opinion is stupid..." NOT "You are stupid for having that opinion..." It is fine to articluate and argue points of view, but make sure you counter it with another point-of-view and not just hit people over the head. Calling of names is also considered a flame. We have conversations here, not shouting matches.

Also avoid posting...

* Known false or misleading information.
* Items that you know are a violation of copyright.
* Overtly profane posts (profanity is not forbidden, just use discretion).
* Loooong signature files. 4 to 6 lines is a good soft-limit.

Thanks for reading. Hopefully this will clear up some of the misunderstandings about posting to rec.radio.broadcasting. For a more inclusive charter of this group, send email to rrb-charter@airwaves.com .

William Pfeiffer

Item in Robert Feder's column in the _Chicago Sun-Times_ announces that Jay Marvin, late-night host at WLS 890AM/94.7FM, has received clearance to go to Cuba the week of July 9. Jay is scheduled to make some appearances on Radio Havana and will be touring broadcast facilities in Cuba. Jay will also be speaking to a panel of journalists in Cuba.

I gotta get a tape recorder up and running, cause I *know* he wil be appearing on his friend Arnoldo Coro's popular DX program on Radio Havana :-))))

* Smooth Jazz is back... :

This weekend brought a change of format to Plymouth Rock Broadcasting's 50Kw WPLM 99.1FM. On Sunday, June 26th, the station, along with co-owned 5Kw WPLM AM 1390, flipped from AC to satellite-delivered NAC/Smooth Jazz. It's now known as 'Smooth 99.1FM'.

For some 30 years 'PLM was known for its big-band sound. In 1993,it entered into a crowded and very competitive AC race in the Boston market. It promoted itself as 'The New Variety 99.1'. It didnt fare well against such big AC players as WBMX-FM, WMJX-FM and WSSH-FM.

Earlier in the week, WPLM-AM/FM let go most of its on-air staff including Larry King who's reportedly headed to take a night-time show on the local Plymouth area rival AC WATD 95.9FM in Marshfield. The 'PLM was playing automated selection of AC tunes from Thursday till early Sunday morning when Smooth Jazz was introduced.

SideNote : 'PLM's switch to Smooth Jazz marks the return of this format to the Boston airwaves for the first time since May 6th,1993 when Greater Media acquired WCDJ-96.9FM from Emmis for $13 million and made a decision to go with Country and Western sound(now WBCS 96.9FM)...

* Same News, different newsroom...:

On Monday, June 26th, in what seems to be a cost-cutting move, Westinghouse's full-service WBZ AM 1030 started using Metro Networks' customized newscasts from 7pm until 4am. WBZ now joins its main AM competitor, American Radio Systems' all-talk WRKO AM 680, in getting its evening/night-time news from the same newsroom at the Metro Networks offices in the Prudential Center. Bob Ames who's been doing part-time work at WBZ since relocating from all-sports WEEI AM 850 earlier this year, now anchors MetroNetworks' WBZ on-the-hour news updates during David Brudnoy's show.

Back in early April, American Radio Systems made news when it arranged for a couple of its news staffers(Rod Fritz and Pat Carrol) to become employees of Metro Networks and keep delivering the news on WRKO.[Since then, Fritz has been reassigned to anchor local AM-drive news on WRKO's cousin all-business WBNW AM 590; Carrol still delivers local night-time updates on WRKO].

TriviaTime : The first MetroNetworks'[world's largest traffic info gathering organization] customized newscast in Boston first aired on January 11,1993 on the old all-sports Celtics-owned WEEI AM 590.

* Captain Ken silenced....:

On Thursday, June 22, Boston area radio vet 'Captain' Ken Shelton was let go by Infinity's Classic Rock WZLX-100.7 after almost 2 years of doing AM drive at the station.

Ken who was at the end of his 2-year pact which paid him slightly over $200,000/year was looking to double his salary based on the fact that in the latest rating books he outrated his former colleague, Boston's best known and highest-paid morning man Charles Laquidara. [Shelton followed Laquidara for 13 years while he was the mid-day voice at Infinity's legendary WBCN-104.1FM. On July 26.1993, Ken was shifted from his 'Mighty Mid-Day' duties at WBCN to host AM-drive on WZLX. At the time, he offered the following quote, "I dont feel I'll be going up Charles, but that I'll be alternative to him."]

WZLX management refused Shelton's asking price and instead opted not to renew him. After almost 22 years on the Boston airwaves(15 on WBCN and WZLX; 7 on no longer existing WCOZ-FM, WEEI-FM, and WBZ-FM). Captain Ken has been silenced.

'ZLX's PM-drive jock Chuck Nowlin temporarily takes over morning drive while weekend/fill-in Stretch is covering for Nowlin...Rest of 'ZLX line-up stays the same for now....

* Prorgamming Notes :

- Pyramid's CHR WXKS-107.9FM will introduce a new voice to its syndicated 'Matty in The Morning' show. Local talent Sue Tabb will deliver traffic for the Boston audience during Matt Siegal's show starting on July 3rd. Current traffic voice Hank Morse goes back to his work at WXKS-AM. He's been doing AM traffic reports since March when Siegal's sidekick traffic reporter Judy Paperrelli abruptly left the show....
In other Kiss-108 news, its new overnight(2am-6am) voice is Pete Mar. He replaces long-time Kiss personality June Knight who remains with the station in the lifestyle reporter capacity...

- If you're looking for Joshua B's reggae show which used air on WERS 88.9FM, for the past 3 years, he has moved to a new home at WMBR 88.1 FM. The new show is called First Class. It features reggae singers with a touch of R&B. The show is on early Saturday morning from 12:30a-2:30am. If anyone wishes to get in touch him, he can reached by e-mail at teriyaki@ix.netcom.com. Or his beeper / voice mail is 617.683.0814.

# 571. Chicago RadioWatch: 6-25-95

Newsgroup: rec.radio.broadcasting
Date: 1995-06-28 00:00:00 UTC
From: JJB92@aol.com
Message-ID: <3sq8eq$b3v@vixen.cso.uiuc.edu>
Source record: 31078

You're kidding right?.....

Steve Cochrane, morning host at adult contemporary WPNT-FM (100.3) has consistenly failed to show up in the top ten in the morning rating game. In fact, the entire station remains in the high 1's, low 2's district which must be a disappointment to the powers that be. Steve, who arrived from Minneapolis with a good deal of hype, reportedly has received feelers from stations in New York, Los Angeles and San Diego. If true, radio station owners/program directors are in the same league as major league baseball owners. Neither group has shown much of a penchant for judging and paying for talent.

The revolving deejay door.....

Mike Hudson, host of "The Quiet Storm" on top ranked urban contemporary WGCI-FM (107.5), has decided to retire to pursue other interests. Irene Mojica takes over Mike's shift and Jeanne Sparrow, formerly with Shadow Traffic, takes over the overnight shift from Irene.

Bill Garcia, evenings at country music WUSN-FM (99.5), has been moved to the midday slot taking over from Nancy Turner who retired from the industry. Bill had been at talker WLS-AM (890) prior to arriving at USN. Jeff Henschel takes over the evening slot from Bill.

Kim Kelly takes over middays at suburban classic rocker WABT-FM (103.9) The slot had been vacated by Cara Carriveau who worked with Kevin Matthews on entertaining talk WLUP-FM (97.9) for a short stint before being dumped.

On second thought, come on back.......

Phil Duncan, former morning man at WPNT-FM, returns on Saturdays at the station.

Tony Fitzpatrick, former evening talk show host on WLUP-FM along with Wendy Snyder, returns to the Loop to host a solo show on Saturday evenings from 7-10pm. Tony will precede former porn star Seka who now starts her show at 10 pm. Also at the station, Liz Wilde now gets Saturdays off. Wendy Snyder and Bill Leff pick up her afternoon hours, 1-4 pm.

Station ownership news.....

WOPA-AM, (international Spanish) will become WLXX and switch to Mexican country. Heftel Broadcasting, one time owner of WLUP-FM, has brought in Chuck Brooks, former VP and GM of WIND-AM, to run the station.

Pyramid Broadcasting, owner of smooth jazz WNUA-FM (95.5), is reportedly down to six buyers for their stable of stations. Evergreen (WLUP, rocker WRCX, and WMVP among others) and Gannett Broadcasting (WGCI-FM and AM) are still in

the running. Bids could go as high as $30 million dollars.

Monkey see, monkey do.....

The morning show at rocker WRCX-FM (103.5), has apparently taken a page from WKQX-FM. As you recall, KQX has gone through morning hosts at a rapid pace. RCX has taken that route regarding morning show producers. Midge (Luvcheese) Ripoli is leaving the station to host a program on San Jose's KHQT-FM. Midge replaced Allan (Gump) Fee, who left the station earlier this year to become a Program Director in Iowa. John Desjardins in from Omaha takes over on the Mancow Morning Madhouse. Actually, the producers are improving themselves while KQX improvement is questionable.

Message-ID: <3sq8es$b42@vixen.cso.uiuc.edu>
Source record: 31079

Reply-To: ap048@lafn.org (Donald Paschal)

Saul Levines's Mt Wilson FM has changed the format of one of thier 2 AM stations. KOJY/Costa Mesaa will, as of next week,probably, become KNNZ(540 am), all news, primarily from the AP All News format. Previosuly, they've been simulcasting Standards with KJQY/Beverly Hills(1260am), which will stay pat.

++++++++++++

The problem KNNZ(call them "K-News") has: signal. It goes, basically, from Orange County east to the Nevada border, almost bypassing the LA area...which means it won't be able to give the staid, ancient-sounding delieveries of KNX nd KFWB a well-needed shake-up.

A couple of items from around the dial in the Big Apple:

WFAN has moved Steve Somers from overnights to middays, co-hosting with Russ Salzberg. Somers has hosted overnights since the beginning of the sports station in 1987.

Congrats to the NJ Devils for winning the Stanley Cup. Even more amazing--WABC carried three of the 4 Finals games. Their flagship has given the team no help and repeatedly bumped them when the Yankees were playing. Now the question is--will the Devils move & who will carry them? WABC's contract is up.

WCBS-FM PM Driver Bob Shannon shook up listeners last Wednesday when signing off with a semi-cryptic message that suggested he was leaving the station. PD Joe McCoy, in Friday's NY Daily News, says Shannon was taking a couple of days off and would return and there was nothing to it. But, with the recent departure of Max Kinkel and shuffling of the night lineup, McCoy says the timing just wasn't right.

Congrats to ex-Z-100 morning maven Ross Brittain and his wife, WLTW News Director Rasa Kaye on their new addition born on Wednesday 6/14.

Kiss-FM Morning Man Ken Webb as Knicks Coach??? He conducting an on-air campaign for the job.

Jo Maeder, the Rock & Roll Madame, is back on the air at Z-100 on weekends, joining the staff along with ex-WPLJ'er A.J. Hammer.

Hot 97 Morning Team Dr. Dre & Ed Lover are being courted by New World TV to host a late night TV show. The duo previously hosted Yo! MTV Raps.

Mix 105 Morning Man Jim Kerr played Santa and Cupid for Traffic Reporter Karen Stewart. It started last December when Stewart asked Santa Kerr for "the cute bartender she met from Beefsteak Charlies the other night." Kerr was able to get him and Stewart together, and recently, Mike Matzo (the bartender) proposed to Stewart live on the air with 144 red roses and a diamond ring.

Former WABC-TV newsman Roger Grimsby died Friday of Lung Cancer at 66. He was best known as one of the co-anchors for Eyewitness News in NYC for 16 years, and did commentaries for ABC Radio News.

That's all for now--Take care---

Tripp Rogers

Nashville radio talk show hosts Teddy Bart and Karlen Evins say they have exercised their option to buy WKDA-AM (1,000 watts) from Dick Broadcasting, owner of Nashville's WKDF-FM and WGFX-FM. They are expected to move into the old studios of WWTN-FM, recently purchased by Gaylord Broadcasting, owner of WSM-AM/FM. WWTN will move to WSM-FM's studios. WSM-FM is now broadcasting from the Opryland USA theme park, also owned by Gaylord. Bart and Evins, who are now doing mornings on WKDA, are former talk show hosts at WWTN and WLAC-AM. Brent Stoker, former promotions director at WSM, will become WKDA's general manager.

Rhett Walker, former sidekick and newsman for Coyote McCloud's morning zoo crew at WYHY-FM, is now hosting mornings at Nashville's WRMX-FM (oldies). McCloud has yet to resurface.

The Ralph Emery Show, set to debut mornings on July 10th on The Nashville Network, a country music cable net, will feature weekly simulcasts and interviews with country radio morning shows across the nation.

WKDF-FM operations director Pat Ervin has left Nashville for WKLS-FM in Atlanta, where he will serve as marketing director.

## 580. AM congestion

Newsgroup: rec.radio.broadcasting
Date: 1995-06-28 00:00:00 UTC
From: talk1370@aol.com
Message-ID: <3sq8f3$b4s@vixen.cso.uiuc.edu>
Source record: 31087

Can't blame Clarke for sticking up for his down-the-hall colleagues...in his position I'd do just the same thing. But WHTK is like hundreds of other AMs in large markets across the nation who are now struggling to serve their expanding metros. In a way, it's a very good case study of what's happening to the entire AM band in the US.

It has a definite signal problem, not just because of the power and the number of towers used to generate the night pattern, but the way the towers are configured and phased to just about kill the signal on the east-west axis and shoot nearly ALL the power north-south. (I've seen six-tower patterns from stations like CHUM in Toronto that were downright loose, not all that far from non-directional, so the complexity of the array doesn't necessarily mean a super-restrictive pattern.)

We have a real problem to the west-southwest ourselves, as do almost all the Rochester AMs. (We no longer pull in our signal dramatically to the east and southeast at night, because of an extensive antenna reconfiguration in 1990-91.) It's all because of other stations jammed onto the band in the years from 1945 to 1970, and again during the deregulation area of the 80s.

The trouble for each individual station comes when it's the middle of morning drive in late fall, winter and early spring, the sun hasn't quite come up yet, and you can't cover the growth areas of your metro---in this case, the eastern and southeastern suburbs where a lot of the population in the Rochester metro now lives, and a majority of the growth in the market is now occurring. (The same problem repeats itself in late afternoon when you can lose the signal in the middle of the drive home.) WHTK has a severe problem in that direction because it has to protect WADO in New York, which has just received a CP to go to 50,000 watts DA-2. That's going to get worse rather than better. There IS room for them to spread their pattern out to the northeast (where CJMS in Montreal went dark a few months ago)...not much opportunity for growth elsewhere, unfortunately.

This is an example of a big problem a lot of Class B (formerly Class III) AM stations are facing in markets all over the country. They were established either before or slightly after World War II, in markets where, at the time, most of the population of a market could be reached with a tight pattern concentrating a strong signal in the central cities and near suburbs. Now the population has spread out beyond the pattern...and with the growing congestion on the AM band, many stations are literally crippled in their ability to serve their markets.

You could argue that the AM band is so overpopulated now, that something will have to be done to REDUCE the number of stations on the band to make the situation better for those that might be strong enough to survive. IMHO, a combination of minimum requirements for news & public affairs programming, and a minimum daily local origination requirement, will clear out all the stations taking up space with endless relays of the same satellite service, or the same taped infomercials and religious programs...and leave the bands to everyone who's interested in actually serving his city of license and surrounding metro area. Without that, anything they do to improve their programming, or increase promotional effort (beyond the saturation TV schedule they are already running) can only accomplish a limited amount.
This isn't a knock on WHTK in any way, just a comment on how the plight of WHTK is an example of the troubles that once-strong AM stations are now facing across the US. It was happening to us as well, until we spent about 50 grand to reconfigure our antenna...and we were lucky, not very many stations even have room to maneuver in that regard any more.
Of course, idiocy like putting a 50,000 watt station on a regional channel just 300 air miles from several other co-channel stations has also got to stop...

Bob Smith, middays WXXI-AM 1370 Rochester NY

Hi there folks.
There is something taking place in radio today I find very disturbing. Where have all the jocks gone. Almost everything in the smaller to mid size markets is being pumped in by satelite. Management say they like it, costs are down and they are putting out a product that is professional. This is true.....but wait 5 years down the road. I remember when I broke into the business in the late 70's, the new kid on the block was doing the "All Nighter" and making all of their mistakes then. Today it's satelite. I have been out of the business now for about 8 years but I still keep in touch with the people at the station I worked at. Back then we had probably 6 to 10 jocks on staff, a few weeks ago it was announced that the station was going to automate. They now have 2 full time "on air personalities" & more salespeople then jocks. I am not a person who is down on advancement, but in this case, I think the station owners and management should take a second look at what they down to the industry we all love. Five years from now there may not be any talent out there to draw from. I am sorry to say I feel they are taking the "Personality" out of Personality Radio. Now it's your turn what do you think?

>station, it draws well in Baltimore competing with classical station WBJC.

Um, Jim, what is your source for the last sentence in your post? To the best of my knowledge, WJHU at 88.1 is licenced to Baltimore, Md., always has been, and always will be. This goes back to the days when it was a student-run station at Johns Hopkins, prior to a power increase, and the University's subsequent takeover of the station and the switch to a classical/jazz/news & info format. (What's WJHU's current power? I seem to remember the initial power increase from 100 watts to 25K, but I could be wrong.)

I think what may be confusing you is that also at 88.1 FM, about 35-40 miles to the south, is WMUC-FM, a 10-watt student-run FM at the University of Maryland in College Park (a suburb of D.C.). The stations co-exist at the same dial position only by virtue of the fact that because of distance, and WMUC's much lower power, neither interferes significantly with each other. I can speak conclusively on this, since I was one of a number of folks responsible for the original licence application work for WMUC-FM, part of which included checking adjacent frequencies in neighboring markets.

Cheers,
Max

WCBM has signed on with The Weather Channel Radio Network (they serve
about 120 stations, I believe). TWC signed on with the station today
(6/26). Up the road in Philadelphia, country station WXTU started with
The Weather Channel Radio Network today, also.

TWC stations get 24 hour service and get their call letters pasted all
over the cable network in their markets.

Interesting. As I recall Infinity mader a promise to the FCC that they would not put Howard on WZLX if the purchase was approved. So, they put him on 'BCN at night instead... They are clever, aren't they? Anyway, with Howard publicly stating that he's done with radfio at the end of his contract - anyone buying it? it might be silly to piss off the FCC, ZLX cume and much of Boston for a short run...

But who knows.

Reply-To: lancebkost@aol.com (LanceBKOST)

This is a question for all of the other music jocks on r.r.b...

Have you been receiving an extraordinary amount of E-Mail from people who want to hear the new Debbie (They call her "Deborah") Gibson song, "For Better Or Worse"? In the past week, I have received 5 dozen E-Mail's from people asking that we at KOST play it. All of them say that they love listening to our station, (Even though their AOL Profile might list that they live in Schnectady, New York)
and that we should play it.

It almost seems like they all are members of the Debbie "Deborah Gibson" fan Club, and were told to ask as many D.J.'s as possible to play the song. Here's an example:
---
>Subj: Deborah Gibson
>Date: 95-06-22 23:56:11 EDT
>From: BritSkye
>To: LanceBKOST

>Hi!
>As I'm sure you are aware, the 5th album by Miss Deborah Gibson will be >released on July 4th. The first single, "For Better or Worse", will be released on >June 26. This should be a great song, and i am really excited to hear it!! A >beautiful ballad written and produced by Deborah herself, this song is sure to get >lots of attention! I don't know how much pull you have in deciding what gets >played, but i would really appreciate it if you could play "For Better or Worse"!!

>thank you,

>Britta

Now I did some checking on this person... She is 16 years old, and lives in Cape Cod!! More than a hop, e-skip, and jump from L.A.!! And this is only one of about 60 of these that I've received. Is Debbie in this much career trouble? Let's hope not. A few E-requests would not have made me suspicious, but this seems weird..

## 587. The Deregulated Future of US Radio--Just Like Mexico

Newsgroup: rec.radio.broadcasting
Date: 1995-06-28 00:00:00 UTC
From: Tom Desmond <wsu@mimi.itg.ti.com>
Message-ID: <3sq8fd$b5m@vixen.cso.uiuc.edu>
Source record: 31094

The following appeared on page 38 of this week's "Broadcasting & Cable" magazine:

Proposed broadcast ownership deregulation in Congress will lead to greater concentration of media interests in fewer hands, analysts say. Indeed, some think that broadcast ownership patterns in the U.S. may mirror those in Mexico, where a few companies own 100 or more outlets...

[End quoted material]
Anyone else find this scary? After all, Mexican broadcasting is not exactly known for it's free and open discussions on political manner. Rather, from what I get via C-Band satellite, it appears to be mostly dubbed American TV shows and cheap "novellas", with a level of commercial interruption that makes American TV seem commercial free in comparison. Newscasts don't seem to be exactly willing to take on the government, either.

And this is what we want US broadcasting to become?

Tom Desmond (who wonders if deregulation will destroy my dream of owning a station some day).

[Moderator's Note: Unlike many here, I am *very* scared at the result of all this deregulation. Bill]

Your idea of a joke is not that off center. What could be better than
using a digital subcarrier to augment radio? A way of providing details
and still pictures as a way of expanding the audio content.

Think about this, Brush Limburger says he has a newspaper clipping or
"secret document" that proves that Speaker Neutron G. Grinch is on the take
from the ultra left wing. Well instead of paraphrasing key lines as a
way of motivating his audience to hatred of the "traitor", he can now put
the item in a scanner so people with a digital interface and monitor
plugged into their radio or connected to his www site can read it for
themselves.

Take two; morning funny shock jocks plug in the traffic copter, there is a
multicar pile up on the interstate. Now listeners can see a still the
flying reporter took of the gory mess on their car's CD-map/satellite
locator viewer screen.

Take three; all news stations can cut stories down to headlines, the full
story is in text on the screen. The station can now air more commercials
on the voice channel.

Take four; do-it-yourself and cooking shows return to radio as the
blueprints and recipes, too long to copy down, pop out on the attached FAX
machine.

Now lets put it all together by putting the receiver and video display in a
pair of virtual reality glasses. Forget about the implant, they may have

the capability of taking the VR glasses off, but would they want too when
they are being bombarded by addicting 3D pictures of Howierd Sterno?

if you want to look at something that will work beautifully without all the built in trouble (touch screens), then call Z-Radio in Stockholm Sweden and talk to them about SMART Broadcast Systems. These are rock solid music on hard drive units that are great for live assist operation or complete automation. They use ACE audio cards and provide the BEST digital audio. The more flash you look at, the more trouble you will find down the road. Good luck.

It's
my long term planning opinion that FM will survive if they continue to
provide a local service of value. DMX can't tell you what's going on. DMX
also can't give any percieved connection with a real person who
lives and works in
your community and understand what going on.

It is true that some FM will be hurt by Satelite delivered programming. this
will be especially true if the station is automated and programs mostly from
satelite sources.

Lewison@duke.iccc.cc.ia.us

## 591. Will DMX replace radio?

Newsgroup: rec.radio.broadcasting
Date: 1995-06-28 00:00:00 UTC
From: RobABass@aol.com
Message-ID: <3sq8fg$b5s@vixen.cso.uiuc.edu>
Source record: 31098

gcjh1@aol.com (Gcjh1) (nameless..?) writes:

>Will FM radio as we know it ever be replaced our even threatened by
>Digital Music Express (DMX)<

IMHO only... no it will not. Because DMX is restricted to
home/office and cannot be taken out to the car or to walkman radios,
where a majority of radio listening actually occurs. Also the average
listener only listens to radio for appox 15 minutes. I don't think
too many people would be likely to sign up with DMX, just to tape 15
minutes worth of it to take to the car. Also when TV was introduced,
it was predicted that radio would be a thing of the past.
Well as we can all see, that never happened...

The real questions is do you think a consumer (not business) would pay
a fee +/- $6 for cable - $18 for satellite for music and would it
effect music based format FM stations like cable did to local TV?<

Absolutely not. There is a BIG difference between TV and Cable and
radio. You can show indecent and controversial programming on cable.
This is why cable TV does better than regular TV. Well between radio
and TV, with radio,

you must "use your imagination, to see the DJ while he/she is talking
to you,

which is fun and interesting, and entertaining... On TV you can see
the guy in the clown suit with the red nose. big deal........

My company sells DMX service to commercial establishments in Western
MA and Rhode Island. It's a great deal to business since it's only a
couple of bucks more than Muzak with 10x the selection and pays ASCAP
for you, YET I don't see the comsumer side spending the $$$<

I'm not the least bit surprised... DMX was poorly promoted to the
consumer market to begin with. It has been around for about 3 - 5+
years, and I have heard that DMX has a very short life expenctancy.

Music isn't the ONLY reason why radio is as successful as it is today.
Talk radio is gaining rating shares (most likely because of political
talk shows such as Rush Limbaugh, and those so called "shock jocks"
like Howard Stern.

Additionally there are sports talk radio formats , computer
information talk shows, and all kinds of other interesting and
appealing talk formats that are not on DMX. Let's face it, people
seem to like radio because it has talk. There are stations out there

that will do "30 minute music sweeps" where all they do is play music for 30 minutes and never talk. Geee if I want that, I'll pop in a CD or a tape. One of the reasons why I love radio so much, is because I get to hear people talking!
And I like local talk... I hate syndicated radio formats where it's "24 hours a day" of satellite programmed music.

What you hear on the radio is formatted per the music/program director. This is also the case with DMX, except YOU are paying for someone to format your favorite channel. So, why pay for a formatted channel, when it's free on radio?

>So as radio folks what do you think? Will this kind of service have any >effect on FM?<

Digital radio broadcasting is already in developmental and testing stages, and as soon as it is perfected, I and several other broadcasters expect it will be THE next form of radio broadcasting. It will be the "WAVE of the future...."

Radio as we know it, will never die.... it will only improve. Wireless broadcasting just has too many convinences that cable music can never come close to meeting.

Rob

## 592. DMX vs Radio

Newsgroup: rec.radio.broadcasting

>
> The real issue of DMX is the price and the lack of mobility.

As a former DMX subscriber, I can say that the real issue is the lack of musical expertise of the programmers. Digital sound is great, no commercials is great, no idiotic patter is great (sorry, jocks), the information readouts (with title, artist, songwriter, producer and label) are great, and the variety and specialization are great. But a mix is a work of art, and the computerized randomization of the music falls flat. As Bruce would say, "Gimme that human touch." Also, there is the same type of corporate "lowest common denominator" mentality that defines television programming. This tendency denatures some of the vital formats, like rap, metal, reggae, alternative, even blues, by bowlderizing them for American living rooms, leaving those formats virtually worthless to afficianados. They should hire me to program the Reggae. I'd have this country in a revolution in five years.

It was my understanding that WADO was granted 50,000 watts day and keeping
its 5,000 watts at night...for WHTK's sake, I sure HOPE that's the case.
I can't imagine WADO running 50 kw-N that close to Rochester unless
they're putting up eight towers or something and blowing it all out into
the Pacific. And even then, some skywave is bound to happen in WHTK's
direction.

> promotional effort (beyond the saturation TV schedule they
> are already running) can only accomplish a limited amount.

Do you really suggest that we essentially regulate AM stations out of existence, making the band even more unprofitable than it already is for all but a handful of major AM broadcasters? In effect, run the others out of business? I take great exception to this. I'm a little worried about deregulation, but MORE regulation is not the answer here. (Unless it's the FCC decision to allow AM stations to buy other stations on the AM band and take them dark, which seems to me to be the open market at work, and with which I'm in agreement.)

(Would it be gratuitous of me to point out that WXXI-1370 is public radio and not subject to the same economic forces that impact commercial broadcasters like WHTK, and would therefore not likely be affected by the regulations suggested above, and consequently might speak from a rather different perspective on the matter?)

15 years ago, when GM's were first pitched satellite delivered formats, I
saw it coming. The mistake radio is making is drying up the pool of the
next broadcasters coming up. The good news is that many of the
"bottom-liners\" sound that way. The trick is to integrate the satellite
delivery with local personalities,

But, alas, the day seems to have come when one can, literrally, place a
radio station in a closet, and run it with no humans at the com, whist
you go out and sell spots for it. I pray that what happened to me when I
worked at KROF/Abbeville, LA several years ago does not happen to these guys:
One day we came back to the staion to find that the satellite reciever
was stolen...pobably by someone who thought he couyld use it to get free
HBO. We were off line from Mutual for 4 weeks...and that was only for an
hourly newscast. Imagine a small-town staion on satellite out for 4
weeks. My God!...they'd have to come up with....shudders!!!!....***local
programming!!!!!*****

Yes.

I forsee music radio a thing of the past as soon as DMX (or its rivals) figure out a digital distribution
method direct to cars. It will kill the top 25% of the demographic market. Lots of surveys show that
most people don't identify with the disc jockey--just the music.

For $6 a month, you can get a lot of music and no talk. Great deal.

You are asking the same question people asked about HBO or pay-per-view 20 years ago.

He who ignores history is condemned to repeat it.

But there's a hell of a future in local radio because no national service can get involved with the
community like radio. Which is going to leave a lot of operators up the proverbial creek since they
know nothing about local radio.

## 598. Re: Will DMX replace radio?

In article <3sdju7$lcf@vixen.cso.uiuc.edu> gcjh1@aol.com (Gcjh1) writes:

:Will FM radio as we know it ever be replaced our even threatened by
:Digital Music Express (DMX) or other similar digital satellite services?
:<snip>
:The real questions is do you think a consumer (not business) would pay a
:fee +/- $6 for cable - $18 for satellite for music and would it effect music
:based format FM stations like cable did to local TV?

I doubt it, unless the quality and variety gets higher. I subscribed to DMX in San Francisco, and was interested only in one or two of the channels (New Age type music and classical). The repeat factor is really evident when you listen for more than a week or so.

And, the fact that (at least at that time) only classical snippets rather than whole symphonies or operas were played, means that the serious classical music listener won't be satisfied.

Absence of jocks is good for a while, although it gets to you sometimes. It means that DMX has to be mixed with regular radio or other medium (for news, etc.) Especially good for establishing a mood (kind of like a candlelit dinner for the ears).

On the other hand, the information about the music which is transmitted to the remote is a great feature. And the sound was great, although there were dropouts fairly frequently (order of 2-3 times a week while I was listening).

:My company sells DMX service to commercial establishments in Western MA
:and Rhode Island. It's a great deal to business since it's only a couple
:of bucks more than Muzak with 10x the selection and pays ASCAP for you,
:YET I don't see the comsumer side spending the $$$.

Great for business because of the ASCAP payment. You're right about the consumer side.

:So as radio folks what do you think? Will this kind of service have any
:effect on FM? I personally like high profile jocks on the radio and will
:listen to a station at times more to hear the personality then the song.

There's room for both, and some people will want both. Few people, IMHO, will want only DMX.

Don't be a schmuck.

KTRT/KBIX runs 12 hours a day of live, LOCAL, interactive talk and we do an excellent goddamned
job of serving our community(ies).

And, FYI, I spend a lot of my money supporting some politicians and opposing others.

We are extremely active in the community and, as I constantly tell my staff and our listeners, you can
NOT serve the public interest, convenience and necessity when you are broke and off the air.

And for your holier-than-thou further information, the way a little guy like me got there was because a lot
of big guys decided that AM radio was dead and stopped buying them, lowering their market value until
a good operator like myself was able to finance a deal.

I make money in radio the old fashioned way. I work my friggen ass off. But I am not going to be
dictated to by a bunch of snot nosed people who want service without risk. Every day before I turn the
key in the lock, I am out about $1,000. That's about $365,000 a year just to keep those "pesky
listeners" entertained.

Fortunately, I do a pretty good job of making some relatively low-power am stations profitable. Both
were off the air or losing tens of thousands when I got them.

I don't have to apologize to you or anyone else for the way I run my business and for my opinion that
capitalism is a pretty damned good system.

And any time you want to match my credentials in the broadcasting business and my credentials in
serving my communities of license, you can shoot off your mouth. But understand this: when you want
to talk to an audience of local radio station owners who live in Tulsa, it's a pretty small audience. Me.

And I still don't run my stations for you.

I run them to make money. And I do a damn fine job of serving the community because that's what
makes money in my case. And I'm not afraid of duopolies because I can play the game to.

When you want to start putting your money where your typing fingers are, I know a duopoly in east
texas that's for sale and I'd like to see you do more than whine in print.

(Let's see if you censor any of this)

In a message dated 95-06-25 23:23:45 EDT, you write:

>It is this attitude that is, essentially, ruining radio in the USA.
>The attitude, so well stated by Fred, is the "We don't care, We don't
>have to" attitude that has turned radio from a profitable 'public
>servant' to what it is today...

Bill (if I may call you that) thank you! You've come to the heart of a large, complex and seemingly unsolvable problem. I've been stewing for a long time about what has happened to radio in the few short years (at least I like to think short) I've been in it, reading week after week how once viable, profitable stations are being lost to duopolies. A few years back, before the big D (as in deregulation), I thought it was the consultants that sucked the life out of radio. Now...what was left of a once vibrant, varied entertainment medium (one which at one time served the public interest *at a profit*) is being bled to death by a corporate structure that cares little about the public.

The federal government did the American public a huge disservice in providing a way for the monied in society to acquire all they could, in the name of profit. And, unfortunately, I agree that it's something from which the broadcasting business may never recover. Someday, the listening public will actually wake up and notice the same satellit-ed, computerized clap-trap emanating from every dial position, and wonder what the hell happened. I for one hope that it won't be in the too distant future.

Jack Moore

And there's the whole problem with broadcasting today... I thought I
(vaguely) remembered reading that the broadcast bands were public
property, to be used to serve the public interest. Making money should
come as a (gasp!) second interest. Of course, as more and more
broadcasting operations are controlled by fewer and fewer interests,
they'll have more control over regulations, tightening their grip over
America's broadcasting system.

Hmm.. well it seems like a "follow the money" case to me. One part of the radio owners (those owning stations just outside metreo areas) wanted to get a piece of the metro pie. They put Rule 80-90 into motion, allowing move-ins and upgrades which further fractionalized the metro media revenue pie. It also raised the interest of investment broadcasters who saw the opportunity to make a lot of money by buying stations and flipping them as soon as possible for profit.

That, in turn, set off a buying spree (remember the '80s?). The price spiral for broadcast properties throughout the 80's was not good business, it was a bunch on investment broadcasters playing "hot potato" with broadcast properties. It was not done in the public interest. What we see now is the "Orange county effect", only worse. Now broadcasters, some previously deemed good and some not so good, are trying to figure out how to pay for the losses incurred by that gambling spree.

So, it's not about "business" as opposed to those silly programming people, as suggested by one posting. It's about the industry reacting to BAD business decisions (the '80s) with more bad decisions in the '90s. As a result, both the broadcast industry and the listeners lose.

I don't expect anybody to cop to this, but that's really what's going on.

Please feel free to forward this posting to the congress person of your choice in an attempt to rip the scab off the festering boil we now call the broadcast industry.

PS: No salesman will call.

What interesting discussions in this forum!

The duopoly posts have been particularly grabbing...especially from the man who doesn't believe radio exists for the listener's pleasure. This type of narrow, only money matters attitude scares the daylights out of me.

When I got into radio 21 years ago, it was a place to inform and entertain listeners while having a helluva lot of fun. Today, that radio appears to have vanished forever. And that is sad.

As for duopolies, I would like to butt-kick the person who came up with the idea. Last June, the management at my station decided to purchase another local station. The purchase price? Over three million dollars. This spent by management that has denied ALL raises to ALL employees for the (at that time) previous five years. (You read that correctly, no raise, no even COLA, for five years.)

In September, major staff changes were made, swapping staffs between the stations, and assigning our news department to do newscasts for both stations.

I went from co-anchoring six morning newscasts on our station, to being the sole anchor for both stations...15 newscasts per morning. Raise? Do pigs fly? A more than doubled workload and still no raise for (now) six years.

I feel certain one day, this type of arrangment will come back to haunt managers who force people to work themselves to death...at my company and all others who engage in this type of brutal, heartless, selfish practice. I just hope I'm still around to see it happen.

On a brighter note, a few months ago, there was a thread on clear channel AM stations. I got me thinking and, one morning, driving to work at 3:30am, I switched over to my AM dial and hit scan.

After stopping on a few hot spots of white noise, the radio locked onto a signal clear enough to listen to. As I listened, the regional accent started to sound VERY familiar.

I reached down and punched the knob to display the freq. When I saw "1020" I almost drove off the road. This native of Johnstown, Pennsylvania was listening to KDKA, Pittsburgh!

I still hate my job and hate working mornings, but at least I have a few minutes of smiling during the drive in.

## 607. The Irrelevancy of Duopoly

Newsgroup: rec.radio.broadcasting
Date: 1995-06-29 00:00:00 UTC
From: transvox@interstate.net
Message-ID: <3sti09$rio@vixen.cso.uiuc.edu>
Source record: 30964

Investigating radio history, something I do in my not-so-copious spare time, provides an excellent sense of perspective regarding trends in the industry. Radio's been around long enough that history's beginning to repeat itself.

It's within that framework that I offer some observations regarding the question, "how local is radio?" or, more important, "how local should it be?"

When radio started rolling along in earnest in the 1920s, there was no choice. If you wanted to put something on the air, you had to produce it yourself. Networks were still forming. Stations retained staffs of entertainers to provide musical programs and "talks."

Gradually, as networks formed, this style of programming began to fade away. Even into the 1930s, though, stations in smaller communities continued to produce their own programming. Playing recordings was considered taboo (not just at the local level but also at the networks).

By that time, there were NBC's two networks plus CBS, but larger cities still had more than three stations and they, too, produced their own programs.

The big-city stations of the 1930s, like Kansas City's WDAF and KMBC, or St. Louis' KSD and KMOX, mostly relayed whatever the network fed down the line. Sounds like satellite radio of the 1990s. The independents, such as WHB and WIL, often with daytime-only or weaker signals, had to work harder, especially during the Depression. Columbia's KFRU was so short on cash that it paid some of its entertainers with chickens obtained in barter from advertisers.

With all that, local programming was considered second-rate. For instance, KFRU proudly announced its new NBC Blue network affiliation in 1941, even after its regional-coverage signal had been replaced by a 250-watt Class IV license in the swap with St. Louis' KXOK.

News wasn't much of a factor, except for brief "bulletins" read a few times a day, often by arrangement with a local newspaper. Local service took other forms, usually scheduled event coverage.

World War II brought radio news a more prominent role, one that it would keep for another 35 years or so. With the advent of TV, smart stations, to survive, began emphasizing local news and features.

TV stations focused *their* local efforts on entertainment shows; local newscasts often were no longer than 15 minutes. Breaking news still was covered best on radio.

The radio networks were clearly dying by the late 1950s.

KMOX, KFRU, WDAF, KMBC all began extensive schedules of programming oriented toward news and public service. WHB and KXOK took another route with Top-40 music-oriented programming with DJs who became local stars.

Now we're back, in a sense, to an earlier stage of radio,

with networks of stations oriented toward providing entertainment.
Why this happened could fill a book.
And it's not to say that it's all good. The decline of
radio news and full-service radio is evident. Some of it was not
well programmed. Some stations were treated like commodities, bought
and sold like hog futures. Some of it is due to factors beyond the control
of radio professionals: TV can do just as well covering breaking news;
younger listeners grew up on FM stations that downplayed news; people
seem to be turning inward and withdrawing from society; there are many
competing sources of entertainment; debt service is crushing quite a
few stations; and so on.
Have you looked at your local newspaper lately (much less tried
to *read* it)? The same factors are at work. It's a lucky city whose
newspaper hasn't declined into colorful lifestyle popcorn news. Kansas
City has been lucky, with the _Star_ (under chain ownership) upholding
its traditions; St. Louis hasn't, with the decline of the
_Post-Dispatch_ (under *local* ownership!) being one of the saddest
things I've ever seen in journalism.
Have you watched local TV news? How much of it is breaking news,
versus features, pet adoption spots, sports, and Doppler weather radar
images from major cities of the Western Hemisphere?
Radio, as does any medium, both reflects and shapes society and
those who live in it. People aren't as involved in their communities
as they once were, and radio reflects that. Radio gives them 50-minute
continuous commercial-free non-stop power lite hit mixes, and
so people's expectations of the service they get from radio are lowered.
There are a few exceptions out there. I think they're smart, because
they're looking to the long-term. But radio is a sales-oriented business.
By definition, a sales-oriented business will be focused on short-term
numbers. News and local service cost money and the payback is not immediate.
I believe all those factors overwhelm any good or harm that duopolies
and less restrictive ownership limits will cause. It depends on the owner
and the station's management. KMOX was (and still, despite Rush Limbaugh,
is) the Voice of St. Louis. It's been owned by CBS since 1936. KFRU is
the leading station, a true community voice, in Columbia, Mo. For most
of its life, it's been under local ownership and, most recently, was
rescued from foreclosure by a duopoly.
I suppose it's fun to deplore the trends, but someone's got to
pay the bills. There's a reason you hear so much about the O.J. Simpson
trial: your friendly local or not-so-local media outlet is making money
off it.

Reply-To: hendrixman@aol.com (HendrixMan)

This position is ideal for the medium-market production guy to get into a major market. It is not the sweetest production gig in town, but it will pay you a living wage, and provide you with an entrance into a great market.

Position requires excellent voice and production skills, along with ability to work well with on-air talent, sales staff, and management. Does not require writing. Analog equipment; don't even think of a digital audio workstation!

The nature of this opening is confidential, and I will discuss it only with those I feel may be qualified. If you think this is you, call me at WBEB Philadelphia (no, it's not my job that's available) at 610-667-8400 during business hours (eastern), or leave voice mail at 610-664-4566, extension 214. I'll be in the studio through Friday, June 30, then return from July 4 weekend on Wednesday, July 5.

In a previous article, radiobzz@aa.net (Jim Rhoades) says:
>
>I just read a post by Tom Leykis and it made me think, when he said how
>well his show does late at night. I like talk radio, local is always the
>best, national talk show can be good, but only if it LIVE. Maybe I'm
>spoiled, but as a listener as well as caller if there is something I'd
>like to add to the conversation, I'd like the opportunity to pick up the phone
>and try to get through. What's a phone in talk show if you can't phone in?
>Like I said, maybe I am spoiled by the likes of Art Bell, live talk, no
>screeners, open forum. Alot of you are in the business, how do you feel about
>"canned talk radio"?

First, I can kick myself for missing Tom's post!

As for so-called "canned" radio....I'd love to put together a kick-butt
type show ala Leykis for late night. Unfortunately, we are stuck with
the like of Bell, who whose show not only has become a safe haven for
every person who believes in The Conspiracy Of The Day, but his rather
confusing call-in format....west of the Rockies, East of the Rockies,
Wild Card Lines....*enough, already!*

Of course, what we need are GM's who will spend the time and money to
develop live, local talks shows, or a syndicator committed to a late
night talk program who's demos are not people with one foot into the hole.

Mike...
You're posting a plea for a new stint in the talk radio hot-seat.
Think VERY seriously before you get back into talk radio.
It's becoming increasingly stale and cookie-cutter predictable, with about 90% of the stations and hosts simply checking Rush and Newt for the latest party line and mouthing it almost verbatim 24 hours later. And if you look at the Arbitrons over the last 12 months, as reported for the top 50 markets in R&R, you'd have a tough time arguing it's a thriving, growing format...instead it's stagnant, and in many markets in genuine decline. You don't want to get on board the ship after it's already hit a rock.
Some of us go our own way, and we're still doing fine...but the format as a whole is in serious trouble, and no one with the power to turn things around seems to understand. It's just like the crisis that CHR went through some years ago, and AOR seems to be coming out of now...old programming ideas and outdated concepts, perpetuated by people who are now about to be left behind by the audience they're serving. Talk radio needs variety and new energy in the message it's sending, and the people sending it. I don't think it's going to get it, at least not in time. The stagnation we now see in the Arbitrons will turn into national decline, and when it does (sometime in 1995 or early 1996) it may be too late to bring it back. Throwing a few hours to blowhards like Dershowitz and Cuomo ain't gonna be enough.
Now, I admit a mixed motive for raising this...a mixture of general concern for the future of a medium I care about, and personal concern for preserving a very nice gig in a radio format that's been good to me for many years. The fates of both are certainly intertwined. But it isn't just my fate at stake, but the fate of a lot of professionals in the business (on and off the air) and the fate of millions of listeners who enjoy genuine give and take on the air, and who are frustrated at the increasingly predictable and scripted propaganda that's taking its place.
Bottom line...don't go back into this business unless you are prepared to try to shake things up...otherwise you'll be part of the problem and end up contributing to your own future unemployment.
I expect a lot of passionate, even angry response to this posting...that's OK. It means people are confronting the issues I raise here, and that's the first step toward doing something about them.

Bob Smith, middays WXXI-AM 1370 Rochester NY

Ever hear of Talknet? It was a very successful talkradio format from
1980 until a few years ago. NBC sold the idea to affiliates that it
could be placed *anywhere* in the schedule since it did not depend on
live clearances to be topical. Thus, Bruce Williams and Sally Jessy
Raphael became household names nearly in just a few months.

Contrast this was ABC's Talkradio format which was live talk requiring
live clearances, which bombed not long after its debut. Except for people
who listen to KABC, does anyone really remember Ira Fistell, Bob Aranson,
or Michael Jackson?

It depends on whether station management (or you) consider the job to be
more engineering, more promotions and public relations or more of a
publishing job. At National Public Radio, the person that does this job
is called, I think, "Producer, New Media Services."

# 624. WEXP (VT/NY) letters to the editor

Newsgroup: rec.radio.broadcasting
Date: 1995-06-29 00:00:00 UTC
From: ccb@together.net
Message-ID: <3sti0v$rjr@vixen.cso.uiuc.edu>
Source record: 30981

Here are two letters to the editor regarding WEXP's recent demise, which appeared in the June 28th edition of _Vox_.

Other pieces of feedback can be found at http://together.net/~ccb/wexpcond.htm

* * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *

Too good to be true. That's the way I felt about WEXP from the day I was hired last June, up until January 1995, when rumors of financial troubles at the station were revealed to be more than just rumors. (And my suspicion of too good to be true became, well . . . true.)

A radio station where jocks pick their own songs? Where an individual's creativity and input is tolerated-- even encouraged by management? No playlist? No rotation clock? No suit from out of town telling me what makes a good song set? What makes a good segue? When I should talk? What I should say? How I should say it? You've gotta be joking! Practically no one does radio that way anymore-- not even in a small market like Burlington.

But WEXP did.

Would Experience 105.1 have turned into a financial viable enterprise if it'd been given enough time? Many of us on the inside would like to believe so. (How many businesses-- radio or otherwise-- turn a profit in 10 months?) Perhaps many of our perspective clients shied away from WEXP because they didn't understand it. Maybe they were reluctant to join forces with the new and different, and instead put their money in the tried and true. (Frankly, who could blame them. Without solid numbers, any new radio station's a hard sell-- especially one as difficult to categorize as WEXP.)

But if the potential advertisers didn't understand, our listeners certainly did.

If I had a dime for every caller I spoke with over our short 10 months on the air who told me how refreshing it was to hear something different and unexpected on the radio, I wouldn't have had to hustle down to unemployment the day after our final sign-off. The people I spoke to night after night seemed to understand that a station that actually treats its audience as if it had a brain is somewhat rare.

Wouldn't it be exciting if the new WKOL (the station Hall Communications will resurrect out of WEXP's ashes) took as an eclectic and adventuresome approach to programming as WEXP did? I honestly hope they do, and perhaps they will.

Though I suspect that would be too good to be true.

Craig Bailey
ccb@together.net

Burlington, VT

* * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * * *

I was so disappointed to discover that 105.1 WEXP bid its final farewell last week.

I recently moved here and found it refreshing to tune in to a radio station that played such a unique selection of music. I feel fortunate to have been a WEXP listener, if only for a short while.

It's a real shame that something so pleasurable had to come to an end.

It was nice to find a radio station that didn't play the same songs repeatedly and didn't succumb to the typical, boring playlist which most radio stations are forced to use.

WEXP, you will be missed.

You were a fine radio station-- I only wish I could have experienced it longer!

## 626. Re: WPLM-FM Plymouth (Mass.) format change

Newsgroup: rec.radio.broadcasting
Date: 1995-06-29 00:00:00 UTC
From: <>
Message-ID: <3sti12$rju@vixen.cso.uiuc.edu>
Source record: 30983

Although I'm not particularly a fan of the music, the format change at WPLM is welcome. Diversity in formats is a wonderful thing.

What's not so wonderful is that Plymouth seems to have lost a local station. When I listened yesterday morning, they identified themselves as Boston's Smooth Jazz and gave Boston traffic reports. While stations like WBOS, licensed to Brookline, which borders on Boston, do this all the time, it is a stretch for a station so far away from Boston to use Boston as its identity.

If I lived in Plymouth, I might be a little upset. Then again, most of the ads and PSAs were for the Plymouth area.

I always thought part of the reason WBCN picked up Stern was to keep anyone else in the market from having him. Seems to me the person most likely to lose with having Stern on in the morning is WBCN's longtime morning dude Charles Laquidera. It seems unlikely that Infinity would shoot itself in the foot just to have Stern on in mornings. I agree that on the surface it does seem like a bad move to can a market legend like Shelton. How were his numbers? If I'm not mistaken, WZLX hasn't been doing that well lately.

# 629. Buffalo/Toronto Radio Watch(6/28):WUFX gets an Edge & more

Newsgroup: rec.radio.broadcasting
Date: 1995-06-29 00:00:00 UTC
From: ag365@freenet.Buffalo.EDU
Message-ID: <3sthvb$rhe@vixen.cso.uiuc.edu>
Source record: 31043

Reply-To: ag365@freenet.Buffalo.EDU (Carl K. Gorney)

Up & down the dial in the #40 market:

*WUFX(103.3 the Fox;AOR)is no more. Say hello to 103.3 the Edge.

After the sale of 'UFX and WGRF(96.9,97 Rock;classic rock)became offical a few days ago,'WUFX changed their format somewhat on Friday. After Ted Shred and Tom Ragan's morning show ended at 10am,the station played the R.E.M.track "It's The End of the World as We Know It" for 2 straight hours, then played the Pearl Jam track "Live" at 12 noon. That ended a major research project that new GM Charlie Banta said proved that there was a demand for this music in Buffalo. Almost the entire air staff was blown out:midday'er Iron Mike Bensson(the only jock to stay with WUFX for its 6 years),PM driver Meltdown,and overnighter Maxx Volume(both came over from WXBX,then known as Rebel Radio 14X with a hard rock format). Night jock Ed Banas(aka Mr.Ed) left 2 weeks ago.
New calls(likely with an Edge-like tone)are coming,as well as the move to WGRF's studios at 464 Franklin(not news to Business First or longtime r.r.b.'ers). Also,a new lineup of DJ's are coming:PD Vince Richards will handle the 3-7pm shift;Banta said that the station is looking for a night jock as well as a overnighter. Tom Calderone,who used to work at WBNY-FM (91.3)as its top dog(he later went to WDRE in the N.Y.City area,before going to Jacobs Media as a consultant-or one of those companies)is calling the shots for the Edge,and is doing 7pm-midnight for this week. Also coming is a local show,likely to be hosted by Rich Wall,who hosted WBNY's local show for many years.
Tony Violanti of the Buffalo News weighed in with his thoughts Tuesday,and was all over the Edge like the proverbial cheap suit;noting Calderone and the other changes made,he said,"Somebody pinch me. I must be dreaming." I'll be glad to volunteer,Tony,because you are dreaming.(And if I do pinch,it'll hurt for days. >:>) For T.V.'s information,I talked to Ted Shred while he was doing a personal appearance at an area auto dealer. He told me that he was as surprised as anyone at the switch;since 60% of the music that was on the Fox's playlist will be on the Edge's list(they just tossed out the AOR standbys and replaced them with modern rock standbys). He was also surprised that Maxx was tossed,because he felt he fit with what the station was doing. He also wondered if CKEY(FM 101 The Planet;modern hits)will lose out.
A local record rep quoted in Violanti's article says that PD/PM driver Kerry Gray turned off a lot of record people with his attitude and was "acting like an idiot." Violanti called Gray "an embarrassment who can't shut up between songs".(IMNSHO,Violanti _is_ an embarrassment. Period. End of story. Virtually every jock does this to some extent. Are they also embarassments,Tony?) 'KEY consultant Liz Janik says that the Edge is going for younger men,while the Planet is gunning for a broader base.(But,he's

got a point on tight budgets and internal dissension.)
A new TV campaign is under way.
More as it develops.....

-Jim Ranney is now at WGR(NewsRadio 55)as its midday/afternoon news anchor. No idea as of yet if it will include any street reporting duties. Ranney,who had been with WNED-AM(970,public,news/talk-which was WEBR up 'till 1993)stayed on when it shifted calls to WNED and released many staffers as it shifted from locally-done news(for the most part)to all-satellite news via NPR & PRI,among others. Before he left last Friday,he was local host for Monitoradio.

*On to other matters:
-Michelle Maloney has left WBEN(NewsTalk 930)to work as a reporter for Time Warner's R News operation in Rochester(which will head to 24 hours this Tuesday). ND Tim Wenger is handling airborne traffic duties for now.
-WBEE(92.5,Rochester;country)PM driver Coyote Collins adds MD duties;that was previously handled by PD Bob Barnett.
-Jon Allen,previously at WGNA-A/F in Albany as its PD,is now the on-air PD at WQIK in Jacksonville,Fla. Also,Bill Hunt is out at GM of WQBK-AM/FM (AM-1300;N/T;FM-103.7;album rock/Stern). Peter Baumann replaces him;he was the stations national sales director.
-Look for WPTR(1540;news/talk)to switch to a religious format soon. Crawford Broadcasting bought 'PTR from Albany Broadcasting for $750,000. Crawford owns Buffalo's WDCX(99.5),the flagship of its New York Network. (It also consists of WDCZ/102.7 in the Rochester area,and WDCW in Syracuse.)

TTYL...

# 630. Kansas City Radio Watch (27-Jun-1995)

Newsgroup: rec.radio.broadcasting
Date: 1995-06-29 00:00:00 UTC
From: transvox@interstate.net
Message-ID: <3sthvc$rhf@vixen.cso.uiuc.edu>
Source record: 31044

Written June 27, 1995

It's the first Mid-America Radio Watch of the summer!

* As reported in the previous Kansas City Radio Watch, talk station KCMO(AM) moved in with its duopoly partners in the Bonneville Broadcast Center in Westwood, Kansas, just across the state line from the Country Club Plaza. KCMO is sharing facilities with KCMO-FM, KMBZ(AM), and KLTH(FM). The move occurred Monday night, June 19, with the station's satellite talk shows fed to its Kansas City, North transmitter site by a voice-grade phone line.

* KCMO isn't all satellite talk. For several weeks, former alternative newspaper publisher Chuck Saults has been holding forth on a 9 pm to 12 midnight talk show on Saturday and Sunday nights. Unusual for talk radio in this day and age, Saults seems to favor a liberal point of view on issues. Some of the ads on the show can be unusual too; my favorite is a spot for a firm that sells used forklifts.

* A Kansas City talk show on computing is going national. The weekly *Christian Computing Online* broadcast its last show from KCNW(AM) in Kansas City, Kansas at noon on Saturday, June 24. The show will begin to originate instead from newly built studios in the exurban community of Raymore, Missouri, starting this Saturday at 2 pm Central time. It will be carried on another Kansas City-area station, according to the show's hosts; I suspect this will be KKLO(AM). The show does not preach, instead focusing on advice to callers on buying and using computer hardware and software.

* Lawrence, Kansas modern rocker KLZR(FM) is finally back at full power after a May 8 lightning strike fried the station's main *and* backup transmitters. The repairs appeared to have been completed last weekend. The station serves both a local audience in the college town and a rimshot audience of Kansas City listeners wanting an album-formatted modern-rock station.

* Farther south on Interstate 35, longtime oldies legend KOMA(AM) in Oklahoma City is now selling time to evangelists, starting at 10.30 pm Central time. The 50,000-watt Top 40 pioneer at 1520 kHz apparently began the late-night programming earlier this month. KOMA normally simulcasts KOMA-FM (but the format was on AM first!); according to on-air announcements, the oldies continue on KOMA-FM while KOMA is given over to preaching. Among the preachers is a South Carolina man who merely calls himself "Brother Stair--that's S-T-A-I-R" with alternating five-to-ten minute blocks of incoherent preaching and anonymous warbling of gospel tunes. This goes on *at least* for

two hours a night.

## 631. On the Road: Binghamton and Ithaca

Newsgroup: rec.radio.broadcasting
Date: 1995-06-29 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3sthvd$rhg@vixen.cso.uiuc.edu>
Source record: 31045

Last weekend took me down to Binghamton and Ithaca, NY -- and herewith
a few observations from those markets:

*Two new stations have hit the air in Binghamton since my last visit
there New Years' Weekend. The WSKG public radio/TV group has added
a second radio outlet to complement WSKG-FM 89.3 in Binghamton.
WSQX uses the old 91.5 frequency that was used in the mid-80s by
urban noncomm WUCI, which went out of business around 1989. Programming
is news and jazz, the news being mostly rebroadcasts of NPR shows that
aired earlier in the day on WSKG, as well as a few shows WSKG did
not clear. Schedule is limited -- 9am-midnight weekdays, noon-midnight
weekends. The signal is limited too, since they're using a short tower
just north of Binghamton, rather than the main tower farm southwest
of town in Vestal. Also new to the air is WMTT 100.5, licensed to
Conklin NY and transmitting from a site some 12 miles east of
Binghamton, I think in Windsor NY (though 90 minutes of driving the
dirt roads above Windsor failed to turn up the tower...which BTW
is shared with WKGB 92.5 Susquehanna PA). WMTT is known as "the Met,"
and programs classic rock. It's simulcast on WPHD 94.7 Tioga PA-
Elmira NY, which itself has a translator on 95.1 in the Elmira-Corning
area. Still not on the air are CPs WJIK 90.1 Binghamton, WRGG 107.5
Endwell, and a new one on 104.1.

*Tower visits this time included the nice 5-tower in-line array of
WENE 1430 in the hills above Vestal, and the FM site of sister
WMRV 105.7 in the hills above Endicott, across the Susquehanna
River.

*The Ithaca trip was limited to an afternoon, alas, but gave me a
chance to see the studios of WTKO(AM)/WQNY-FM downtown, which
I remember touring back when WTKO was a standalone AM and WQNY
was elsewhere. Saw an FM stick in the hills near rt. 79 west of
Cornell which I think was WYXL-FM (it was located on land belonging
to former owner Cornell University), and a 4-tower AM site
on a ridge to the south that I suspect was WHCU(AM) 870. Ithaca
is always a tough FM city, and there are numerous translators.
WVBR 93.5 is also on 105.5, WIII 99.9 Cortland is on 100.3 (that
one used to be on 107.7 a few years ago), WYXL is on 95.5, WPCX
106.9 Auburn is on 98.3, and WMHR 102.9 Syracuse is on 101.7.
FM Atlas also lists a WQNY translator on 103.1 and a WCII 88.5
Spencer translator on 96.3. I didn't hear the 103.1, but I think
I did hear the 96.3. Binghamton is also heavily translatored,
with WGRG 101.7 Owego on 102.5 from the tower farm in Vestal,
WKGB 92.5 on 92.1 from the Johnson City area, WSKG 89.3 on
89.7 in the Vestal-Endicott area west of Binghamton, and WPEL

96.5 Montrose PA on 93.3 in Binghamton and 95.9 in Endicott. WJIK 90.1 is slated to have a 104.9 Binghamton translator, and WPEL is slated for a 106.5 Binghamton translator. That one's not on the air; neither is WKGB's planned 92.3 Binghamton.

*Slimy non-ID award of the trip: Honorable mention goes to WIII 99.9 Cortland-Ithaca, which says "WIII Ithaca" at the top of the hour, but at least does a clear "This is 50,000 watt WIII Cortland, 99.9 and 100.3 in Ithaca" at :52 or so. The winner is WNKI Corning-Elmira, "Wink 106." These guys do an elaborate ID at the top of the hour that reads, "W-I-N-K Corning Elmira, Wink 106." The legit "WNKI Corning Elmira" is said very quickly and quietly in the middle of the :52 stop set.

*Tapes are of course available. Here's the lineup:

Scoped: (brief IDs and such from the Binghamton-Ithaca area and the drive back and forth from Boston): WHYN-FM, WACM, WBEC-FM, WBAZ (Long Island 3kw FM...heard on the Mass Pike near Lee!), WYSR (Rotterdam, not Hartford), WSRK, WQIX, WLIM (AM daytime DX from Long Island to Binghamton), WEMR-FM, WLSH(AM), WELM, WWCC(AM), WNBF, WSQX s/on, WSQX s/off, WSKG s/off, WSKG s/on, WEBO, WTKO, WLNL, WPIE, WELM, WNKI, WKXZ, WJIV, WCDA, WWCP, WMAS-FM.

Unscoped: WMTT 100.5 Conklin-Binghamton (45), WGRG 101.7 Owego with a Saturday night dance show (45), WYXL/WHCU Ithaca (WYXL is standard lite rock, WHCU was doing the weekend-morning Rudy Paolangeli big-bands show) (45), WICB/WQNY Ithaca (WICB is Ithaca College student-run, WQNY is classic rock "the Wave") (45), WIII Cortland-Ithaca (AAA) (45), WVBR Ithaca (Cornell student-run diverse rocker -- really neat station!) (45)

E-mail me to arrange a trade...

*And a final note -- I passed through Albany at midnight Sunday, just as WPTR was ending its era, and was not rolling tape. Anyone tape the WPTR oldies reunion????

## 632. New England Radio Watcher: WPLM goes smooth

Newsgroup: rec.radio.broadcasting
Date: 1995-06-29 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3sthve$rhh@vixen.cso.uiuc.edu>
Source record: 31046

*Apologies for my absence; spent a weekend in Binghamton and Ithaca NY, about which more in another post.

*The big news is on 99.1, a Boston rimshotter out of Plymouth, some 50 miles south. WPLM-FM made its name as a big-band station from 1961 until 1993, when it became ac "Variety 99.1" and went up against big Boston ac's WBMX 98.5 (hot ac), WSSH 99.5 (soft ac, Lowell), and WMJX 106.7. Never made much of a dent, and as of Sunday morning, they've flipped to smooth jazz, a format last tried here by Emmis' WCDJ 96.9, until they flipped to country WBCS under new owners Greater Media two years ago. "Smooth FM 99.1" is the tagline, and programming is part-live, part-satellite. WPLM(AM) 1390 continues to simulcast, though its signal is negligible anywhere inland.

*WZLX (100.7, classic rock) has parted ways with morning man Ken Shelton, who was part of the classic Laquidara/Shelton/Parenteau lineup for years on WBCN before moving to sister WZLX a couple of years back. Rumor has it that Shelton wanted the big (high 6 figures) money being made by Charles Laquidara over on WBCN, and argued that since his ratings were comparable, he deserved similar pay. ZLX's Chuck Nowlin is filling AMD for now. Some rumors have Infinity moving Stern over from evenings on WBCN, but that would break Infinity's promise to the FCC not to put Stern on any of the 3 Cook Inlet FMs (WZGC Atlanta, WUSN Chicago, and WZLX) when it bought them a few years back...and more importantly, it would no doubt eat into the numbers for which Laquidara gets the big bucks on BCN.

*WBUR is moving. The Boston University-owned NPR outlet is leaving its very cramped and dingy quarters in the School of Communications building at 630 Commonwealth Ave. for new space further west at 890 Comm. Ave. The move should be complete early next spring.

*WSBK-TV 38 is moving further from its local image. The veteran indie is now known on-air exclusively as "UPN 38."

*Back to the radio now -- the FM skip is finally rolling in tonight, and 96.5 (about the only really open FM channel for me) has been fun...

In article <3s62ne$gbh@vixen.cso.uiuc.edu>, mward@crl.com (Mike Ward) says:

>A note involving one of our regular contributors here on r.r.b./AIRWAVES -
>
>Mark Lennartz (MLennartz@aol.com) is moving to Portland, taking afternoon
>hosting duties at KEX-AM. His most recent gig was as morning jock at
>oldies KHYL-FM ("Cool 101") in the Sacramento market, a station he also PD'ed
>at one time.

Thanks for the info. As a Radiowatcher for Portland, I didn't hear the
word on that one.

For those interested in the market:KXYQ-FM has gone to Earth 105 with a
hit based classic rock format (though they don't use the word "hit" on the
air). Their aiming to fill a gap they see between 70's KXL-FM and
Classic Rock KGON-FM. They were a youngish AC, so the primary demo will
go from women to men. This figures to help KKCW.

# 634. Burlongton VT / Plattsburgh NY Radio Watch

Reply-To: jtymecki@aol.com (JTymecki)

WKOL, Cool 105 (formally WEXP, AAA), oldies, should resume broadcasting by the end of the week. Between the time EXP went dark on 6/15 and this week, WKOL has had a confluence of technical problems that has kept them from retuning to the air. Basically, C.E. Dennis Snyder just wanted to wait until everything was ready to go back on and that should be this week. Meanwhile, much support has come to the former announcers of WEXP with letters to the editors of local publications and TONS of e-mail. WEXP was the first station in the market with any sort of on-line presence and still maintains a page on the 'web. This page was crafted by Craig Bailey, the former evening announcer at 'EXP. To get an idea of what WEXP was like, visit them (or what is left of it) at

http://together.net/~ccb/wexp.htm

I am told that the network of DJ's is still strung together by (forwarded) e-mail at WEXP@aol.com or to ccb@together.net. Rumor is that the monthly Pink Floyd show that was produced by Craig Bailey and ran on WEXP called Floydian Slip, may be picked up by Champ 101.3.

Over at Classic Rocker Champ 101.3 (WCPV, AOR), they just ended a two week promotion of the 'The Champ gets Rich' with the aquisition of afternoon announcer Rich Haskell. Rich moved from afternoons at AOR rival WIZN (The Wizard) to go to Champ. WIZN night jock Mike Louoma moves up to fill the afternoon slot.

Speaking of the Wizard, WIZN still seems to be floundering a bit after losing the 'Coach,' (one-half of their morning team Corm and the Coach) after his resignation following pressure from the University of Vermont (where he really is a basketball coach). For the last several weeks, the new show of Corm (P.D. Steve Cormier) and the Rocker (who is Bill Corbiel) have had a long sucession of guest DJ's that range from the Governor of Vermont to ousted 95 Triple X AM drive co-host Lana Wilder. The Coach has even made a few guest appearances.

For an updated (as of 7/1/95) station list for the Burlington / Plattsburgh region, please drop me an e-mail.

Happy fourth of July...regards for now, Joe.

Irrelevant.

Radio stations that aren't newstalk, that don't do network news at the top
of the hour, (and even the ones that do do network news) only have a few
minutes to fill. TV has at least a half-hour.

>station but returned after a short time.

Leslie held the afternoon slot on WNBF for about a year, for three hours drive-time right after Rush and before the Dr. Dean show. The show got very hateful and lowdown before he was plopped in a two-hour morning slot.

WENE came back in August, 1994, in an all-talk format and a few months later, Leslie started his "World Radio Weekend" program which (as I forgot to mention earlier) airs from 8:00 to 11:00 am on WENE. The only reason it airs on WENE instead of WNBF (his former station of 20 years or so) is because WNBF could not get out of their contract with the syndicated car fix-it call-in program "On the Road" program with Jeff Brooks.

Supposedly, this is a syndicated broadcast on the Global Radio Network. I must say I've never heard of Global Radio and I've been trying to find others who may have heard this program outside the Binghamton, NY area. I am doubtful of this because of the incredible number of local spots and live reads Leslie does on this "national" broadcast...

[...]

This nice array would explain why 1430 WENE comes screaming through my modem speaker and cordless phone here in Vestal, NY. 1430 has had a consistenly better signal than 1290 WNBF.. at least the attendants at 1430 pay attention to their automated network equipment. 1290 can go for 15 minutes before anyone would notice the news warning tone at the top of the hour (can you imagine 15 minutes of once-per-second beeping? Beep Beep Beep Beep Beep ARGH!)

[...]

>not on the air; neither is WKGB's planned 92.3 Binghamton.

Ever since WKGB was translatored from 92.5 to 92.1 in JC, we've noticed more and more mystery repeaters. I guess it's more economical than using a 50k transmitter like the megapowered top-40-turned-classic-rock 99.1 does. As it turns out, after relatively low-powered WKGB 92.5 (classic rock) put in that repeator on 92.1 W221AX, they had reportedly demolished the huge-signaled top-40 99.1 WAAL station. And, in April of this year, after a year or two of ratings losses, 99.1 WAAL changed their format to classic rock with a small library (after doing that "classic cuts" four times an hour during their top-40 days). Honestly, it's much more convenient listening to the "new" 99.1 WAAL because their signal penetrates well into Susquehanna country (PA and NY) whereas 92.5 WKGB requires you to bounce between the main signal and the repeator on 92.1 while driving through Binghamton to Vestal.

Are your trends beyond being in the toilet? Are they so bad that you need to find them at your local sewage treatment plant? I'll do a successful Arbitron radio show for your station. In fact, I can also double-up as Production Director: Middays/Production Dtr. @ WLIR-FM, N.Y.'s original "Alternative" station; WDRE-FM (when they actually had ratings!) A.M. drive & production; most listened to AOR personality while @ WPLJ, N.Y.C. E-mail me: bobmarrone@delphi.com

## 645. Computer Radio Tuners/Recorders

Newsgroup: rec.radio.broadcasting
Date: 1995-07-01 00:00:00 UTC
From: Weatherboy ~ New York City <weatherboy@aol.com>
Message-ID: <3t282r$c1d@vixen.cso.uiuc.edu>
Source record: 30909

I saw an advertisement in a recent computer catalog and was
wondering if anyone had any opinions/ideas/success/failures
with this:

ADS Radio Rock-It RDS
...FM stereo digital tuner with specially-tuned bandpass
filters for low noise and crisp, clear high quality audio
output...audio capture lets you record your favorite
programs or songs even if you're not around when they
broadcast it...SRS 3D Stereo...RBDS receiver/decoder...
And your normal stereo-stuff like treble/bass/EQ/etc..

A few months ago there was a thread about "VCR"s for
radios...and was wondering if this was comparable.
It's priced rather high...$235.29...so I was wondering
if it was worth it. I'd also like to know if these
radio-tuner cards block out/filter interference being
created by the PC itself. My desktop PC generates a
ton of interference...especially between 97.5 and
100.3 FM...and was wondering if this type of card
is designed to block that mess out.

Thanks in advance for any input!

Weatherboy / New York City, New York

2 Sony 2916 Console $5000 each
1 PCM70 (Broken) Make an offer
1 Yamaha MJC8 8x8 midi patch bay Make an offer

Buyer pays shipping.
Contact scott_lawrence@dartmouth.edu for more information.
Descriptions below.

Soundcraft Series 600

32 CHANNEL STRIPS----------
*Phantom power, Pad, Line, Mic, Gain
*EQ)LF cut, HF, Hi Mid (0.6-10K), Lo Mid (0.15-2.4), LF, eq on/off,
*Aux 1, Aux 2 (1 and 2 w/ selectable pre/post), Aux 3 or 4, Aux 5 or 6,
34 or 56 switch-All aux's with level
*Pan
*Buss switches (Mix, 1-2, 3-4, 5-6, 7-8)
*Channel on/off w/ LED
*Solo, Peak LED, Fader
MONITOR STRIP----------
* AUX OUT) levels for 1-6 w/ AFL switch on each (solo)
*Oscillator level, 10K, OSC Slate
*TalkBack mic, level, T/Back
*MONITOR) Studio level, studio on/off, 4 selectable stereo ins, C/Room
(level, mono and DIM)
*Fader
*Headphone Jack
GROUP and TAPE RETURN STRIPS----------
*16 Tape returns w/ HF, LF, Aux 1, Aux 2 (Aux selectable pre/post),
pan, vol, on/off w/ LED, PFL
NOTE: I think that 9-16 are selectable between what they control
because there's a button which says tape return but the section isn't
divided from the buss section.
*8 Busses w/ same controls as tape returns and a fader
CONNECTORS----------
*32 Channel ins (XLR's and 1/4 balanced)
*32 Channel direct outs (1/4 balanced)
*32 Channel inputs (1/4 balanced) (insert return I believe)
*16 Tape returns
*16 MON inputs 1/4" balanced?)
*8 Group Outs (XLR's)

*6 Sends (1/4" balanced?)
*8 Group inserts (1/4" Stereo)
*3 2trk ins (1/4")
*Control Room Out (1/4" balanced)
*Studio Out (1/4" balanced)
*Main out (XLR)
*Main Inserts (stereo 1/4"?)
NOTES: This mixer is about 10 years old. Some of the button labels are worn off but it's still clear (or easily determined what they are used for) It sold for around 7000 new and I've seen them being sold for much more than the price listed above. The power supply is included.

Here's a description of one Sony 2916 Console
They haven't been used at Dartmouth. One is new and the other refurbished (looks new to me).

Strips:
8 mono
1 stereo
1 return
4 group
1 talkback/oscillator
1 monitor
4 open

Connectors---------------
45 pin for each strip
3 editor
a few unidentified ones
--------------------------
Meter Bridge
Tools
Power Supply with connecting cable
Power Cable
Fuses
Bunch of 45pin solder sockets w/ clip and lock shells

8 MONO-------------------------------------------------------------
*IN) Phantom, Pad, Phase, Line, Mic, Gain, Solo (line, mic, eq, channel)
*EQ) High, LF, Sweep Mid (150-5K), on/off
*SEND) 3 sends, one w/ balance knob, all w/ selectable pre/post
*MISC) Balance, solo, local, Buss (1-2, 3-4, Mix), VCA group buttons (L, 1-4), PFL, Fader.
1 STEREO-----------------------------------------------------------
*Same as mono strip except the IN section has buttons for IP1-3
4 GROUP------------------------------------------------------------
*Same as mono strips
1 AUX RETURN-------------------------------------------------------
*3 returns w/ mute, level, return 1 is stereo.
*St. B level w/ Sep button

*REH, ON AIR buttons

Notes: All connectors must be made with the direction of the manual for pin outs unless you have a machine which will interface directly with the mixer. The mixer has a nice layout and a great meter bridge. It is a console style mixer but the knobs have been staggered instead of set up linearly.

PCM70 (Broken)- It turns on. The display works fine (you can go through all of the menus, etc.). The input works fine. There's something wrong with the output but I'm not sure where. It could possibly be fixed for a cheap price for all I know but no one here wants it anymore.

It may call itself "Boston's Smooth FM" but what you hear is coming from a
satellite. "Smooth FM" is a trademark of SW Networks, which feeds a bunch
of stations the same music feed that WPLM gets. Computers at the local
stations inject local content where appropriate.

Tom: Our company has been working on a "Sonicfax" project that allows audio to be sent from one station to another just like a fax is sent from point to point. It also is designed to include a means of writing the file out to the internet, AOL, CompuServe etc. We decided that the best way to do it was with compressed .wav files because there is so much technology out there that can recover them

# 651. CLT Buys Stockholm Frequency

Newsgroup: rec.radio.broadcasting
Date: 1995-07-01 00:00:00 UTC
From: johan@topp40.se
Message-ID: <3t2831$c1u@vixen.cso.uiuc.edu>
Source record: 30915

One of the ten commercial radio frequencies in the Swedish capital Stockholm has been bought by CLT Multi Media. The prior owner of 104.7 MHz is Radio Q, a 50 percent talk/50 percent music station that has targetted female listeners over the age of 25. Radio Q will stop broadcasting Friday June 30th, after 20 months on the air. Luxembourg based CLT is one of the biggest media conglomerates in Europe, owning several radio och television stations all over the continent.

STOCKHOLM

Frequency Station (Format) Owner • Daily listening in percent of potential audience

Public radio
92.4 SR P1 (N/T/Culture) - 16.0
96.2 SR P2 (Classical/Jazz) - 3.8
99.3 SR P3 (CHR) - 14.9
93.8 SR P4 Stockholm (AC/Schlager/Gold/Education/Local) - 13.6
103.3 Radio Stockholm (Hot AC/Local) - 24.7
89.6 SR P6/Stockholm International (Minority/International) - 0.1

Commercial radio
101.9 P6 (AC) Kinnevik - 3.7
104.3 Megapol(AC) Bonnier - 7.3
104.7 No name (?) CLT, Luxembourg - X
105.1 NRJ (AC/CHR) NRJ, France - 13.7
105.5 Bandit (AOR) Bonnier/Tom McAlevey - 2.6
105.9 Nya Radio City (Hot AC) SBS(ABC)/Svenska Dagbladet - 7.1
106.3 Classic Radio (Classic) Kinnevik - 0.8
106.7 Klassiska Hits (AC) Classic Hits,Ireland - 3.1
107.1 Vinyl 107 (Gold) Bonnier - 3.2
107.5 Classic FM (Classic) Classic FM, UK - 1.1

>actually make a decision on this issue.

The FCC was hoping to have a report and order out by the NAB
convention in April. One staff member I spoke with who was working on it
got sidetracked to working on a proposal for new rules on modulation
measurement. I really expect to see another NPRM, as I don't think the
new proposed rules are close enough to workable.
The FCC did have the NPRM at their web site (http://fcc.gov/),
but it appears to be gone now. I'll try to take the time to put it on my
web site (http://slonet.org/~hhallika/). The NPRM IS available on our
fax server at +1 805 541 0201.
Finally, I did have a couple articles in Radio World on the
subject. The first evaluates the NPRM. The second evaluates the
comments that were filed on the NPRM.
I'll drop another note to the FCC to check the progress. I'll
let you know what I find.

Source record: 30920

WCHSNews@aol.com wrote:

[On WHP 580's Signal]

Sorry. I didn't make myself clear. Yes, WHP's night signal is horrible. It is directional to the SE. If you live in Lancaster, Gap, etc. in the PA Dutch Land you can get WHP all the time, but if you live in other areas, good luck getting WHP *at night* unless you are very close to the transmitter.

WHP's day signal is a different story. It can be heard from Bedford, PA all the way to Philadelphia and form Lock Haven, PA to Washington, DC (yes it is hearable even with WTEM on 570).

What I was trying to get at in the post and didn't was that WCMB 1460 AM where Don and Mike are now has a bad signal day side and worse at night. What I meant was that its too bad Don and Mike can't be on WHP because of their day signal.

Sorry for the confusion.

## 659. New England Radio Watcher: WUMB, WLYT

Newsgroup: rec.radio.broadcasting
Date: 1995-07-01 00:00:00 UTC
From: Scott Fybush <fybush@world.std.com>
Message-ID: <3t2824$bt1@vixen.cso.uiuc.edu>
Source record: 30987

*Boston's number-three public radio outlet, UMass/Boston's WUMB 91.9, is making some changes to stay CPB-qualified. Starting Monday, WUMB will join WGBH 89.7 and WBUR 90.9 in carrying All Things Considered. 'GBH carries the show 5-6:30pm, 'BUR carries it 5-7pm, and 'UMB will carry the West Coast feed from 7-9pm. Until now, WUMB has been essentially all music, with folk during the day and "Quiet Storm" urban at night. But the station hasn't been meeting the minimum audience requirements for receiving federal money, so they're adding ATC in hopes of bringing more listeners over from WBUR and WGBH. WUMB simulcasts on WBPR 91.9 Worcester, and will soon add WFPB 91.9 Falmouth on Cape Cod. My take: What a waste! Two simultaneous ATCs are enough, and there isn't anyone in Eastern Massachusetts who can't hear the show on WGBH (with its 100kw grandfathered signal) or WBUR (with its main class B signal and its 3 satellite signals on Cape Cod). If we really need a delayed feed, why can't WGBH give us something else at 5 (hint: there's no jazz on the radio at that hour locally!!!!), and then have the delayed feed on GBH at 7? Or, better yet, why not wrest one of the three stations from the CPB-NPR orbit and give the Hub an independent, locally-run, community station. Just a thought...

*Meanwhile, not much further up the dial, WLYT 92.5 in Haverhill (30 miles north of Boston) has been quietly edging closer to a AAA format. They've dumped the "W-Lite" slogan, and are ID'ing just with calls and frequency. And the music is moving away from generic soft rock and towards the Shawn Colvin-heavy sound of WBOS 92.9. Perhaps 'LYT is setting itself up to grab audience if WBOS changes format? In any case, despite a weakish signal south and west of Boston, it's become quite a listenable station.

## 660. Phoenix: Foxx Fired as KHOT PD

Newsgroup: rec.radio.broadcasting
Date: 1995-07-01 00:00:00 UTC
From: Michael_Hagerty@azfamily.com
Message-ID: <3t2826$btb@vixen.cso.uiuc.edu>
Source record: 30988

One week after GM Kathy Lawrence was shown the door at KHOT(100.3)/KEDJ(106.3)/KGME(1360), KHOT PD Carla Foxx has been relieved of her PD post and midday talk show.

Thursday(6/29's)editions of the Arizona Republic quote Foxx's agent, Chris Ryan as saying Foxx has been offered a nighttime talk show.

Lawrence hired Foxx away from a 7-year run at AC KESZ(99.9) to program what was then Heavy Metal KZRX. On March 16, the station changed format and calls to Hot Talk KHOT, with Howard Stern in morning drive, National Enquirer gossip columnist Mike Walker and Foxx in middays, and Tom Leykis afternoons. The station also carries Susan Loggins, "Love Phones" and Tom Snyder.

It was Carla's first PD gig, although she'd been MD previously at KESZ.

There is no word on her replacement, or on whether owners Resource Media will tune up the format or bail out. Even with Stern simulcast on KHOT and KGME, the numbers are only good enough for 17th place 12+ in morning drive.

# 661. SD Radio Watcher Report 6.28.95

Newsgroup: rec.radio.broadcasting
Date: 1995-07-01 00:00:00 UTC
From: San Diego Radio Watcher <chris@terminus.wccs.saic.com>
Message-ID: <3t2827$bte@vixen.cso.uiuc.edu>
Source record: 30989

Here's the latest from San Diego!

More Mercy! Mr. KFI kicked off his weekday gig with Wolfman Jack on Monday. The one-hour promotion for Wolfman's book, "Have Mercy!" was full of stories that mainly focused on his California connections

Rumors: XETIN [540, Tijuana, Mexico] is moving from espanol talk and joining forces with KOJY, Costa Mesa in the AP "All News" format. The newscast are to include Orange and San Diego county news in the broadcast.

The problem noted with the 540 signal is the same here in San Diego County: the null north is to protect the Costa Mesa station, and as such, the only effective area is around SD proper and points east.

KPRZ [1210, San Marcos] has jumped into the superhighway: e.mail address is KPRZradio@aol.com. This is the station that former-KFMB Mark Larson went to after last year's shakeup at 760 AM. The Christain talk station has improved ratings wise since his arrival as GM.

Web page correction: the Web provider for my page has changed the address of my homeboy page: http://www.geopages.com/RodeoDrive/1102/ I'll be out of country for two weeks, enjoying the sand and more sand of the mid-East in my yearly reserve duty. All e.mail sent will be answered, but expect a five to six day digital delay.

# 662. Burlington VT, Plattsburgh Update - WCFE

Newsgroup: rec.radio.broadcasting
Date: 1995-07-01 00:00:00 UTC
From: jtymecki@aol.com
Message-ID: <3t2828$bti@vixen.cso.uiuc.edu>
Source record: 30990

Reply-To: jtymecki@aol.com (JTymecki)

Radio Watch Update:

WCFE, Mountain Lake Public Radio (91.9) and Television (CH 57), has apparently laid off 6 of it's 38 employees. This is coupled with the rumor that the radio side will no longer be running any national programming (i.e. NPR). As of today (6/29), WCFE-FM is still running Performance Today, a live classical music program from NPR. WCFE has long lived with public broadcasting neighbors Vermont Public Radio and Vermont ETV from across the lake, but given the cutbacks in federal funding plus a deep cut in money from the State of New York, it was apparently too much to avoid lay offs.

For an updated list of stations in the Burlington VT, Plattsburgh, NY region, drop me an e-mail.

Have a happy 'Fourth...Regards, Joe. jtymecki@aol.com

I really don't think we should get into content regulation, even
if it means no more infomercials! Content regulation is content
regulation, and we should be moving towards more first amendment rights
for broadcasters, not away from it.
If we want to change the protection ratios for AM stations or
increase the size of the protected countour, let's change the rules to do
it. Stations going dark or making changes would then have to comply with
the new specifications.
This is also what is supposed to happen (eventually) with the
expanded AM band, moving the stations causing the most interference to
the new band.
Finally, it seems that stations could "move away" from
interference by running single sideband with carrier, such as Kahn's
PowerSide. This would reduce interference for both stations. Anyone on
the group using PowerSide?

From: radiobzz@aa.net
Message-ID: <3t282a$bud@vixen.cso.uiuc.edu>
Source record: 30992

Since any of you are in business, can you tell be what happened to the
FCC idea of a few years ago to close the AM bandwidth from 10 khz to
9 khz and explan to 1710. The idea was to make more room for the growing
free market of radio. With more and more AM station going talk from music
wouldn't this idea work, without much loss of fidelity? And would this
"compacting" ease the congestion now found on AM. While I'm at it, Europe
uses Longwave for news and information, why isn't it used here in the
America's.
Thanks
Buzz

Yep. There may even be situations when this type of operation will give listeners and advertisers better service than what they have now...

...but a lot of the people who go from live to satellite/automation will lose big time. Cost-cutting does not always lead to a healthier company, especially in a business like radio where relationships with people (listeners and advertisers) are critical. To the extent that technology strengthens those essential relationships, it is beneficial; otherwise it's a dangerous mirage, no matter how much money it promises to save you.

Remember, the guys with the lowest costs are in their graves.

IL>suspicious, but this seems weird..

Lance,
Let's put a different spin on it. I'd say she's got a brilliant promo person who understands the value of the "Information Superhighway." You can't fault the person for using whatever vehicle he can to promote airplay for his client.

I does seem a bit of a stretch to ask the writers to say they enjoy the station from 3,000 miles away, though. Since we see such things regularly in advertising, I guess we can suspend our disbelief for a while.

Rich

This should really be commented on by those who have started NCE
stations, but I thought I'd remind readers that part 15 of the rules has
a provision that allows unlicensed AM stations OF ANY POWER on a campus
PROVIDED the radiated field meets the limits of part 15 AT THE CAMPUS
BORDER, and no interference to a licensed station is caused. As such, it
may be possible to have a low power AM station actually radiating instead
of driving power lines (as in carrier current). Check the rules
carefully and get out the field strength meter!
Licensing an FM NCE station can be done, but in many areas all
the channels are taken. The FCC is no longer granting new class D
stations (10 watts TPO), so a class A (3 KW typical) would be required.
Again, the trick is to fit it in.
Another possibility is cable FM. Check with your local cable
company. The college where I teach at night does have a cable FM station.

Good Luck!

Harold

## 670. Open Letter to Fred Weinberg

Newsgroup: rec.radio.broadcasting
Date: 1995-07-01 00:00:00 UTC
From: EDITOR@airwaves.com
Message-ID: <3t282g$bvc@vixen.cso.uiuc.edu>
Source record: 30998

Since repeated attempts to reach Fred Weinberg via email have failed, I must reply to him here in this newsgroup. At first I had created an article taking his latest salvo, point by point, and offering my reply. I have decided not to publish that article because to do so would be to accept Mr Weinberg's challenge to a fight, which I have no intention of furthering in this forum.

Fred:

I don't know what possesses you to consistently call names, make accusations and come across with a chip-on-shoulder attitude toward anyone who dares to hold a position contrary to yours vis-a-vis radio regulation/duopoly/etc. But in almost every case, you devolve into name calling (the most recent terms include schmuck, snot-nosed, holier-than-thou and repeated use of terms like whining') and such.

Nobody is dictating how you should run your station. Nobody is going to come to Tulsa and take your stations away from you. This is Usenet, not the FCC, not the NAB... just Usenet. Just people talking over issues of importance. Fred, you miss no opportunity to flame posters that hold to opposing opinions. Yet your arguments generally rely on inflamitory rhetoric, condescension and personal insult. Often you compare apples and Cadillacs in making your point and repeatedly speak of not being willing to "lay down your liberty" because of "a bunch of snot-nosed [so and so's] who have never owned a station... etc etc". Again I assure you, Fred, that your liberty, and your stations are not in jeopardy because someone posts an opposing view to Usenet.

You accuse me of being 'holier than thou' and yet in your own articles you bulldoze forward with arrogance against any who dare hold an opposing view. Then you make 'preemptive strikes' by suggesting that I would censor you because you make statements that I disagree with. By doing that you sway the issue away from your aggressive and insulting manner toward the content of your opinion and suggest that if I don't run your flame, that I am censoring free debate. Fred, if I were a censor most of what you have already posted would not have made it to print. You know that, but you ignore it because it makes for good ammunition. I *DON"T* censor anyone because of differing opinions... period.

Interestingly you have been published with words that others have been refused for, simply because you are a strong voice of opposition and that I felt you should be heard... NOT because of your accusations of censorship or other threats.

As I wrote in my private letter to you, I get many email messages asking why I allow you to get on this group and flame people who have legitimate concerns about the future of radio in the face of current trends. At least one regular poster has thrown in the towel because of your insulting replies both in the forum and in private email. I find that unacceptable. Another reader who knew your father and you, has told me "...not to waste my breath talking to you....". But I believe in doing everything I can to bring about understanding rather than fighting. I don't consider it a waste of time talking to you. You certainly have accomplished a good thing with KTRT, whether I like the programming or not is immaterial, you have created something live, local and (presumably) profitable. Bravo (and I mean that).

You, as well as anyone else, can come on here and express your opinions on the issues, offer counter-points and make your case. But you have no right to come on here and flame people as you do for having differing opinions. In my recent article where I condemned your position of "I don't run radio stations for [presumably] the listeners" I took great pains to make sure that my meaning was clear and that I was taking strong issue with your "stated opinions" and not with you personally. And that "opinions such as those stated by Fred were at the core of the ruination of radio". I never said FRED was at core the ruination of radio. Again you ignored that and claimed I had made a personal attack on you. I did no such thing.

You made vague references that I, and others, were trying to make a situation where you would go broke, or that we didn't want you to make money. I, and no other poster, had said anything of the sort. I had taken issue with your condescending attitude toward the posters on this group who differ from your position. Those kinds of statements are all smoke screens.

Fred, you are welcome to debate issues here in a rational manner. You can offer all the evidence to support your point that you wish. But you are not welcome to come in here, guns blazing, and brow-beat people with pejorative and childish name-calling, and insult them because they differ from you and your opinion. If you are so sure of yourself, as you seem to be, then let the opposition have their say, let them talk about their concerns without you calling them 'snot-nosed' and 'whiners'. That kind of approach indicates that perhaps you are not so secure in your position and feel the need to denigrate contrary opinion and concern. Either that or you are just spoiling for a fight.

I have always praised and applauded you for your apparent success in breathing new life into dead or dying stations. While I am on the record as not being too thrilled with duopolies, I have also publicly stated that "... if duopoly has any good purpose it is the sort of purpose that Fred Weinberg has put it to with KTRT/KBIX". I have never tried to steal your thunder, instead I have hailed your successes there. However, at the same time I condemn your attitudes here on rrb as unnecessary, insulting and in opposition to free

debate.

I only wish you could discuss things here with a little less macho posturing and understand that nobody is ever convinced by being beaten over the head. Rush has said that many times on his show. You only convince people by offering compelling evidence and doing so in a credible and non-threatening manner. There is no need to be so arrogant here, Fred. We all want to hear what you have to say... just try to keep it at a level where people don't have to run away with their ass on fire.

I think that's fair.

*IN GENERAL*

In the interests of sanity, I will no longer be posting articles that call names or flame people *personally*. If a poster (not just Fred, anyone) cannot make their points by arguing *in favor* of their position rather than just cutting the opposition down, then perhaps they are not so sure of themselves after all. If Fred, or anyone else, wants to fight, let them do so in email or elsewhere... not here.

As Rush Limbaugh has said so many times...

"We have conversations here... Not shouting matches."

In the interest of fairness, I will post one more round of responses to this thread (if any) and then call it closed so we can get back to doing radio again. I hope Fred and I can get back to an even keel too, but that is up to him, not me.

BTW, get that in-bound email working Fred...

> What I meant was that its too bad Don and Mike can't be on WHP because
> of their day signal.

> Sorry for the confusion.

WHP-580 has a six-tower array (two rows of three, or perhaps vice
versa) which can be seen from I-81 while driving west of Harrisburg.
I don't know how many of these towers are used in the day, but
presumably all six are used at night.

(I notice that WCHS in Charleston, West Virginia, which operates on 580
using four in-line towers on a hill west of Charleston to generate its
nighttime pattern, has thrown in its two cents about the signal of its
co-channel competitor!)

If you go back far enough, WHP was on 1460, and WCMB was a daytime station
on 960 licensed to Lemoyne PA. When WHP applied to move to 580 (the
signal was an improvement on that frequency, even with the six towers),
WCMB applied to move to 1460 and add nighttime operation. Eventually they
were re-licensed to Harrisburg, and WHYL Carlisle got the daytime 960
frequency. I think WHYL now has a marginal nighttime signal (one of those
pointless FCC post-sunset grants) with something like 27 watts!

A large part of my heart and soul is missing. My good friend and hero Bob Smith, who I and everyone else just refered to as "Wolf" passed away yesterday morning after flying home from his final show in Washington D.C.. He had just walked up the steps of his home in Belvedier NC and hugged his wife Lou (who he always refered to as WolfWoman) and then collapsed. The official cause of death is a massive heart attack... but in my opinion, you can't still a heart as big as that.

God, I miss him so much already. He was the sweetest man in the world, always with a smile, a handshake or a great big bear hug for everyone around him. As we left Planet Hollywood Friday night, I gave him just such a bear hug... and I can still feel his warm embrace. I'm sure that anyone who ever listened to Wolf will always feel the warmth of his embrace. He was that way. He radiated a warmth and sense of comraderie to everyone who ever heard him, and contrary to reports, the Wolfman has not been silenced. He will never be silenced, so long as we hear him howling in our hearts and souls.

I love you Wolf. More than I can say. I'll miss you for all my days. I have in my possesion the last book Wolf ever signed. "Your friend always" he wrote... More than you know Wolf. More than you know.

I'd love to hear from anybody who loved Wolf. If you knew him, or were one of his great listeners who lived the lunacy and fun from the days of XERB to Planet Hollywood on Friday night... please write me at WildWes9@aol.com. It's like Robin Williams said in "The World According to Garp"; "Right now, I just want to be with as many people who feel the same way I do."

Wolf was on-line at DaWolfShow@aol.com. You can send messages there, if you'd like, or to Howler HQ@aol.com.

Take care,

Wes Johnson

The radio world's suffered some big losses this year, and now
we hear news of one of the biggest losses yet...Wolfman Jack, the
legendary radio personality who rocked North America for almost
the last 40 years, died this morning (July 1) at his home in North
Carolina. He was 57, and had just gotten home from a multi-city
tour in support of his newly published memoirs (which have been
very favorably reviewed).
He first became known for his pioneering work as a rock radio
personality from those mega-power border stations that blanketed
the Southwest, and later from stations in California and from WNBC
in New York. But he also became a visible symbol of rock in the '70s
from a featured role in American Graffitti, and later as host of the
NBC "Midnight Special" show. At the time of his death he was
still doing a weekend solid gold show based out of Washington, DC.
He influenced all of us who became air personalities later on,
regardless of format...we're more spontaneous, creative, and free
because of what he and other pioneers did, whether we're doing
rock or talk. He will DEFINITELY be missed....

1995 has been a rough year. It started with the passing of
Byron McGregor, who set the style and tone for the way we pre-
sent news on the air today. Then we lost Howard Cosell, who
not only changed the way we report sports but established a new
standard for honesty in broadcasting. And now we're saying farewell
to their style-setting counterpart among air personalities, Wolfman
Jack.
We're saying goodbye this year to people who influenced and
shaped a lot of the best of what we do. I don't know what's worse...
the fact that men like these are passing from the scene far too
soon, or the fact that psychos, over-age juveniles and yahoos like
Liddy, Stern and Limbaugh are trying to take their place.
Bob Smith, middays WXXI-AM 1370 Rochester NY

# 675. GOODBYE, WOLFMAN JACK... from Herbie

Newsgroup: rec.radio.broadcasting
Date: 1995-07-03 00:00:00 UTC
From: jmarch@wheel.dcn.davis.ca.us
Message-ID: <3t7ohs$fi5@vixen.cso.uiuc.edu>
Source record: 30803

I was saddened this morning to learn of the death of Wolfman Jack. A report filed by the L.A. Times wire service said he died Saturday (July 1) of a heart attack at the age of 57.

Spanning three decades, I was a "correspondent" of Wolfman's--having periodic on-air conversations with him as a character I called "Herbie." Herbie first surfaced in the fall of 1966, when I was a college sophomore and the Wolf was howling on XERB (1090 kHz, Rosarito, BC, Mex.). Not only did the Wolf good-naturedly put my bit on the air, but he installed the cheerful Herbie as a recurring character. Pretty heady stuff for a college kid enamored with radio and aching to get on the air.

Wolfman suspected that Herbie's Mexican accent wasn't authentic, but that wasn't confirmed until he called my home one evening in 1967 when I was out and my mom (who died two years ago, bless her) answered the phone. When the Wolf expressed surprise that "Herbie's" mother didn't have an accent, my mom innocently responded: "My son? No, he's part Jewish and part Italian." Truth is, a Mexican accent was the only one in my repertoire. I'd have loved to do a credible Italian or Jewish accent, but even today--29 years later--I still don't have either of those down.

Herbie also appeared in the late '60s via Al Collins' Purple Grotto on KFI, but Herbie sank out of sight after I graduated from college and began my own career in radio, publishing and marketing.

Then, just this past spring, after chucking "employee" status and starting my own business, I decided to renew contact with the Wolfman (which I did via this newsgroup, thanks to you folks.) Earlier this year the Wolf graciously welcomed Herbie back on his Friday night satellite-syndicated oldies program, and we did a number of bits on-air. I've been too busy the past several weeks or so to call him, however, and was so sorry to know that a conversation we had back around April or May was our last.

Two questions:

1. Can anyone provide the snail-mail address of Wolfman Jack Entertainment? I'd like to send a message of condolence to his family.
2. I'd like to get word to Don Imus how much now, in retrospect, I appreciated the eloquent timing of his on-air interview with Wolfman just the week before last. Wolfman, ironically, had just published his autobiography, called "Have Mercy--the Confession of the Original Party Animal." I don't have a Broadcasting Yearbook to look up WFAN. So if you see this, Don--Thanks.

And so long, Wolfman. I'll miss you.

You know how every once in awhile something happens that you regret for a long time after? A week or so ago Wolfman Jack appeared on CBC television's News World evening phone in show promoting his autobiography. After a short interview by the host they started to take calls from viewers across Canada. I was going to call in myself, but I was so interested in the piece that I just never bothered. I wanted to tell him how much I loved every show I ever heard him do. How I used to hear him on WNBC when he did his stint there, and how I'd forego listening to local radio many evenings to drag 660 out of the static crashes just to hear what he was up to that evening. How I loved "American Graffiti" largely because of his presence. And how, while I was working in a format different than what he was working, he was still an inspiration to me because he showed what it was to be a true personality and how to entertain an audience.
I didn't make that telephone call to the phone-in show that evening, but I wish now that I had.
I'll miss the Wolfman. With his passing, an era in radio broadcasting has also ended. No one, but NO ONE, can replace him, and there isn't another radio personality anywhere of whom I can say that.

I am very saddened to hear of the untimely passing of radio's great
legends, Bob "Wolfman Jack" Smith. He was an idol of mine ever since I
saw "American Graffiti" back in 1973. I wanted so much to be like him,in
in my younger days...listening to him on 66/WNBC every weekend and on
Saturday nights (6 to midnight) on WROR/Boston on "The Golden Great, 98 !"
If I was ever "blue", the ol' Wolfman made my day.....howling and prowling !
He was amazing to this day. I always wanted to meet the man, something that
I never had the pleasure to do so.
I was aware that Wolfman was not in the best of health over the past
few years, nontheless he kept on doing personal appearances and his radio
show....which went satellite last year. He was radio's exciting renegade
broadcasting from such "border blasters" such as XERF (1570 kHz/250,000 watts)
in Ciudad Acuna, Coahuila (just right across the river in Del Rio, Texas)
and XERB (1090 kHz/50,000 watts) in Rosarita, Baja California Norte (just
south of San Diego). His voice was known far and wide. A friend of mine
used to listen to him on XERB while he was stationed in Montana in the
1960's and had a ball enjoying his "who's this on the Wolfman telephone ?".
He made everybody learn to NOT take themselves soooooo seriously. His
"rusty razorblades" voice was many times imitated...but NEVER duplicated.
He WILL BE MISSED. This writer will especially miss him dearly. Salud
amigo !

In 1965, I moved from upstate New York to Southeast Iowa to go to college. My first weekend on campus was a social bust (cornfields? what are those?),so I laid down in the dorm room, turned on the radio which was tuned to a local 250 watter daytime on 1570 Khz. Imagine my surprise as good ole XERF in Ciudad Acuna/Del Rio came blasting in - my first time. I can't recall the song playing other than some r&b song - in the middle of the song the most unearthly howling started up. I turned the volume up to see what was going on and spent my first weekend in the cornfields of Iowa listening to the "X" 'till 4 in the morning. Even the top-of-the-hour ID's were strange - some fellow would come on and say ..."Can you hear us? This is XERF Ciudad Acuna, Coahuila, Mexico. As the note at the end of "The Buddy Holly Story" says, ...the rest is rock and roll!".

I never was able to hear the Wolfman on XTLA or XETRA in the '70s but was an avid viewer of the Midnite Special when it was on.

One of the pioneers of rock radio! Without him, the airwaves in the '60s and 70's would have been a lot more boring. He was in the ranks of Alan Freed, Dick Biondi, Russ Siracuse, Cousin Bruce Morrow, and others -

My condolences to friends and family and the broadcasting world in general.

I have just heard the terribly sad news that Robert Smith, aka Wolfman Jack, is dead of a heart attack at age 57.

Wolfman is/was one of my inspirations, although I would never even attempt to sound like him. But he was one of the greatest entertainers our medium ever produced, a true showman who understood the power of radio to fire the imagination.

In 1973, I bought Wolfman's syndicated show for WKAL AM/FM in Rome, N.Y. The idea of putting local drop-ins into a syndicated show, so common now with satellite-delivered programing, was new then. We even had Wolf doing local weather forecasts. I'll never forget the first night we put him on the air, the parking lot of the station filled within 15 minutes with people wanting to meet him...and of course, everything was on tape.

I'll miss him terribly.

## 682. Clap for the Wolfman...

Newsgroup: rec.radio.broadcasting
Date: 1995-07-03 00:00:00 UTC
From: deejay@mm.com
Message-ID: <3t7oi2$fie@vixen.cso.uiuc.edu>
Source record: 30810

Just heard that Wolfman Jack died of a heart attack today. What a loss. What a talent.

I had the fortune to meet Wolfman when I was working in Tokyo as a young disc jockey in 1976. Knowing somebody who knew somebody else, I got to be present in the studio (along with about a dozen other people) as he tripped his way thru four hours of hosting All Night Nippon-- a late night (after midnight) request show broadcast nationwide. One particular moment I remember was when he mistakenly cued up a Beach Boys record at the wrong speed. Wolfman, without missing a beat, turned down the pot, opened the mike and said 'Now let's hear the slooooowwww version, HALLELUJAH!'

After finishing at 4 a.m. he was gracious enough to hang around the studio and sign autographs for everyone present. My brush with celebrity happnened when I mentioned I was just starting out as a deejay (tho I'd already been working in TV and radio broadcasting at NHK for a couple of years). He smiled, leaned over and whispered 'Learn everything you can and never refuse a gig.' I took his advice to heart and now, twenty-some years later, I can proudly look back at a career that has included rock, country, NAC and AC formats, gigs as a major market PD and satellite network asst. PD, and a job that took me halfway around the world to start up a station in Singapore.

Before there were shock jocks, there was the Wolfman, who seemed to take great(!) joy in saying the word ca-ca on his AFRTS shows. Long live Wolfman Jack!

I'm using it on my show tomorrow too. Don't forget though there were other
songs about or featuring Wolfman, one often overlooked is "Hit the Road
Jack" by the Stampeders which has Wolf talking to 'Cornelius'. Typical
Wolfman zaniness.
Still, "Clap for the Wolfman" is my fave too.

Bummer. The Wolfman went to that great wolfpack in the sky yesterday. As you know, he and the I-man were great buddies and former stationmates at the old WNBC. I think he was on one of the last shows Imus did before he went on vacation. Hope that Imus can play the interview again soon.

Someone on CompuServe suggested eating half-melted popsicles in his memory, alluding to a scene in "American Grafitti", the film that helped make Wolf a household word. Bye, Wolfman.

Planning a reunion next year of broadcasters who worked at ZBM radio and Television in the mid-fifties. Have already located many ex-colleagues.

Still looking for:

1: Jack Dodge, ex program director last heard of in or near Edmonton, Canada.

2: Greg Poole, a newsman also believed to be in Canada. Last heard of in Toronto.

3: Jim Mc Laughlin, a disk jockey, last heard of in the Albany - Schenectady area.

4: Aubrey Harris, TV chief engineer, last seen in London, UK.

Anyone knowing the whereabouts of any of the above, please post a reply and E-Mail to: Jlloyd7@aol.com

Thanks,

Jlloyd7@aol.com (Jay Lloyd, KYW-Newsradio, Philadelphia)

# 687. Kansas City Radio Watch (29-Jun-1995)

Newsgroup: rec.radio.broadcasting
Date: 1995-07-03 00:00:00 UTC
From: transvox@interstate.net
Message-ID: <3t84nm$77c@vixen.cso.uiuc.edu>
Source record: 30815

Written June 29, 1995

It's time for yet another of those mysterious Kansas City Star
tidbits about the now-silent station at 95.7 mHz.

Earlier this year, New York City group owner Frank Copsidas bought
KZTO(FM), licensed to Ottawa, Kansas but based in Lawrence. KZTO had
been silent since January 1994.

Copsidas, also the owner of KTOZ-FM in Springfield, Missouri, announced
plans to bring his chain's "Channel Z" CHR-style modern rock format
to the Kansas City market on the rimshot signal. Copsidas has also
applied for a call letter change to KCHZ.

Now the Star's gossip column is reporting the station is up
for sale with an asking price of $6 million in cash. The station's
call letters were misidentified in the column as "KTZO-FM".

Channel Z's Copsidas told the newspaper that "we've had people come in
and offer $2 million, but we paid more than that" for KZTO. Copsidas
is also quoted as saying, "the second we're on the air that
[$6 million] price goes up."

Copsidas now says the station will return to the air in September from
a new transmitter site. As previously noted in AIRWAVES, that
site will have to be closer to Kansas City, yet can't be any closer
than west-central Kansas City, Kansas because of mileage separation
requirements from KWWR(FM) in Mexico, Missouri.

More on Brother Stair: Several AIRWAVES readers and Radio Watchers
informed me that the evangelist, now heard on Oklahoma
City's sorta-clear-channel KOMA(AM), was busted a few years back for
trying to outfit a ship for offshore shortwave broadcasting.
Another Radio Watcher also reported hearing the KOMA broadcasts in
March (thanks for the correction) -- I don't listen to KOMA
that often because Kansas City is on the edge of the station's
coverage pattern.

You got that right. With no one entering the business, it won't take
long before there's virtually no one in the business! No new talent,
no fresh voices, senses of humor, insights, opinions, personalities.
No local content save for psa's and promos and local commercials.
Why would anyone want to listen to a satellite feed all day, knowing
it's someone in a city half-way across the country, someone who has
no personal stake in your town's activities, concerts, politics? No
personal one-to-one contact with a listener. Just fewer bodies =
black ink. And one GM I know said that once his station went
satellite, no one would know the difference. That's dumber than he
thinks his audience is.

I'm not down on advancement either, but no matter what the execs say
about radio having to change to catch up with the 90's, this is the
wrong way to do it. Automated/satellite radio feeds is the best thing
to happen for newspaper ads in a long time. The managers will come to
realize their mistakes, if they don't know already and are just
lining their pockets for when THEY'RE the next victims, but by then,
it'll be too late for us, and for radio.
I lost my job to "restructuring" including more satellite feed, a
month shy of my 13th anniversary at the same station, and the end of
a 19-year career. I'm not bitter anymore, just very disappointed.
BTW, if anyone needs a drive personality/talk show host, my resume is
available to legitimate requests.

True, but it's not local material. What does someone in Fredericton
care about a concert in Vancouver tomorrow night? BFD. I lost my job
to exactly this kind of short-sighted non-thinking by management
under pressure to put black ink on the bottomline and to hell with
the listeners. I've heard one in Ottawa say that the listener would
never know the difference. Maybe true if listeners are as stupid as
he is, but I don't think they are.
(snip)

Again, exactly right. Radio executives seem to think that no people =
no costs. Wrong. Those people are who put the bucks into the
stations' coffers in the first place, and with no one to appear at
station functions/concerts/remote broadcasts/promotional appearances,
the audience will very soon turn off the jukebox. I hope they start
rockin' the jukebox, to borrow Alan Jackson's song, and convince
execs to put humans back on the air before radio dies completely.

BTW, if anyone in the Ottawa area is looking for a broadcast
personality with 19 years experience as a DJ and talk show host, my
resume is available on legitimate request. Thank you.

Dennis,

The hornets would have been a good time to test an old CO/2
fire extingusher on. Freeze there little stingers off... if
it works. And run like bleeep if it don't.

Now as to KaBLAMS in the night and such.

Well, one rig that I tended had a 3cx15000 as a grounded-grid
PA. This thing sat about an inch high ring of Teflon between
the plate and ground.

Now this was at a VeryEnvironmentallyCorrect NCE, so I had
no Freon to clean this with and that hill has lots of dust
floating around... and no one had tried to use any sort of
air filters for years.

Ok, so I've got some problems that didn't solve with any
of the things that I figured should have and all that was
left was to figure that I'd best pull the final and take a
look-see.

E-Yup. Lots of dirt. Took the beast apart and the only thing
that I found to clean things with was a bottle of 80 proof
Vodka that someone had left behind. Suppressing the urge to
us it all on me, I blasted air through everything, and then
cleaned the Teflon with the vodka. Opps. Not a good move.

The next night, the transmitter takes a dump. Ok, talk the
board-op though getting it up on the back-up rig and drive
to the hill. Hook main to the dummy load, and bring it up.

KaBLAM. Ok, so now I've got trip lights for the PA. Power down, ground everything, and start looking.

The first thing I find is a small screw where there should be none laying loose, inside the PA assembly. A small screw like the ones that hold the output ring around the 3cx to the Teflon. I run my fingers around and find a hole with a funny feeling edge to it back where I almost cannot see it. A mirror and trouble light show that there is a missing screw and soot on stuff.

Ok, so out comes the tube and I look at the Spot from that side. OOOPS. Something nasty happened. There is this buldge in the Teflon and it's not a nice color. I pull the ring off and having had the good fortune to have left my Dremil in the truck, I play Teflon_Dentist until the char is all_gone.

I figure that it was the water in the vodka. There was an old one of these rings in a scrap pile by the work bench that had *LOTS* of these blast holes in it. Proabaly from the previous CE using the vodka.

Then there was the kid that took one contract away from me. That site was also on a hill, in a National Forest. Just after he took over, they had a fire in the canyon below the transmitter site. This was another NCE. I'd been 'on-board' as the "Interim CE" while the made a "selection". I'd started to hack in some makeshift filter frames for the air coming into the building, but when folks don't pay for the hours over contract, such things come to a halt. I had aggreed to serve as his 'back-up' for a bit in no small part because I like to fix problems that I figure might be mine, myself.

So, the week after the fire, one of the dual-transmitters stops being willing to stay on the air. Kid finally goes to the hill, opens the PA cabinet, sees the 3cx15,000 all blue on the anode and jumps to the ass_umption that it must be an old tube, never mind that the blue only goes a quarter inch out the fins. He changes it. This is one of the Cetec rigs, btw. Q in this PA is *REAL*HIGH* when it's unloaded. Like blow the knobs off and spit hot metal out the holes time High-Q.

He didles with the drive and grid tuning in low power, then puts it into high. KaBRAAAACKBLAM!. It arcs from the load tuning shaft to ground, makeing two pieces out of the shaft.

Ok, so *THEN* he calls me. (Thanks, Kid.) I manage to talk him out of 'just turning it back on.' After all, what difference could the missing hunk of all-thread that was part of the tuning assemble make. Let's all cast a glance to the odd Gods of the Galaxy for a moment.

Ok, so he Gets The Message.

That night, after I get done with another client on that hill, I stop by and take a look. Soot. Soot on EVERYTHING in the PA cabinet. Piles of fly-ashe in the corners of it.

I sat and had a soda, told the transmitter how sorry I was about what I was going to have to do, and went and turned the keys in.

I guess that folks that hire children get what they are willing to pay for, so that must be what they want.

DecalcoMania, the club for collectors of radio station promotional material, airchecks, and jingles, will be having a mini-convention next month.

The event will be held in East Brunswick NJ on July 28-30. Planned events include seminars (one on PAMS jingles), group dinner, auction of radio related promotional material, and lots of time for trading stickers, magnets, airchecks, and whatever else you're into and bring along.

Registration will be $20 for the whole weekend or $10 for Saturday only. Registration entitles you to pick up your share of promotional items donated to the Promo Table project, as well as be eligible for door prizes. It also helps pay for the meeting room and refreshments within.

For more information, registration form, and/or a sample copy of Decalcomania either send email with your postal address to 72212.441@compuserve.com or send a SASE to DecalcoMania Convention, Box 126, Lincroft NJ 07738

## 694. Looking for used equipment

Newsgroup: rec.radio.broadcasting
Date: 1995-07-03 00:00:00 UTC
From: Dave Sheranko <dpsher@planetx.Bloomu.EDU>
Message-ID: <3t84nr$787@vixen.cso.uiuc.edu>
Source record: 30822

I just started working at a local, low-budget AM station that's trying to turn itself around into a respectable broadcast facility. Problem is, we're on a very crimped budget due to the lack of sales (and high expenses) brought in by the previous owners. On top of that, we've had major problems which caused us to move twice in the last year (we were even at the transmitter shack for a while). The result of all this is, we have almost no budget above our operating and music purchase expenses, and it shows; old CD players (circa mid-80's), a failing, semi-outdated console, one cart machine, a reel that works 10% of the time, and no cassette machine to speak of.

So, we'd like to know if anyone out there has any RELIABLE used equipment that they'd like to unload. Even if it's too "feeble" to suit your application, it might do us just fine. And if anyone can make a recommendation on any of the major used equipment vendors out there, please feel free to drop me a line as well.

Thanks a lot!

Robert Wood at CHUM FM Toronto in the spring of 79 went to something
called "Star Sets" which were 20 minute sets of all music from the same
artist. They did that 24/7. I think the reasoning behind it was that at
the time CHUM FM was repositioning from the heritige AOR in Toronto to
their present format which is an Adult CHR. So it was a nice bridge I
suppose.

nult CHR.
suppose.

In article <3sthvd$rhg@vixen.cso.uiuc.edu>,
fybush@world.std.com (Scott D Fybush) says:
>
> Saw an FM stick in the hills near rt. 79 west of
>Cornell which I think was WYXL-FM (it was located on land belonging
>to former owner Cornell University), ...

Sanity check.... West of Cornell is downtown Ithaca. Toward the east
would be WHCU's old site, which I think they still use. To the southeast
would have been WVBR-FM. The latter is more visible from the highway.
Both were on Cornell land.

> ... and a 4-tower AM site
>on a ridge to the south that I suspect was WHCU(AM) 870.

That's WTKO's site. Four towers high on the south hill, aimed into
downtown Ithaca.

WHCU(AM) was non-directional.

Things have changed a lot, mostly in the "imported" signal area, since
I worked for WVBR-FM, not too many years ago.

# 699. SONIC FAX RELEASED!!

Newsgroup: rec.radio.broadcasting
Date: 1995-07-03 00:00:00 UTC
From: vdavis@netins.net
Message-ID: <3t84o1$792@vixen.cso.uiuc.edu>
Source record: 30827

Reply-To: vdavis@netins.net

My name is Val Davis, and in addition to being the Network Voice for ABC/SMN's Classic Rock format, I am also doing system design, installation and sales for SMARTS Broadcast systems.

Last week during the ABC/SMN affiliate conference I had the honor of unveiling our newest product...the SONIC FAX.

SONIC FAX is just what it sounds like...a fax machine that sends audio from one place to another via a standard telephone line. Networks can distribute spots or send liners and promos. Ad agencies will be able to do group sends to multiple stations with the spot and the traffic information all in one file. Reporters can record broadcast quality stories in the field and "fax" them back to the station. Radio stations can exchange production to keep voices fresh. Groups can send audio from station to station. The possibilities are endless. It takes about 4-8 minutes to send a :30 second spot. Some might be faster than others depending on your local service and how clean the line is. The quality is 16bit stereo at 44khz sampling rate.

If you are interested call me Val Davis at 1-800-213-3350. I'll send you more information.

Also...if you are a small station in need of production from time to time, I recently offered my services to all of the ABC affiliates and I would be glad to do production for you on a piece by piece basis. I charge $30 per :30 sec spot complete with music and v/o's. You write the copy. I can deliver via mail or by digital sending. My voice is currently heard on over 50 stations nation wide and I used to do V/O's for ABC television. You can call me at the number listed above.

For those of you who don't know, SMARTS is the oldest computer automation company in America. SMARTS also has more units in the field than any of our competitors, i.e. Arakis, Computer Concepts, The Management, Dave Scott Studios , Rodman, or any of the seemingly endless list of automation manufacturers. I came to SMARTS having spent alot of years working with all those other systems. I believe that the SMARTCaster is truly the Cadillac of the automation systems.

Yeah, but don't forget that this does not mean you will necessarily
get a liberal.

Art Bell and Chuck Harder are on stations because they help us sell
advertising. In short, more listeners want them than want guys like
Leykis who, personally, I find a little hard to take. I put Leykis on
my stations and my listeners will find Harder somewhere else.

I put my money into my daytime hours where we are entirely live and
local. But not liberal, because, again, that is not where the market
is. If it was, I'd probably play music, but that--as Bruce Williams
would say--is a whole different program!

BTW, Bruce Williams still has 10,000,000 listeners a night and he
almost never talks politics.

Which tells me that meybe we ought to spend more time on consumer and
health issues locally. They're not as sexy as politics, but they
attract large audiences.

Last I heard (On Johnny B.'s radio show, no less), Ed Till is in the south, Florida if I remember right. In fact, he recently did a show in the nude, which was something of a stir in that town.

Johnathan Brandmeier is on the FM Loop, FM 97.9 in the afternoons (3-7pm), valiantly resisting the urging of the station to go back to morning drive, if what the implications he's made on his show are correct. I hear he has been broadcasting from both Chicago and LA, although it's not obvious when he is in either locale.

hi folks,

can anybody gimme information, who have the higher market shares in US radio :

billboardTop40 hosted by shadow stevens
or
WeeklyTop40 hosted by Rick Dees

background:
for many,many years afrts/afn-europe had broadcasted the top40billboard by Casey Kasom, later by Shadoe Stevens. cause it would be more accepted by the most people overseas (according to afn-europe4s spokesmen). Since nearly one year they have RickDees (who is diffent - compared to Stevens, I think).

could this decission. have s.t. to do with changing listening habbits in the usa. is RickDees the more famous radio presenter ?

>hilltop tower site is mowed meticulously. WPLM-FM transmits from the
>top of one of the towers on this site, located at the end of Marconi
>Road, off Columbus Road, which is immediately across from exit 7 of SR
>3.

I did the transmitter shift there many years ago. Jack Campbell was
in command, of course. I haven't heard ... has he passed on? If WPLM
changed to anything other than Big Band (especially AC!), I don't think
Jack can be running it anymore, right?

The hilltop was like Jack's version of Southfork, complete with stables
for his horses. Half the people roaming around the studio building were
his farm hands. Lots of folks, including U.S. Senators, regularly dropped
by to say hi to Jack.

Then there was his famous annual Clambake, in the shadow of his towers.
Everybody who was anybody in Massachusetts was there; at least if they
were Democrats.

Expansion ot 1710 is going full steam ahead .. . the 9 kHz separation
bombed here, perhaps because of the costs of modifying antennas?

In the Western Hemisphere, longwave is mostly used for aero/marine
navigational beacons. I guess it could also support some broadcasting,
although the high costs of antennas (four times as big for LW as for
AM) and the relative lack of LW radios here, would put a damper on
things . . .

>>size markets is being pumped in by satelite. Management say they like
>>it, costs are down and they are putting out a product that is
>>professional. This is true.....but wait 5 years down the road. I

What's ironic is that the satellite services expound on how great their formats are, and if it sounds canned, it's because it isn't being done "right" by the affiliates. Probably semi-true....BUT....what stations are the ones going satellite? The ones with enough smarts to make it sound semi live are (generally) the ones with enough programming and sales expertise to make money with live jocks, and if they use satellites at all, it's maybe overnites. On the other hand, the stations that DO run satellite all or most of their broadcast day are, for the most part, stations that couldn't make any money these days anyway, either due to inept management, a crummy signal or a combination of the two. Those are the ones using a rinky-dink automation system like a former employer of mine does that consists of 3 cart machines and a reel to reel deck controlled by a bare bones program running in some little 286 PC. Naturally, you get the same 3 sweepers in the same order again and again (and sometimes the really comical stuff like when the ID doesn't recue and you get an ID every :20 or so...at least you're legal!) I doubt many of these stations are making any money this way either...the station sounds bad, therefore fewer listeners, therefore fewer advertisers/ lower ad rates, therefore still no profits.

Hopefully, the pendulum will begin to swing the other way.

Steve

## 713. Book: Ahmet Ertegun, Atlantic Records

Newsgroup: rec.radio.broadcasting
Date: 1995-07-03 00:00:00 UTC
From: jgallagh@interserv.com
Message-ID: <3t7oh4$fgk@vixen.cso.uiuc.edu>
Source record: 30927

Could someone please tell me the name of the book by Ahmet Ertegun which outlines his years with Atlantic Records.

It was mentioned in a previous thread on payola and apparently there are a number of references to radio stations, personalities and the like.

I believe he was (is?) the Pres. of Warner Bros. distributed label Atlantic.

I have searched several libraries in Massachusetts but there is no record of any biography under his name or Atlantic Records.

Interestingly, Atlantic Records used to own the radio stations in Worcester, Mass. where I worked in the 70's: WAAF -fm, and WAAB -am.

Back then it was much more common for record companies to own radio stations but the possibility of payola and related concerns caused some of the labels to divest their broadcast properties.

An excellent related book is "Stiffed" the story of MCA Records involvement with Morris Levy which also details a great deal of radio and record involvement.

|
|Irrelevant.

If you had read my article in context, you would find that it is very much relevant. My point was, and continues to be, that radio and other media reflect (as well as shape) the society within which they function. Moreover, many of these trends are not new. The same trends of increasing triviality of content and concentration of corporate ownership are affecting all mass media. While the two trends are occurring at the same time, they are NOT causative of one another.
|
|Radio stations that aren't newstalk, that don't do network news at the top
|of the hour, (and even the ones that do do network news) only have a few
|minutes to fill. TV has at least a half-hour.

Not on every TV station. Besides, if TV has so much time, then why is so much of it filled with trivia?

(Perhaps you would like me to send you tapes of WDAF-TV, which runs 10-1/2 hours a day of news, most of it as deep as a drained wading pool??)

I think you have really, really missed my point. I also compared the content and ownership of newspapers, much less constrained in this regard, to the broadcast media. A subscription to the St. Louis Post-Dispatch (locally owned) or the Des Moines Register (ruined by Gannett) would quickly show you that newspapers are suffering from the same rush to meaninglessness.

Context, context!!

It may just have happened to radio sooner and quicker because it's so changeable in nature.

IM>When I got into radio 21 years ago, it was a place to inform and
IM>entertain listeners while having a helluva lot of fun. Today, that
IM>radio appears to have vanished forever. And that is sad.

Mary Ann,
I got into radio in 1960. Even then my boss was interested in making a living. I was 13 years old and was having a helluva good time. It's now 35 years later and I'm still having a helluva good time. My company's radio stations and its network still inform and entertain listeners. And ... we do it without hate. Our news department still regularly wins awards over the all-news stations and we sleep well at night. We still do radiothons for charity a couple of times a year and hold events that allow our listeners to meet their favorite personalities.

IM>As for duopolies, I would like to butt-kick the person who came up with
IM>the idea. Last June, the management at my station decided to purchase anothe
IM>local station. The purchase price? Over three million dollars. This
IM>spent by management that has denied ALL raises to ALL employees for the
IM>(at that time) previous five years. (You read that correctly, no raise,
IM>no even COLA, for five years.)

But you stayed there. If I hadn't received a raise in five years, I would have jumped ship long ago. Ultimately, you're the master of your economic fate. If I were you, I'd start looking for gainful (more gainful) employment and get out of the situation you're complaining about.

IM>I went from co-anchoring six morning newscasts on our station, to being
IM>the sole anchor for both stations...15 newscasts per morning. Raise?
IM>Do pigs fly? A more than doubled workload and still no raise for (now)
IM>six years.

Did it double the length of your workday? My newspeople anchor, report, do investigative features and public affairs features. Last week one of them asked if she could do another documentary. Did I mention that they also write their own material?

IM>managers who force people to work themselves to death...at my company
IM>and all others who engage in this type of brutal, heartless, selfish
IM>practice. I just hope I'm still around to see it happen.

Sounds like you've been listening to a union steward! No one is forcing you to work there. Get out while you're still alive. Get a government job where you'll have more breaks than worktime and all the security you can handle. And ... you won't have to care about your

customers.

I can only imagine the sympathy you'd get from folks doing actual
hard labor in steel mills. I imagine a few would be happy to trade those
searing furnaces for 15 cushy newscasts. I also know a few Talk Show
Hosts who wouldn't mind relaxing in a news department instead of talking
for 4 hours a day after spending hours preparing topics.

IM>I still hate my job and hate working mornings, but at least I have a few
IM>minutes of smiling during the drive in.

You deserve better than that. Start looking for a job you can love.
A life is a terrible thing to waste hating every minute.

Rich
Director - WOR Radio Network

Reply-To: davwitz@aol.com (DavWitz)

It might have worked for Jerry Blavat, maybe it could work for you! The Geator with the Heater is said to have put a murder contract out on rival oldies DJ Hy Lit, proving that the most heated competition in Philadelphia isn't between Geno's and Pat's over cheesesteaks.

Lit made the most of this on the air after the news broke on Thursday while Blavat, who's swapping low-power WPGR-AM for even lower-power WSSJ-AM, was "on vacation". But hey, all the press (and the New Jersey Crime Commission) spelled BOTH their names right, and that's the name of the game, right?

If your station needs a visibility boost like this, contact Nicky Scarfo, c/o The Joint. Who needs consultants, anyway?

Do stations using Powerside sound noticeably different (i.e. distorted)
on a regular AM radio?

: In case no one's seen it, PLEASE DO!!!!
: "Putney Swope" is a lost American treasure that ranks with Welles' 2nd grade
: stuff. In other words, one of the greatest films ever.

I enjoyed Swope very much when I saw it during its original release. I saw it again on cable recently and found it amusing but with a dated feeling, kind of like watching a Mod Squad rerun. The basic problem is that was done as high satire back in the 60's (or was it early 70's?) would not be views as out of the ordinary today.

Remember when Fernwood Tonight spoofed pro wrestling? The "over the top" caricature presented on FT turns out to be no more outrageous than many of today's toned down wrestlers, such as Rowdy Roddy Piper.

And so it goes . . .

I have a very fond memory of listening to WTRN-1340 in Tyrone, PA about ten years ago while driving to State College, and for the better part of half an hour, ALL they were broadcasting were the Mutual network beep tones! It may have gone on even longer, since I was out of range rather quickly. Very funny, and funnier the longer it went on...

> Ever since WKGB was translatored from 92.5 to 92.1 in JC, we've noticed

Not more economical, but rather, a scarcity of those hard-to-allocate 50kw FM frequencies. Believe me, WKGB and WGRG and the rest of those Class A FMs would gladly take a 50,000-watt signal if one could be squeezed in. But since it can't, the translators are their best (and maybe only) chance at serving the city from the suburbs...

Thanks for finally taking note of my station. I've always been intrigued with your perspective of San Diego radio...but somewhat disturbed that you haven't noticed what is growing to be one of San Diego's top stations. Since my arrival, my show has gone from a 2.1 share to 2.8 (12+) , 2.5 to 4.0 (18-34) and 2.1-3.6 (25-54). I consider this an amazing jump in a market saturated with rock signals ...both local and from L.A.! The staff at KKBH (102.9 The Beach) is the best I've worked with in the last 13 years. Program Director Jack Silver (from KIIS....interestingly enough my competitor during the late 80's) is doing a great job with an amazing airstaff. Keep your eyes on KKBH, 102.9 The Beach in San Diego.

ID>Ever hear of Talknet? It was a very successful talkradio format from
ID>1980 until a few years ago. NBC sold the idea to affiliates that it
ID>could be placed *anywhere* in the schedule since it did not depend on
ID>live clearances to be topical. Thus, Bruce Williams and Sally Jessy
ID>Raphael became household names nearly in just a few months.

ID>Contrast this was ABC's Talkradio format which was live talk requiring
ID>live clearances, which bombed not long after its debut. Except for people
ID>who listen to KABC, does anyone really remember Ira Fistell, Bob Aranson,
ID>or Michael Jackson?

David,
This is the most interesting revision of history I've seen in a long time! Talknet required the live clearances and required six hours a night. I believe they still do.

ABC Talkradio ended 9 years after its debut. At the end it had more than 300 stations, more than at any time in its history. It was shut down by Aaron Daniels who was retiring from the company and felt the company's efforts could be used more profitably in other areas. Since I was the Director of Station Relations for ABC Talkradio, and its evening networks (Tom Snyder and Sally Jessy Rapahel), I found it surprising that they would still pay me a handsome sum if it had failed so long before.

Many people remember Michael Jackson and Bob Aaronson. So many that Bob begins a live overnight show on the WOR Radio Network on July 10th. So far, we've affiliated an average of 15 stations a day since we made the announcement on Thursday. So much for being forgotten.

It never ceases to amaze me how the perspective is so different between those of us who were actually there and those who weren't.

Rich
Director - WOR Radio Network

Source record: 30948

I left the business two years ago to pursue graduate studies; now I want to get back on the air. I have 16 years' experience as a jock, PD, APD, MD and Prod Director. I spent 10 years (1981-1991) on the air in Philly (WSNI and WKSZ) doing PM drive and middays; between '83 and '91 I was consistently in the top 5 in the market (12+)--often #1--middays. I also spent a year working weekends in NYC. While the bulk of my experience has been in the AC format, I've also spent a few years working (and programming) CHR, and even done a bit of Country.

I'm looking to stay in the Philly area, including smaller markets in Jersey or Delaware, and will consider FT or PT work, any shift. If you have a FT opening outside the Delaware Valley, I'm not averse to relocating for the right money. I have a C&R ready to send. If you're interested, please reply via e-mail.

J. Patrick

## 735. When Radio Was

Source record: 30836

Reply-To: ag365@freenet.Buffalo.EDU (Carl K. Gorney)

Up & down the dial in the #40 market:

*WGR(NewsRadio 55)hires Jim Ranney to handle afternoon and PM drive
news anchoring;no idea as yet if it'll include street reporting duties.
Ranney,who worked for WEBR(which became WNED-AM;970;public;news/talk)for the
past 4 years,survived when 'EBR became 'NED-AM in 1993;in the process,all but
8 staffers were blown out,and its news format to 9pm and jazz after that was
switched to mostly satellite-delivered news from NPR & PRI. Ranney was
hosting Monitoradio in PM drive when he left June 23.
WGR also offically starts up in its new digs at 695 Delaware Ave today,
as does WWWS(1400;satellite urban oldies).

*Hot rumor making the rounds,according to Lauri Githens' Buzz column in
the Buffalo News last Thursday:Kerry Gray,PM driver at CKEY(FM 101 The
Planet)would be heading over to WUFX(album/modern rock;103.3 The Edge)for an
air shift. Apparently,the rumor surfaced at Artvoice's block party a couple
of weekends ago. Kerry's reaction? "Nah,I'm wayyyy too busy planning the
Planet's new punk-talk format. All-Henry Rollins weekends. Think of it." :)
Seriously,Gray hasn't heard from the Edge,adding "it's pretty Top 40
alternative,and it's not the radio I do." He couldn't if he wanted to-he
just signed a new 1-year deal.
Also:Jolene Baller,who left WGRF(97 Rock)over the Chistopher Reeve joke
affair,has landed at the Planet. She'll be handling the 12noon-4pm shift.
Baller said that the crew is "a bunch of old hippies and new bohemians.
They're pro-humanity and pro-family-I can't wait." Baller starts today.
The Planet's lineup now:

5:30-9am:Jon Summers
9am-noon:Bob Dancy
12noon-4pm:Jolene Baller
4-9pm:Kerry Gray

*One last note:CJEZ(97.3,Toronto)is now known as Easy Rock 97-3. Seems soft
AC from here.

From: Dave Biondi <dbiondi@electrotex.com>
Message-ID: <3tbaeb$192@vixen.cso.uiuc.edu>
Source record: 30838

The Society of Broadcast Engineers web pages are now available at: http//www.sbe.org.

Although the site has only been up a couple of days there is information about the organization, the SBE Broadcast Engineer Jobline file and "easy e-mail" links to the Officers and Board of Directors. E-mail links to local chapters and regional broadcast auxiliary Frequency Co-ordinators should be up in the next couple of days along with some cosmetic improvements.

An anonymous FTP site will be on line within a week and, if you prefer, (and your browser supports it), you will be able to download files from the FTP site from the web pages using detailed BBS type file descriptions. There will be a large amount of broadcast related files and programs available. It is hoped that this web site will promote an understanding of the mission of SBE and a flow of information for broadcast engineers, worldwide.

Your comments and suggestions are welcome. For those of you with broadcast related web pages, we would appreciate it if you would include our link in your lists.

Dave Biondi
Site Administrator, sbe.org

[Moderator's Note: I got a "No DNS entry" error when I tried. If you get that error, try http://204.96.98.194/ this is their direct IP address. Bill]

## 739. San Diego Radio Watcher 7.4.95

Message-ID: <3tbaeb$193@vixen.cso.uiuc.edu>
Source record: 30839

For the U.S. readers: remember to take time to reflect on our 219-years of freedom!

Mercy! It's been noted that Wolfman Jack has passed away. How fortunate I was to hear him on Don Imus' morning show and last week as the kick-off to Mr. KFI's new nightly gig. My memories of him stretch back from the 60s [XERF], made midnights special, and stretched the limits of a normaly plaid Armed Forces Radio.

Wolfman, may you howl in peace.

Station changes: the rumors are true! XETIN, Tijuana, Mexico, is relaying KOJY, Costa Mesa. Today, the programming is broken in with espanol announcements with calls, frequency, and city. The next event is to switch from the music ballads to the AP network news desk. My thanks to David Alpern who furnished some interesting information,[licensed to Costa Mesa, but antenna in Hespira], and adding information to my radio log. :-)

Noted at the Karl Strauss Brewery: Special beer in honor for KKLQ's morning team, Jeff and Jer. While not available now, the high potent beer, is made at the local pub for consumption. [and if it's like the other fine-crafted liquids, in high volume] The team continues to be the number one morning show in San Diego County.

Stacy Taylor is out! GASP! Ok, so he's taking a well deserved vacation to his high school class reunion in Ohio. Filling in this week is the weekend team of Burger & Prescott at 760 KFMB.

I've packed my SONY ICF-2002 receiver and have headed out for the sands of the middle east. I will be telneting to my CPU to check on e.mail, and read the world famous Airwaves reports. Be back by July 17.

# 740. Apollo Radio sold

Newsgroup: rec.radio.broadcasting
Date: 1995-07-04 00:00:00 UTC
From: transvox@interstate.net
Message-ID: <3tbaed$194@vixen.cso.uiuc.edu>
Source record: 30840

Written June 30, 1995

A sale of the Apollo Radio chain, owner of two Kansas City FMs, now awaits Federal Communications Commission approval.

Apollo, also the owner of stations in Salt Lake City and Charleston, South Carolina, will become a part of Regent Communications, based in Covington, Kentucky, according to a story in the Kansas City Star.

According to the article, Regent is paying $50 million for Apollo. Individual station prices were not provided in the story.

The Star quoted Apollo president Bill Stakelin: "A couple of our financial investors wanted their return. Many of us wanted to continue our efforts to grow a major broadcasting company." Stakelin will acquire an ownership interest in Regent and become the company's chief operating officer.

Regent owns stations in Louisville, Kentucky; Las Vegas, Nevada; and Dayton, Ohio, according to the newspaper.

KMXV was Apollo's first acquisition, formed after Stakelin stepped down as president of the Radio Advertising Bureau in the late 1980s. Apollo also formed Kansas City's first duopoly with the purchase of KUDL(FM) from Shamrock Broadcasting in 1993. In the process, Shamrock spun off former Top-40 legend WHB(AM) to a farm broadcaster based in Carrollton, Missouri.

KMXV is a contemporary hit/dance station; KUDL is an adult-contemporary station. As usual in acquisitions, no changes are said to be under consideration.

Although much of the remainder of the world uses 9 KHz spacing,
it was apparently too costly to move all the stations in the US to 9 KHz
spacing. The idea seems to have died years ago. I'd almost forgotten
about it.
The expanded band is underway... slowly. There are provisions
for it in the existing rules, and the FCC has selected stations that
would move to the new band, but there is a bit of disagreement on which
stations will move, so it'll probably be a while. The station selection
is supposed to be based on who, when vacating the existing channel, will
result in the best reduction in interference.
By the way, I haven't shopped for a radio recently. Do the ones
currently in stores cover the expanded AM band? Seems that they would,
since the band is already in use elsewhere in the world.

>
>Expansion ot 1710 is going full steam ahead .. . the 9 kHz separation
>bombed here, perhaps because of the costs of modifying antennas?

I believe the broadcasting industry opposed the change since it would
lead to more competition and perhaps reduced allowable bandwidth when
AM stations really need more bandwidth. But radios with digital tuning
were already in use when the proposal was made, and they might become
obsolete. Assuming the Eastern Hemisphere frequencies were used, it
would be necessary to tune to 549, 558, 567, 576, 585, 594, 603 kHz,
etc. Some radios are internally switchable, but I doubt that they
all are.

Looking for solid state replacements for 5563 A gas thyratrons as used in RCA BTA-5H AM transmitters.

Please reply to GeoffRain@AOL.COM or call 401-433-4200 x 134 and ask for Geoff Rainville.

Thanks!

# 747. Re: help out an uniformed soul

Newsgroup: rec.radio.broadcasting
Date: 1995-07-04 00:00:00 UTC
From: Andrew Paul Dickens <apd2c@virginia.edu>
Message-ID: <3tbaej$19f@vixen.cso.uiuc.edu>
Source record: 30847

Greetings! I'm Andrew Dickens, general manager of
WUVA-FM Charlottesville, Va. We are a student run commercial
radio station (one of a few) operating at an ERP of 3,000 watts
on 92.7 MHz.

I hope that I can help you with some of your
questions. I'll just ramble on here for a while.

1) Commercial or noncommercial? Commercial: can sell
ads. Noncommercial: Cannot sell ads. Pretty simple. You are
more likely to get a station (and it will be easier to run) if
you are Noncommerical Educational (refered to as "NCE" in the
previous message). Unfortunately, you will need funding and
donations to pay the bills. Of course, if you are commercial,
then everybody in town will mark you as an easy target. :(

2) GET SOME TRADE PUBLICATIONS!!! Radio World, Radio
Shapper, and ESPECIALLY "COLLEGE BROADCASTER". Actually,
college broadcaster writes a little manual about how to start
up a radio station. Give them a ring. Sorry, I don't have the
number handy.

Actually, #2 sums up everything. I'll stop rambling
now.

Other things to expect:

3) You will need a law firm to handle the paperwork.
We use Dow, Lohnes, and Albertson in Wash, D.C.

4) You will need an engineering firm to generate a
report stating that your station is ok with FCC laws (doesn't
interfere with other stations, correct power output for class,
etc).

Unfortunately, I can't compress the entire station
startup process into one message. Your best bet is to get
ahold of the "College Broadcaster Station Manual". There are a
lot of options and these folks can help you sort them out.

Also, feel free to get in touch with me.

Hope this helped some.

-Andrew

## 748. How do you use the Internet at your radio station?

Last I heard he was living in Paris, France with his daughter. Jack is
suffering from Alzheimer's Disease. Jack is best remembered as holding
down two shifts (10-noon and 4-6pm) on New York's 1010 WINS from 1956 to
1965 when the station shifted to the Westinghouse all news format.

## 751. KNAC in Spanish

Newsgroup: rec.radio.broadcasting
Date: 1995-07-04 00:00:00 UTC
From: MikeKNAC@aol.com
Message-ID: <3tbaem$19m@vixen.cso.uiuc.edu>
Source record: 30851

Donald Paschal writes
>outside of a few punkers in Hollywood, the Strip crowd, etc, 'NAC had a very small following.

As a member of the final airstaff at KNAC, it needs to be noted that the station was sold to a Spanish broadcaster for a 6 million plus profit in less than a year. At the time of the sale KNAC was billing better than ever before and with the recently added research, was edging up in the LA ratings. When we did leave the air, the other rockers in town made adjustments to try and capture any of the KNAC audience they could. Thousands of people lined up in the weeks prior to the station going off the air to purchase "The Last T-Shirt"and the people in line reflected a good cross section of LA rockers, not just "a few punk rockers in Hollywood".

## 752. Henry Nelson -- Memphis Evenings to Orlando Mornings

Newsgroup: rec.radio.broadcasting
Date: 1995-07-04 00:00:00 UTC
From: upgroce@msuvx1.memphis.edu
Message-ID: <3tbaeo$19n@vixen.cso.uiuc.edu>
Source record: 30852

To radio watchers in Orlando and Memphis and interested parties everywhere...Thursday, Jun 29, marked the last shift for Henry Nelson, the evening personality on WMC Memphis (Hot AC -- FM100) for about a decade. He leaves for a promising opportunity on mornings at Star 94.5 in Orlando. Second-hand information tells me that it has been jockless for a few months now in a Rhythmic AC groove...sounds very exciting.

I wish Henry best of luck, and encourage listeners/competition in Orlando to see what he has to offer the market and Star 94.5

The demos I've heard sound pretty good. I would EXPECT there to
be some increase in distortion on envelope detectors due to quadrature
distortion, but I didn't hear it on the demo I heard a few years ago at
NAB (when Kahn had a booth across the aisle from ours). On continuously
tunable receivers (nonsynthesized), the audio frequency response can
sound better than running normal AM, since the remaining sideband is then
centered in the IF bandwidth, instead of centering the carrier in the IF
bandwidth.

Well, with a VCR you can record a three hour stereo show, with full
fidelity, on $5 worth of media.

With an "audio capture" you'll need 1.3 mB of hard disk per minute to
record at AM-radio quality (22k/mono/8b), and about 7.6 mB per minute at
full FM quality (32k/stereo/16b). This can add up pretty fast.

full-fidelity stereo per tape. I call it the "poor man's DAT".
Great for airchecks. Instead of 60 or 90 mins, you get half a day!
Timed start too. Bill]

## 757. Any shared AM or FM freq.[2 sets of call letters}?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-04 00:00:00 UTC
From: croth@omnifest.uwm.edu
Message-ID: <3tbaer$19t@vixen.cso.uiuc.edu>
Source record: 30857

In previous editions of Head and Sterling's Broadcasting in America,
there's mention of a practice called "frequency sharing."

This is an arrangement in which two "stations" share the same
over-the-air channel. One set of call letters for 12 hours,
another set of call letters for 12 hours. Two licenses.

The licenseholders are free to strike an agreement to share a common
transmitter/tower.

Is this still done anywhere in the USA?

A direct response to me would be appreciated.

Cordially,

Chris Roth

Back when they were at the Loop the first time, Steve and Garry were
very briefly syndicated to Detroit and had an L.A. station lined up to
take the show as well... but then they "assaulted comunity standards"
one too many times and they were off the radio period before
resurfacing at 'LS-FM.
I was in the market at the time at DHS (not a radio station, a high
school!) and remember it pretty well. Just thought I'd let you know...

WNDR and WOLF are both still on the air, but surely not as you remember them. WNDR is a Country station and WOLF (1490, not 1450) is Urban. Don Bombard is doing quite well these days as Bob Shannon in afternoon drive at WCBS-FM in New York City.

There's a wonderful video on the WNDR-WOLF Top 40 battle, which is available through Art Vuolo's RadioGuide company in Ypsilanti, MI. Sorry, but I don't have the address or phone number handy!

Reply-To: ap048@lafn.org (Donald Paschal)

When I was working in the 80's at KANE-AM/New Iberia, LA, I was at an automated station. Since I perfected the art of putting an entire 6-hour show together in five minutes and putting on a cart so that no one would know I was doing other things, I had virtually full controll of just about everything in the place. Including the dish.

As I was surfing around the various satellite feeds, I happened across the feed for the late, lamented NBC network...and filling in the spaces between the newscasts was the late night feeds for WNBC-AM/660....at the time there were 2 very talented guys on the air. The Wolfman and a guy named E. J. Crummey.

Wolf was able to do what I was doing very well, on exceedingly better...his show was syndicated...basically pre-taped drop-ins that sounded like he wasz in the studio. And it was done straight, except that the weather had to be done. Crummey basically broke the fourth wall..he knew that a lot of people could figure out the Wolfie was on tape, so he played around with it. The end result was that the City of New York and a few red-eyed NBC Radio affils were treated to one of the quirkiest radio shifts ever heard.

When Wolfman died, radio lost a true talent....and there are damn few of them now.

By the way, the other guy is now know as Joe Crummey, holding down middays talking on 710 Talk-KMPC/Los Angeles.

Hello all!

What about the 1972 song written by Todd Rundgren about The Wolfman?

Simply, titled "Wolfman Jack," I always thought this was a song
in good spirits and it shows Todd's love of Wolfman, twentysome years
ago. This song is on the famous Rundgren: "Something/Anything?" album.

I read somewhere that several years later, Wolfman made his own rendition
of this song w/ him singing as a promotional record, but being only 19, I
am not sure of this..

Thanks for reading and maybe someone can use that song as a tribute on
their station ;>

Never met the Wolfman, but I did get to talk to him on the air once during one of his first comeback shows at XETRA-690 Tijuana in 1987, for which I'm glad now.

Our sister station, WHTK-1280, carries Imus and I was fortunate enough to hear the recent Wolfman interview. Hope it plays again soon.

Also, obviously without knowing it would be his last syndicated show, I rolled an hour of tape on his Saturday night program on WXTR-104.1 while in the DC area for the Bobby Poe convention.

(He was signing autographs at a DC bookstore that afternoon, but I couldn't get away. Now, of course, I wish I had.)

Wolfman will be sorely missed.

I listened to Bob all through out high school. I remember one summer night we drove down to the Sunset Strip to look for XERB's studios. As I recall they were somewhere between J. Ward Productions and Pandora's Box, later the site of the riots, we pushed the buzzer and they let us in! The man himself was not there. But we saw where he taped the show. a year later he came to a local high school with the Strawberry Alarm Clock. He wore dark makeup and for years we thought he was black. It was only when we saw him outside, and got close did we see he was white. He worked on XERF in Del Rio, Texas. I started my radio career at KWMC in Del Rio. He will be missed. He turned an awful lot of kids onto singers and groups we would have never heard anywhere else. He was an outlaw. Anybody got a solid gold Wolfman Jack roach clip?

## 769. Wolfman Jack

Newsgroup: rec.radio.broadcasting
Date: 1995-07-04 00:00:00 UTC
From: bsmith@cts.com
Message-ID: <3tbaf6$1af@vixen.cso.uiuc.edu>
Source record: 30869

I seldom come out of the woodwork but I think I should say something now. First, let me qualify my comments. Twenty five years ago I was in the radio business in California. I worked a number of stations that sounded like the old Bill Drake "More Music" format. Strictly a tune, time and temperature man. Some might even have called me one of the old time "screamers". That is a term not often heard these days. Having said that, let me get to the point of this message.

I certainly don't wish to speak for the nation, but I do feel compelled to say something. Wolfman Jack, (Bob Smith), has passed on. Back in my day Bob was already well established as one of the premier acts on the air. On occasion our paths crossed. You couldn't be in Broadcasting in California without running into the Wolfman at one party or another. On those occasions Bob always seemed to the center of attraction and the hit of the party.

I always found him entertaining. However, I sort of resented him some. It always seemed when I would get a good gig on the air they would put me up against Bob at the competition. If you know anything about California the "Mighty Six Ninety" XETRA was the competition no matter what town you were in. Amazing how those Mexican AMs would pound into your market.

When I heard of Bob's death my mind flashed back to those days when my entire life was hinged on April-May, October-November book. I remember finding myself stuck in some shoe box studio that reeked of cigarettes and coffee. I remember how lonely one could get after hours at some transmitter shack. I remember, out of boredom, de-tuning the Air Alert EBS receiver and picking up the Wolfman. I remember the one constant that always seemed to be around,....that un-holy harsh voice slicing thru the night saying ......"Have mercy baby".

Wolfy,...from one old retired "Boss Jock" I bid you farewell. You will be missed.

I stand corrected. Both Jeff and Scott Brewer pointed out that S&G were
in syndication for a brief period of time in late 1980/early 1981.
Therefore, it is possible that they had something to do with the demise of
Doug Blair in Detroit. However, the station probably could have probably
brought him back since S&G were only on the air for a couple of months in
the Motor City.

Thanks to Jeff and Scott for helping to jar my fading memory.

Steve Dahl and Garry Meier were on WLS AM. They left the station when it went all talk some years back, which was LONG before there was a WLS-FM. They went to WLUP-AM, then were later switched to WLUP-FM when Howard Stern began his short-lived stint on the AM station.

Dahl and Meier were definitely syndicated on Steve's own little network back in early 80's during the first go-around on the Loop. I know that he was on a Milwaukee station and carried here in Detroit on 99.5 WABX. I don't remember a Doug Blair getting aced out by the syndication deal on WABX.

Dahl was certainly ahead of his time with the syndication of "The Breakfast Club" via phone lines and satellite links. They would have given James Brown a run for his money for the title of the hardest working guys in showbiz. Dahl took the show on the road to each of the markets and also had his little band doing gigs at clubs at night.

Hi...
WNDR's still around, although it's mostly satellite country
these days (its FM sister WNTQ, aka 93Q, took up the CHR
banner). Don Bombard is retired, I think...not sure what happened
to Happy Jack or Fran McGrath, but I think Dandy Dan Leonard
might still be around on one of the stations, maybe even playing
country on 'NDR in the morning.
WOLF, on the other hand, has changed hands and formats
so often I've lost track of what they were doing...suburban sprawl
that their 1000 watt graveyard signal couldn't keep up with, finally
did them in. It has long since stopped being WOLF. (WNDR's
nasty nighttime pattern which nulls out Fayetteville, Manlius and
just about anything south, east, or southwest of town does THEM
no favors either, come to think of it.)
The AM band in Central NY is in bad shape, even worse than in
Rochester or Buffalo; only two AM stations, WSYR (news/talk and
often #1) and WHEN (also a talker these days, and slipping badly
since they virtually forced Phil Markert to retire in an unwise economy
move in 1993) even rate in the top 10 any more. Those are two of the
only three AM signals able to cover the market, the other one being
the former WFBL, which found religion and changed its calls as it
blew away whatever audience it had left. But it's more than that...
others would be doing better too if it hadn't been for idiotic program-
ming decisions motivated by short-term cost savings that ended up
costing them so much more in lost revenue than they saved.
If it sounds like I have strong feelings about this, I do...not just
because of general concern over the direction of the AM band, but
because I once worked for a station that was #1 at the time (WHEN),
and watched it gradually destroy itself over the last 10 years. A lot
of us worked hard to take that station to the top, only to watch it all
blow away...

Rich,

I'm still surprised that ABC got out of the evening talk business. I could see them leaving daytime talk. (I'm still not sure at this point if Rush's show could have ended up owned by ABC, or if they just weren't interested.)

But the weekday night time shows were, to the best of my knowledge, successful and popular. They were everywhere on the dial on the major news/talkers. It's that very show that's responsible for Mr. Snyder's return to network TV via cable, and it sure didn't hurt Ms. Raphael.

As soon as Tom Snyder and Sally Jessy Raphael's shows bowed out, CBS swooped in and Gil Gross took many of those clearances, if I recall right. I'm a big fan of all three, by the way. I never liked Tom's old "Tomorrow" show (possibly because I was quite young at the time), but the radio show won me over. I don't really like the kind of TV Sally does these days, but the Talknet and later ABC Talkradio shows were fascinating. (I wonder if she still remembers the ping pong balls in Pittsburgh...)

I remember Michael Jackson, too. The only mistake, IMHO, was to "fake" the local feel by the local number inserts. "To talk with me on KABC, call..." They were obvious. Is this the same Bob Aaronson I hear occasionally on the ABC Information network newscasts or is that another one?

I find it hard to believe that Chuck Harder helps you sell enough advertising to keep your radio station afloat, even in Tulsa. Many advertisers stay away from extremist programming of all persuasions, the result is that ad revenue is often lower than expected for the ratings the personalities may draw.

Excellent point. There's a lot more of interest to talk about than right wing vs. left wing politics. Canada's CBC Radio broadcasts many hours of excellent talk programs that aren't always walking the same political treadmill.

I will vouch for Rich's view of ABC Talkradio. I began listening
to it in 1989, 2 years before its demise, up to the bitter end with
Aaronson and Snyder. Affiliates were in both Phoenix and Tucson,
so it clearly wasn't limited to WABC/KABC's regions.

Comparing the talk radio atmospheres of 1989-90 and 1995, there seems
to be a lot more variety in viewpoints back then. The local Arizona
talkers were and are predominantly conservative, as you would expect
from the land of Barry Goldwater. Rush was as big on the airwaves in
1990 as he is now (no pun intended). But late night talk radio was the
domain of TalkNet and ABC NewsRadio, neither of which produced the
right-wing firebrand radio that we nowadays associate with the talk
format.

Immediately before Aaronson came on board the live overnight talk slot
on ABC, there was Freddie Mertz. Kind of off the wall, never really
considered him liberal or conservative.

Aaronson was the most appealing of the ABC talkers. His positions were
liberal, but he accepted callers of all political persuasions, and
didn't resort to the over-the-top stuff we hear from the left-wing
firebrands like the Liberal Avenger or Leykis. Very much of a nice-
guy persona -- he resisted every caller's attempt (polite or otherwise)
to change his gun control views, but without insulting the caller.

Snyder was slicker than the other 2, but he didn't (still doesn't)
beat you over the head with his political views.

Ever since ABC Talkradio was cancelled I haven't felt like listening
to late night talk. Art Bell runs a fast pace and is the most level-
headed conservative on the radio, but he tends to give too much play
to the conspiracy-mongers/UFOlogists to make the show listenable for
me. Then there's all the Rush re-broadcasts; if once was bad enough....

> It never ceases to amaze me how the perspective is so different
>between those of us who were actually there and those who weren't.

I still have in my hand a letter on ABC letterhead from Aaronson in early
1991 when his gig was about to be cancelled and an address for listener
comments was supplied. It was a form letter, essentially stating "I'm
not going to do the show anymore, but it wasn't my decision, and I'll
try to find a way to get back on the air soon. Thanks for your support."
Well, Rich, July 10 of this year wasn't soon enough! :-)

This is interesting, since I took the info from Talknet's own affiliate relations package, (which, unfortunately I no longer have). I believe I received this package about 1985 or so.

Also, one of NBC's biggest owned stations, KNBR, never ran any of Talknet live, except the old weekend geezer, whose name I forget.

One would think an NBC-owned station would have been required by the big bosses to play by the rules, if such rules existed. Bruce Williams was cleared by nearly every West Coast affiliate in the 7-10pm slot, though he was live 4-7pm, with the possible exceptions of Eureka and Santa Barbara which carried him live in afternoon drive. Sally was most often carried 10pm to 1am, again, well after her live show.

As to the robustness of ABC's Talkradio, you may remember something you yourself said: Talkradio was failing and turned portions of its schedule back to affiliates, allowing EFM to offer Rush Limbaugh and Dean Edell in former Talkradio slots. This was, what, 6 or 7 years ago?

## 783. Re: What is "beam tilt'?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-05 00:00:00 UTC
From: JeffM@sanctum.com
Message-ID: <3te27d$hns@vixen.cso.uiuc.edu>
Source record: 30762

In article <3tbaee$198@vixen.cso.uiuc.edu>, rrb@clm.aiss.uiuc.edu says...

>
>What does it mean when an FM station uses a beam-tilt?

Here's my simplified explanation of beam tilt.

Suppose there exists a "reference" FM antenna consisting of one or two bays. It radiates the FM signal through the air equally in every direction--north, south, east, west, but also up and down. If that antenna were in outer space, the "coverage area" of the station would be shaped like a giant sphere. This reference antenna performs very well in many respects, but it does send a lot of signal where it isn't needed.

Now it turns out that by using an antenna consisting of more than two bays, it's possible to focus more of the radiated signal straight out towards the horizon by reducing the signal radiated up above the horizon (which is totally wasted) and reducing the signal radiated down close to the tower (which is also wasted because very little signal needs to be sent there).

Suppose a station uses that reference antenna and 10,000 watt transmitter. Its "effective radiated power" is 10,000 watts (ignoring transmission line loss). But if that station switched to an 8-bay antenna, listeners would receive a greater signal strength--as if the station had switched to a 40,000-watt transmitter. Therefore its "effective radiated power" is now 40,000 watts. The antenna, by focusing more of the signal out towards the horizon, had the effect of multiplying the transmitter power by 4, so it is said to have a gain of 4. With the kind of antennas normally used today, the gain of the antenna is equal to about 0.5 times the number of bays.

The obvious advantages for the station with that high-gain antenna are that it can have an "effective radiated power" of 40,000 watts with a less expensive 10,000-watt transmitter. The station also saves money on its power bills since a 10,000-watt transmitter consumes less electrical power than a 40,000-watt transmitter.

There may be some disadvantages of the high-gain antenna, however. There may be "holes" in the station's coverage area where the signal is unexpectedly weak. And suppose the station is using a very high gain antenna with many bays. The signal then becomes focused in a narrower beam out towards the horizon, and if the tower is very tall or on a mountain much higher than where many of the listeners are,

there is the possibility that some of the close-in listeners will receive a weak signal because the signal may "overshoot" them.

FM stations in that situation can order an antenna which will focus the radiation very slightly downward instead of horizontally. This is called beam tilt, and the station will specify perhaps one fourth or one half of a degree of beam tilt. The effect is accomplished by delaying the current to the lower bays of the antenna. TV antennas also can be ordered with beam tilt.

I haven't kept up with this subject, but I know that in the past some manufacturers did not offer beam tilt on antennas of 8 or fewer bays since it was felt those antennas radiated a wide enough signal that beam tilt wasn't necessary. Also, at least in the past, the station license specified the amount of beam tilt in degrees.

Back in the 1970s I worked for a station with an FM that was grandfathered over the modern Class B limit and had listeners in two adjacent states, but I felt the station needed to have a stronger signal close in. The tower site is 10.5 miles from the city of license, and the elevation of the tower site was about 1100 feet higher than the city. The station had an 8-bay antenna with no beam tilt. I suggested to management that a study of the situation be done. It may be that terrain features were the problem since beam tilt probably shouldn't have been necessary. But management was concerned that beam tilt would reduce the fringe coverage area, which was important for the religious format which depended on mail response, so they didn't pursue it. Two other FM's had sites equidistant from the city, and they had beam tilt (I think 1/4 and 1/2 degree) and better signals close in. So I was convinced of the value of a small amount of beam tilt. (The station since installed a new transmitter and antenna but still has signal problems.)

>How does it effect the signal and what would a beam tilt of
>Horiz: 100 Vert: 100
>mean to a station's signal?

This doesn't look like an indication of beam tilt to me. It just looks as if a station has an ERP of 100 kW, and a signal that is both horizontally and vertically polarized, as most FM's are.

I'm sure there will be several responses to what electronic beam tilt is, but in the South I have run across what I call, admiringly, "Mexican Beam Tilt".

There is a station near Galveston that felt they could cover Houston better if they had beam tilt, so they unbolted all the bays but the bottom and wedged metal shims that were progressively thicker as the higher loose sections were strapped back to the tower. I understand the top shim was over 8 inches thick! The bays were on the Houston side of the tower, of course, so the angle of radiation was forced down in that direction.

I don't know the actual field measurement information, after the modification, but it did seem to have better penitration in the Houston area.

AIRWAVES MEDIA PUBLISHING (rrb@clm.aiss.uiuc.edu) wrote:

: What does it mean when an FM station uses a beam-tilt?

Picture the pattern radiating from a single bay antenna as a globe - equal power in all directions (N,S,E,W,up,down). The ERP is equal to the transmitter input power for single (horizontal) polarization. If you're dual polarized (horiz & vertical) the ERP is equal to half the transmitter power.

As you add bays, power that is otherwise wasted going up and down is directed out towards the horizon. ERP in the lobe goes up, and the globe shape becomes squashed.

If you have a large number of bays, the beamwidth of the main lobe can become pretty narrow, to the point where if the antenna is on a mountaintop or on a high tower, the majority of the power can bypass the market, being sent towards the horizon.

Beam tilt takes the main lobe and aims it downward towards the market, instead of straight out towards the horizon. The most common amounts are between 3 and 6 degrees of downward tilt. In theory this can slightly reduce the station's coverage area, as the maximum power is no longer being aimed at the horizon, but in almost all cases the effect is to give more signal within the licensed contours.

Null fill is a related cousin, where the rated gain of the antenna is slightly de-rated (requiring slightly more transmitter power to make ERP) and the excess is directed downward to fill in nulls between the main and secondary power lobes.

What sorts of complaints were filed? I would assume it had to do with interference, but I'd be curious to know.

I'd be curious to see a day coverage map for WHP and WCHS. Is one avaliable anywhere? I remember getting WCHS in the early AM (5ish) about 45 miles SSW of Harrisburg, PA in Shippensburg, PA before WHP went on its day power. Then you could forget getting anything else other than WHP. It has such an awesome signal. Both WCMB and WHP are both 5kW undirection day power and WHP does so much better. Incredible (at least to me!)

# 788. Wolfman Jack - Obit & additional info

Newsgroup: rec.radio.broadcasting
Date: 1995-07-05 00:00:00 UTC
From: "Max Cacas - NPR News Ops - Wash. D.C." <MCACAS@npr.org>
Message-ID: <3te27h$ho2@vixen.cso.uiuc.edu>
Source record: 30767

For those who missed the news from the weekend, "Wolfman Jack" (real name: Robert W. Smith) died on Saturday, July 1st at his home in Belvidere, NC after a heart attack. He was 57 years old.

He'd just returned home after a 20-day tour to promote his new book "Have Mercy", and his regular weekly on-air Friday night oldies show syndicated by Liberty Broadcasting. Originating from Planet Hollywood in Washington, D.C., the show was broadcast over Liberty-owned WXTR-FM (Xtra-104), and 55 other stations. He had done his last program this past Friday evening.

The Wolfman was a native of Brooklyn, NY, and made his name in radio over XERF-AM, a Mexican top-40 250,000-watt "flamethrower" heard over much of the U.S. His popularity took off after an appearance as himself in George Lucas' classic movie, "American Graffiti". His career went on to include stints in several television shows.

Monday's Washington Post carried a lengthy "Appreciation" of the Wolfman's life and career. The Post's "On The Dial" (Radio column) on Tuesday (7/4/95) went further to talk about Wolf's most recent renaissance: Mark Lapidus, the syndication director for Liberty Broadcasting, noted that while stations in Tulsa, OK, and Missoula, Montana chose to drop the Wolfman for "being too blue" (whatever the hell that means!), Wolf was nontheless excited by the prospect of being picked up by stations in L.A. and San Diego. Lapidus also told the Post that his Hollywood agent was fielding inquiries about movie rights to his new autobiography.

The Post says Wolf's sidekick on the Friday evening Planet Hollywood gig, Marilyn Thompson (middays on Xtra-104), is "devasted" by his death. She talks about him as being "a friend...he connected with people emotionally. I'm not going to meet anyone like him again." The Post says Wes Johnson of co-owned WHFS-FM, a fellow who wrote bits and did voices for Wolfman's "Planet" broadcast, has a special memento of the Wolf: the last signed copy of his book.

The Post also says WXTR is planning to air a 4-hour tribute show this Friday beginning at 7pm E.S.T. No word on whether that show will be distributed to Liberty's "Wolfman" network, but I'd think its a good possibility. Also, the station is accepting on-line messages of condolence at dawolfshow@aol.com .

The newswires now report that funeral/burial services for Wolfman Jack will be held this Saturday afternoon , at his home on the Belvidere Plantation in Belvidere, N.C. at 4pm. (Contact: Evans Funeral Home, 919-482-7474). The service will be led by the Rev. Chuck Stratton, and will be open to the public. Memorial contributions in the name of Wolfman Jack are being received by the Museum of TV and Radio (25 W. 52nd St., NY, NY 10036).

Wolfman Jack is survived by his wife, Lou Lamb Smith (aka "Wolfwoman"), and
two children.

He will be missed.

Bob Smith of WXXI Radio wrote:

:]]Sounds like change is afoot at WUFX (103.3), recently purchased along with :]]97Rock by Charlie Banta's group....

Quite right, Bob. What was "the Fox," is now "the Edge." At least by name. But, if you ask me, it doesn't really have "the Edge" that CFNY has. A lot of the music they're playing (about 60% I'd say) is the same as they have been playing--more like modern rock. The "alternative" adds are not really that far out there. I've heard many tunes that were CHR when they first came out in the early->mid eighties. Also, they're playing a load of U2--when was the last time they were called "alternative?" This seems more like "lite alternative" to me.

The change itself was kind of a surprise. I'm amazed I hadn't heard something about it before it happened. I heard it first on my radio before I heard from any radio cohort. This surprises me because I used to be Chief Operator for WUFX and its AM WWWS, and Rich Communications Principal Engineer for the pair, up until the FMs were sold to Banta & co. The staff apparently didn't have a clue, either, and weren't even tipped off when the station remote broadcast camper went in for repainting the day before "D-Day!" There were three jocks let go with the change, and I do feel bad for all three. But, I feel worse for "Iron Mike" Bennson. He's a great jock, with great pipes, and a genuinely good guy. I'm sure he'll turn up somewhere soon.

On a related topic, Banta's purchase of the two FMs included the buildings they shared with WGR & WWWS. Now working exclusively with the AMs, I've spent the last few weeks working with Keymarket engineers moving the WGR news operation and studios into the building already shared by WWKB and WKSE. Sort of like cramming four round pegs into a square hole.

What happens next depends on Congress (Keymarket has a sales agreement for WGR & WWWS, but Rich's maintains ownership-for now). River City will likely have something to say about it as well. I've heard the closing of their purchase of Keymarket is moving right along.

In article <3t7oi2$fid@vixen.cso.uiuc.edu> KUZZ1@aol.com writes:

>In 1973, I bought Wolfman's syndicated show for WKAL AM/FM in Rome, N.Y. The
>idea of putting local drop-ins into a syndicated show, so common now with
>satellite-delivered programing, was new then. We even had Wolf doing local
>weather forecasts. I'll never forget the first night we put him on the air,
>the parking lot of the station filled within 15 minutes with people wanting
>to meet him...and of course, everything was on tape.

We did the same for the show nearly 20 years later for WRQQ-AM 1470 (Farrell, PA, near Youngstown, OH), when I was operations manager. Wolfman said "Smokin' Oldies, AM 1470" like no other human being on earth. I can't even do it justice in type.

And a little automated oldies station with no live local programming, save for high school football on Friday night, got most of its few calls from people wanting to talk to the Wolfman about a request. They had to call information for the number. We never gave it out on the air and the new phone book hadn't been printed yet. Perhaps some 15 years after his heady days of national fame, the Wolfman could pack in an audio crowd.

We'll miss you, Wolf.

## 792. Wolfman Jack

Newsgroup: rec.radio.broadcasting
Date: 1995-07-05 00:00:00 UTC
From: Grant Hudson <ghudson@voicehouse.com>
Message-ID: <3te27k$ho6@vixen.cso.uiuc.edu>
Source record: 30771

I first met him during my years at CKLW. That meeting came some years after my very first encounter with him, however. And I will never forget it.

It was many years ago in the wee hours of a Sunday morning. I was rolling across the Pennsylvania Turnpike in the middle of nowhere...in the mountains somewhere between New Stanton and Breezewood.

I was twisting the radio dial when I was smacked with a signal so strong I could have been driving under the tower. It was almost 4 a.m. It wasn't making any sense to me. I was trying to put a map together in my head to figure out where this signal was coming from. And whoever it was was rockin'.

Out there in the middle of nowhere were mostly daytime signals or low-power signals and I wasn't close enough to any of them to explain what I was hearing.

Who ever it was was at the upper end of the dial. Way up there.

Then the jock came on. It was nothing like I ever heard before. Rockin' on and bayin' at the moon. It was, of course, the Wolfman rolling across Appalachia from XERF in Ciudad Acuna.

I stayed with him (or rather he stayed with me) for about a half hour when the signal disappeared into the darkness about as rapidly as it appeared.

This industry has another mighty big hole in its heart right now...and it will miss the Wolfman. But the world is also less of a place for the passing of Bob Smith. He was a good man.

Grant

## 793. Re: My friend, Wolfman Jack

I had the pleasure of meeting, and spending a considerable amount of time with the Wolfman, back in 1972-73 when I was at Bearsville Records, and Todd Rundgren had a song called "Wolfman Jack" on his "Something Anything" album (and as much as I love The Guess Who...this is the real deal!) He was a really engaging character and I was really saddened to hear of his passing.

Message-ID: <3te27m$ho8@vixen.cso.uiuc.edu>
Source record: 30773

I had the pleasure of meeting Wolfman at one of his performances at Planet Hollywood in D.C. Really friendly and down to earth. Many jocks hardly ever talk to people at remotes or they project their egos and regard their listeners and fans as nothing. Not Wolfie! He would talk to anybody about anything. Nothing was too idiotic. No question too stupid. He loved his fans like they were his family and treated them as such BOTH on the air and in person. He will be greatly missed by both fellow broadcasters and fans.

## 795. Imus comments on Wolfman's death

Newsgroup: rec.radio.broadcasting
Date: 1995-07-05 00:00:00 UTC
From: TRRadio@aol.com
Message-ID: <3te27n$hob@vixen.cso.uiuc.edu>
Source record: 30774

I was interested to hear what Imus would say about his death, having just had him on his show recently. He's on vacation, but the following are comments he made in an article in the 7/3/95 NY Daily News to David Hinckley. The article is verbatium:

Headline: I-Man says Wolfman was The Man

Imus can rattle off a fistful of DJ's who have created particularly good radio over the years: His pal Robert W. Morgan, Chuck Browning, Dick Biondi, Dan Ingram, early R&B jocks like Huggy Boy, Hunter Hancock & Magnificent Montague. "But Wolfman Jack was the best. Number One. Period."
He was also a nice guy, Imus says. When he visited I'mus' radio show on WFAN two weeks ago, he asked if anyone minded before he lit one of the Camels that was helping set up the fatal heart attack he suffered Saturday in North Carolina.
Imus was friends with Wolfman for 25 years, and a fan since the early 60's when Imus lived in Palmdale, CA, and Wolf's manic rap invaded America nightly on 250,000 watt XERF (Isn't that a mistake???-TR), a border station just south of Del Rio, TX, which Imus would later immortalize as 'the gold buckle of the Bible Belt' (in his character 'Billy Sol Hargis'-TR).
"I wasn't a big radio fan," says Imus. "Wolfman was the first jock with whom I felt a personal connection. He was talking directly to me."
"You have to remember, border stations were a mess. Wolfman would be on, then some preacher, someone selling baby chickens, then Wolfman would be back. At 3 a.m., he had a powerful effect. Of course, so did the preachers."
When Imus went into radio, then, "I just tried to do what Wolfman did--not realizing the reason he could say anything he wanted was because his station came out of Mexico."
Still, things worked out. When Wolfman howled, "Get Nekkid!", Imus in effect asked callers if they'd taken that advice: "Are you naked?" Thus he covered the two areas in which Wolfman excelled: The leer and the phone call.
"He was the best I've ever heard on the phone with listeners," says Imus.
Like all great jocks, Wolfman simply made every element of a radio show better: the callers, the music, even the ads. If he was easy to satirize, that's because he left an indelible mark.
Wolfman didn't look real good on this last visit, Imus says. The 40 pounds he had lost--he had another 40 to go--"made him look old." He had trouble focusing, and then there were the Camels. But Bob Smith fromBBrooklyn, reborn Wolfman Jack, got his money's worth in this life, and gave it too.

## 796. Wolfman Jack

Newsgroup: rec.radio.broadcasting
Date: 1995-07-05 00:00:00 UTC
From: dk@crl.com
Message-ID: <3te27p$hog@vixen.cso.uiuc.edu>
Source record: 30775

I first heard Wolfman Jack in my bedroom in a small town amid tomato fields near San Francisco in 1964 or 65 coming from XERB in Rosarito, BC. He played music I'd never heard before -- well, I *had* heard it, but not the original R&B versions. I'd heard the prettied-up Pat Boone whitebread versions of the songs.

Wolfman introduced me to a different kind of music: black music. It had been there all along, but I didn't know it. This helped me to learn that politics play an important part in our culture -- what gets played on the radio and seen in movies and on TV is the result of what the dominant culture wants us to have. Wolfman Jack was a man who broke the rules, and had to go to Mexico to do it.

There was also that certain romance of listening to an exotic station so many miles away as we worked in the tomato cannery during the summer and compared fantasies of who the Wolfman really was. I'll miss him.

## 797. Technical question

Newsgroup: rec.radio.broadcasting
Date: 1995-07-05 00:00:00 UTC
From: scottshow@aol.com
Message-ID: <3tfm6d$a4p@newsbf02.news.aol.com>
Source record: 30776

I don't know if anyone on this newsgroup can help me or not; however, I NEED HELP. This problem concerns a microphone processor used on-the-air in a commercial radio broadcasting station ...

We have a new microphone processor that has yet to be set correctly.

We're looking for that larger-than-life-highly-compressed-ballsy-suck-you-in sound, a la the old Z-104/Frederick, MD. The problem: here's what we have to work with ...

DBE-1000 (bassband expander)
OPTIMOD 8100A
TEXAR PRISM
AIR CORP PRO ANNOUNCER MIC PROCESSOR

We also have a VALLEY and a SYMETRIX 528 free in the building.

The station's contract engineer has set up everything but the mic processor perfectly (at least the music and spots sound great). But, we need help setting the mic processor. If you have any suggestions please e-mail scottshow@aol.com privately.

Or fax a diagram of settings to Scott Sands at 601.426.8255 or voice 601.544.6494.

Your help is APPRECIATED. Major thanks!

The Scott (Sands) in the Morning Show on WNSL-FM

# 798. Interstate 70 Radio Watch (4-Jul-1995)

Newsgroup: rec.radio.broadcasting
Date: 1995-07-05 00:00:00 UTC
From: transvox@interstate.net
Message-ID: <3te267$hlp@vixen.cso.uiuc.edu>
Source record: 30871

Written July 4, 1995

Cranking out 50,000 bytes of data (well, more like *five* thousand!)
from this weekend's journey to my central Missouri branch office....

* Warrenton's KFAV(FM) has switched to yet another format.
Late last year, "V-100" dropped its original contemporary-hit format for
classic hits. Within the past month, KFAV moved to what is best
described as an album alternative format. Its new slogan, "the best
music of the 70s, 80s, and 90s," does not seem typical for such
a format. Moreover, KFAV still calls itself "V-100" on the air.
KFAV and co-owned KWRE(AM) provide the only locally-based radio service
for St. Louis' fast-growing western suburban counties, Warren and
St. Charles.

* St. Louis contemporary-hit station WKBQ-FM has adjusted its format
in the wake of the departure of program director Lee Cruze, who went
to Birmingham, Alabama. All modern rock and dance crossovers have
been purged from "Q-104"; what's left is sounds like an adult contemporary
station with a few 80s oldies straggling along. The station has also begun
using jingles intensively, and rarely says it has "the planet's hottest
music," as it once did.

* St. Louis modern rocker KPNT(FM) has taken the first step toward what
may be the next hot contemporary format--90s oldies. A Sunday midnight
dance mix program from an Illinois nightclub on "105-7 The Point" features
late-80s and early-90s dance tunes (the Shamen, Baby Ford, Depeche Mode,
the KLF, etc). Remember...you read it here first.

* From new formats to old formats: Album-alternative WVRV(FM), "The River",
has brought an old description back to the St. Louis market:
"progressive rock." It's not known how heritage album-rocker KSHE(FM)
feels about this; after all, KSHE was St. Louis' progressive rock pioneer.

* Longtime Fulton farm-to-market station KFAL(AM) has reduced the amount
of contemporary country tunes on its playlist. Judging by the station's
programming, KFAL is intensifying its focus on traditional country music,
including oldies, selections from new artists, and bluegrass. The
result is stunning, and gives the station a strong identity on
Central Missouri's overcrowded radio dial. KFAL was the pioneer country
music station in the Columbia-Jefferson City area in the 1960s, and
still has live bluegrass shows on Saturday mornings. The format
could be a big winner on FM--however, KFAL's FM operation, KKCA, continues
to limp along with satellite oldies.

* Columbia's news/talk legacy station KFRU(AM) has dropped its post-Limbaugh local talk show in favor of Dr. Laura Schlesinger's network show from 2 to 4 pm. The move leaves one co-host, Charlie Wilkerson, out of a job. The other co-host, Al Germond, is a co-owner of the station. KFRU was dissatisfied with the overwhelmingly conservative viewpoint of most of the show's callers, most of whom seemed to be holdovers from the Limbaugh relay. KFRU management also wanted to lighten up the station's afternoon schedule. KFRU has also scaled back a cooperative arrangement with KMIZ-TV; the TV station no longer supplies morning sports reports to KFRU.

* Across Paris Road and the Columbia Terminal Railroad, Columbia's other occupant of the AM dial, KTGR(AM), now cuts away from its relay of young-country KCMQ(FM) to relay something else: the O.J. Simpson trial. Whenever Court TV is covering the trial, KTGR will carry the cable service's audio feed. Station officials tell Columbia media that the arrangement is not costing KTGR any money, and there are no plans to sell advertising during the audio feed.

* Downtown at the former Tiger Hotel, once the home of KTGR-AM/FM and now a retirement center and base for numerous LPTVs and FM translators, K280EJ was observed testing last week. The translator, which will relay "Christian" contemporary KLTE(FM) from Kirksville, was not on the air during the long July 4 weekend.

* Sunday night, July 2, I was able to monitor severe storm coverage from KSAL(AM) in Salina, Kansas. The 5,000-watt station at 1150 kHz normally goes directional at night toward the west; however, because of tornado warnings, the station remained nondirectional. An in-studio anchor coordinated detailed, knowledgeable reports from two field spotters, one of whom described the formation of several wall clouds, precursors to funnels, as well as the formation of one funnel cloud that touched down briefly near KSAL's transmitter site east of Salina. It was an excellent example of well-executed local service.

I think some of the fear on this newsgroup over automation is probably not justified. You are talking like this is something new, which it isn't.
In the late 1970's, the Washington state FM dial was bristling with automated FM Top 40 stations, not just in places like Yakima, Walla Walla, and the Tri-Cities, all of which are relatively small, but also in the state's three largest cities, Seattle, Spokane, and Yakima. Most of these stations no longer are automated, due to market pressures. A couple of them (KFFM Yakima and KIOK Tri-Cities) are still in the Top 40 format, but are now doing it live and local. Several others were forced to change formats, because they couldn't compete in a more competitive market with automated programming (how many people from Seattle still remember what happened to KYYX?).
In view of this, I would hope that at least some of the folks running automated or satellite delivered stations are viewing this as a temporary thing while they're building their stations. And listeners can win when they live in an area with such a station--speaking for myself, I'd rather listen to an automated Top 40 station than live in an area that doesn't receive this format. And with listener support and good management, it is likely that this station will eventually become live and local.
As for the folks who think they can run an automated station forever, with no local input...they probably won't be around for long.

Tom Desmond

Years ago (like +-20) I worked at a marvelous little AM/FM Combo in Norwich, NY. We had an extremely small but great staff, and were owned by a local businessman, with studios on the third floor of an office building right in downtown Norwich, with WCHN in gold leaf on the windows. We did a little of everything back then...a little country, a little adult contemporary, and an afternoon classical music program(!), all in a 16 hour broadcast day. (We signed off at 10PM, because we had high school kids playing tapes at night, and they couldn't work after 10 on school nights).

I'm sure the local businessman has sold the station, but wondered what was going on there now? And, anybody know these names:
Nick Marasco (Chief Engineer), Tom Sherman (Announcer)?

Jack Moore

I've been reading the various stories with a chuckle and figured I'd weigh in with my own:

Summer of 1980--I'm working at a small Central Ohio station. The studios are downtown, the transmitter is a shack in a cornfield about 15 miles out of town.

We'd had a couple of big thunderstorms the previous day & I had worked the 8p-2am shift. Around 10am, my PD woke me up with a call asking me to come in for the night shift. Little did I know what was in store.

When I pulled up to the station, the owner was getting ready to load the commercials into his car to take to the transmitter. Our studio link to the tower had gone bad, and GTE was working on it. In the meantime, our PD and the regular night guy (who worked the midday shift as a sub) were out at the transmitter spinning records using our mobile disco setup. The engineer was rigging a cart machine to play commercials and the owner was running them out to the transmitter. My duties--stay in the control room and keep a record feeding down the line so GTE can find the broken line and fix it. My boss (the morning guy also) leaves around 8pm, then calls to tell me if the problem's not fixed by 11pm, tell the overnight guy to stay at the studio, and go out and do the overnight show from "Studio Z" as we were calling it. (The overnight guy had been there about a month and a half and had already blown off a jock meeting. The PD didn't trust him, and would fire him about a month later.)

Off to the transmitter I go--I'd never been there before and actually it was one of the nicer sites I've seen. We were set up in the garage portion of the building. Around 3 am--I described my situation to my listeners this way "Picture the Disco Road Show set up in your garage, except I'm out in the middle of nowhere, and can play it as loud as I want to and won't distrub the neighbors". Of course, I played a few records we didn't normally play on your playlist, but hey, I was entitled, and didn't stray too far from the playlist (My favorite non-playlist song I playedl - I Was Made For Dancing by Leif Garrett).

Around 4:30a, my boss called--it seems GTE had stopped working on the problem since the overnight shift had no idea what the other shift had done. This wasn't funny anymore. The AM Drive show had to be done out there. My boss, who wasn't exactly a morning person, was a bear when he arrived. He told me to go home, but the catch was I was to drive the Road Show van back to the station. I owned and always had driven an automatic transmission car--I'd never driven a column shift manual transmission van before in my life. The ride back was a rather interesting experience, made more so by the lack of sleep. When I got back and punched out--I'd been on the clock for 11 and a half hours. What an experience. When I awoke at 4:30p, my boss said I could

go back home (I crashed at a friends place in town). I then had to relieve my buddy at our college station, which never signed on the night before because he was in an accident and totalled his car, but that's another story.

BTW--I became very familiar with driving that van--I became the only personality who would go out with it, and was doing a show every week during the rest of the summer & fall. I actually became quite comfortable driving it.

Is this the same Jon Summers who worked at WKBW-1520 Buffalo in its Top 40 heyday and, before that. at KQV in Pittsburgh?

I also heard the name Don Berns mentioned on Hot 103.5 in Orangeville, Ontario, is that the same Don Berns as was at CFNY 102.1 earlier?

Just curious,

## 803. Re: Buying a station

Newsgroup: rec.radio.broadcasting
Date: 1995-07-05 00:00:00 UTC
From: Pat Ryan <rentadj@ix.netcom.com>
Message-ID: <3te26b$hm3@vixen.cso.uiuc.edu>
Source record: 30876

The days of the highly inflated radio station sales (10+ times cash flow) ended years ago when the banking laws changed to discourage banks from participating in these highly leveraged transacations (HLT's). Several groups were buying with the intention of selling within a few years (before any principal payments were due, they'd usually pay interest only) and making several million $'s.

When the banks stopped participating in these HLT's, there was no more financing available and in this game of musical chairs, the last owner ended up in deep you know what. The banks generally renegotiated to avoid taking a big loss.

There's more than you may have wanted to know, but now... recently 6x cash flow has been a more reasonable number, but obviously no one wants to pay more than they have to. Research what was paid for the station and when and try to develop a reasonable number from there. Ignore all calculations based upon value of equipment and stuff like that. It's useless in this business. Find out what they're billing and netting and make sure you can pay the note. Once you buy, then look for places to do any cost cutting.

Clear Channel has been extremely by finding either profitable stations in small markets or more recently, high overhead, underperformers in big markets. Don't look at trying to take a station that may be on a hot streak.

Good luck,

Pat Ryan

We're maligned and misunderstood, but never boring. I co-host a talk show on WWCR shortwave that is designed to deal with truth...a rare commodity. We are currently looking into syndication on either a shared-donation or commercial basis. If your station is looking for something to keep them listening every weeknight at 7 PM eastern, let us know. We want to compile a list of potential affiliates.

Also, could use suggestions as to type of satellite downlink needed for your equipment.

Thanks.

>can anybody gimme information, who have the higher market shares in US
>radio :
>
>billboardTop40 hosted by shadow stevens
>or
>WeeklyTop40 hosted by Rick Dees
>
>
>

American Top 40 has been dead for a year here in the states, replaced by Rick Dees Weekly Top 40. AT40 is still syndicated overseas where it still has a large following. In the US, the show just died after Casey left and started his own show syndicated by Westwood One. I guess Casey's having the last laugh on this one--he left AT40 in a salary dispute.

BTW--Dees' does 2 versions of his countdown--a CHR and A/C, Casey does 3--CHR, A/C and Hot A/C

Bob,
Why is it that the responsibility for "serving" a marketplace falls on the AM stations in that market. Why is it that FMs aren't held to the same standard you propose for AMs?

Show me all the FMs in most markets with large news staffs. Show me the FMs in most markets that serve their communities with something more than a van that visits beaches or shopping malls to peddle some advertiser's promotion.

Show me the FMs that program niche formats rather than "Lite FM" or "Power 853" or "Kiss 102." Where are the stations actually doing something different? Frankly, I see absolutely no difference between an AM running satellite Talk and an FM playing recorded music and reading liners. Except that the satellite Talk station is more interesting than hearing the same 100 songs over and over again.

If AM stations have to have a government-mandated community service obligation, then ALL broadcast media must have it. Don't make an AM station owner lose his shirt because he can't be competitive against the FMs cranking out the 11th AC format in the market with "lifestyle" news that tells me who Madonna is sleeping with this week. Not my idea of community service.

Rich

## 808. Service to Communities (was:: Re: AM congestion)

} than a van that visits beaches or shopping malls to peddle some
} advertiser's promotion.

KTTS-FM Springfield Missouri.

KTTS is a great example of community service. They are a 100kw@1100' commercial FM (Great Empire) which has a 24 hour news staff, does extensive local news *reporting* (not just reading), is almost excessive in their *on the spot* mobile coverage of any threatening weather (I say excessive in a good way, we are all glad for the excess) by breaking format (they are a country station) and going full time with mobile-units driving right into the heart of storms to give on-the-spot coverage.

While their night time news staff is only one person (days they have about 6 on-duty) that is one more than ANY other area station including the 5000 watt, blowtorch AM talker on 560 (daytime coverage of 96 counties) KWTO which carries the usual garden variety assortment of syndie-talkers like Rush, Bruce, Jim, Dean, et-al).

KTTS news staff are on 24 hour call in case of an emergency too. I have heard 3 or more mobile units reporting during a major storm at 3 AM! Even while they are on regular format, they maintain a very strong community presence and give regular traffic reports, news updates and even lost pet reports.

Their signal covers from Rolla to beyond Joplin and from central Mo. to well into Arkansas (about a 100 mile circle around Springfield. They would go farther to the east except for co-channel KSHE in St Louis also 100kw). They are the EBS primary and they used to offer radios called the KTTS Storm Alert Radios which would trigger when they sounded their EBS tones (which they do every several minutes during severe weather which can't be good news for those who listen for the music <g>), but they do it because it is important to their community.

KTTS out-bills any station in this market and has held a comfortable #1 rating forever despite the strong showing of lower-powered, but

well-programmed KGMY running a CHR-style hot country format. KTTS's music is modern country, but not HOT country. They appeal to 25-54 while KGMY (My Country) has a younger skewing demo).

Their AM (5kw DA-N 1260kHz) is separately programmed all day, also live and local, with a more traditional country format. Both stations simulcast the news and weather reports and overnights.

} If AM stations have to have a government-mandated community service
} obligation, then ALL broadcast media must have it. Don't make an AM
} station owner lose his shirt because he can't be competitive against the
} FMs cranking out the 11th AC format in the market with "lifestyle" news
} that tells me who Madonna is sleeping with this week. Not my idea of
} community service.

I agree. I wish that regulations were not necessary at all. But it seems that despite the successes of stations like KTTS and other, more well known community servers like WGN, too many broadcasters (AM or FM) cannot seem to understand that the less you put into your station the less you will get out of it in the long run.

Sure you can boost the bottom line in the short run by cutting staff and running with a robot, but let some shrewd operator in the market compete against that robot with thinking, breathing, accessible humans that are in touch with the community AND provide a professional, well executed formatic product and you will see that the people will go where the people are.

Sadly, there is a precious few in this industry who understand the *long haul* as you do Rich. I have heard you say "show me 5 or more books before I make up my mind..." . I wish more in this business understood that.

Sincerely

William Pfeiffer

This is exactly what is happening in Oz. Although the number of licences
increases, the potential revenue pie does not. Result is mergers,
take-overs or simply stations going broke. Less revenue results in reduced
program quality, fewer jobs in the industry, and a creative meltdown. Take
a look at the New Zealand market deregulation. There, just about every
availabe frequency is up for grabs in a nation of only 3 million people.

If you really are scared about the potential outcome if we place
broadcasting at risk of unregulated monopoly/oligopoly control,
there's a simple answer...don't let a Republican win the White House
in 1996. All the GOP contenders are committed (by campaign money)
to turning the billionaire boys loose to buy up the airwaves (including
the public broadcasting airwaves that we taxpayers initially paid for,
but commercial interests now want to buy up for a song).
In theory a total competitive free for all ought to be wonderful,
bring us variety. In practice, history shows it always culminates in
a musclebound monopoly that serves no one except perhaps the
few who manage and control it. We ought to re-read the history of
the robber barons and trusts of a hundred years ago, if we want to
see how destructive monopolies can truly be for everyone INCLUDING
most of American business.

: soon as possible for profit.

The other reason for the 80's "land rush" was that people started to notice there wasn't any more land. 80-90 came into effect because the band was filling up. Up until that time, if you wanted an FM station you could get one for the price of the equipment it would take to put one on the air.

It's the same thing that happened to California real estate during the same period - restrictions were imposed on the amount of new housing that was placed on the market (Proposition 13, environmentalist and NIMBY concerns, and the resulting scarcity drove up the value of available, used properties.

The BIG question...is New City serious this time with 94.5 in Orlando?
Do they really plan to put the personnel and promotional muscle behind
Star to make it a viable force in the over-radioed and ultra-competitive
Orlando market, or is it going to be nothing more than a "poor stepchild"
to co-owned K-92 (WWKA), much like 94.5 was in it's previous incarnation
as B-94.5 (WCFB)?

From: dk@crl.com
Message-ID: <3te26p$hmp@vixen.cso.uiuc.edu>
Source record: 30889

National Public Radio (NPR) has begun to feel the crimp of reduced funding from the Corporation for Public Broadcasting (CPB), and will soon end these programs:

"Afropop Worldwide" (world beat music show)
"Horizons" (public affairs documentaries)
"Crossroads" (public affairs documentaries)
"Bluesstage" (live-concert blues music show)

NPR apparently wants to specialize in classical and news, eventually eliminating jazz, blues, and other music, most magazine and documentary programs, and "ethnic" programming (read: non-white, non-yuppie).

"Fresh Air" will stay, as will the morning and afternoon news magazine shows.

My opinion: NPR will become the PBS of radio -- bland appeasement of the rich.

Kahn tried to install Powerside on a local kilowatt daytimer a few months ago. It sounded about like cranking the clipping control a couple of notches past "10".

When the engineer complained about the distortion, Kahn said that it showed that the system was working properly, and the the added sideband power was overloading his reciever.

The station was non-directional with an OK antenna, and Powerside didn't seem to do anything that couldn't be accomplished by cranking the clipping level all the way up on a conventional processor.

Sideband "cancellation"? Is there indeed cancellation? I'd
expect sideband distortion (amplitude variation, phase variation, and
pattern variation), but not "cancellation". perhaps I'm misunderstanding
the term.

> Without
> having thought it through, it is clear that with less sideband energy, a

Good point! Less sideband power WOULD supposedly require less
carrier, allowing mistuning of the receiver, dropping carrier amplitude.

> Unless I'm missing something however, single sideband transmission also
> results in synchronous phase distortion because the main carrier stays put
> only so long as the vector addition of the two sidebands plus carrier adds

> detectors, where the carrier can be regenerated and held in a fixed relationship
> to the audio.

I agree that there would be "quadrature distortion" on an
envelope detector. That is why there's a "C" in CQAM, making it
Compatible quadrature amplitude modulation. They predistort the audio to
try to compensate for the distortion an envelope detector generates.
This predistortion, however, would seem to generate intermod and audio
harmonics. The intermod would supposedly be cancelled by the distortion
in the envelope detector. The audio harmonics would be removed by the
NRSC filter, eliminating their benefit.

> I made some custom mods and added a CBS DPE (remember them?) for consistency

Yep, was that something like a "dynamic program equalizer"? I had one of those with a CBS Audimax and CBS Volumax. We replaced it all with the original Dorrough DAP in the early 1970s. Back in those days I found that we had trouble meeting audio specs (+/- 2 dB, 100 Hz to 5 KHz) at the low end due to poor transformers in the Audimax and Volumax. We had the "new" "slimline" units that were only one rack unit high. Another station in the area had the old taller units. Their audio was flat to 30 Hz.
Back on SSB w/carrier, I'll see if I can find the time to run a spice analysis on what the output looks like on an envelope detector and on a synchronous detector. That's the kinda stuff I will eventually get to in the Theory series in Radio World.

Keep your eyes on KKBH, 102.9 The Beach in San Diego.

I've been hearing about this station. What's the format? Is it pure
70's Oldies, or a mix of 70's and 80's?

-Drew in the Twin Cities-

## 824. Options to secure 2 way communications?

Newsgroup: rec.radio.broadcasting

Maybe some of you folks have an idea we haven't thought about,
to remedy the following situation:

I work for a small independent traffic reporting service. Radio
stations that have not subscribed to our service are using our
info by monitoring our 2 way frequencies. We are looking into
securing(scrambling?) our (and our affiliates) tx/rx over 2-way
radio in the UHF band . Is this security issue important enough
to be considered at your station? Are the _Big Boys_ of traffic
doing this in your market? Are there any innovative, but simple
and _cost effective_ ways to secure this info? (Like, what
about using an FM subcarrier frequency for tx/rx so scanner
monitors can't pick it up?)

We want to eliminate the need for legal recourse!

advTHANKSance for the bandwidth and your ideas.

## 829. What is "beam tilt'?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-06 00:00:00 UTC
From: richwood@commspec.com
Message-ID: <3tfgo8$o1a@vixen.cso.uiuc.edu>
Source record: 30702

IA>What does it mean when an FM station uses a beam-tilt?
IA>How does it effect the signal and what would a beam tilt of

Bill,
Let me see if I can butcher this properly. When a station uses a high gain antenna to boost its ERP rather than increasing its transmitter power it causes an "umbrella" effect close to the antenna. Under the "umbrella" the signal is weak. By tilting one or more of the antenna elements it's possible to fill in this area.

An antenna gets its gain by concentrating its radiation so it doesn't radiate up. It also restricts its downward pattern (unfortunately) so the unbrella is created. Often the signal at the base of the tower is weaker than the signal miles away.

Over the last decade or so stations have tried to use unity gain circularly polarized antennas. We used the first one, built by RCA, at WJIB, Boston. It produced a terrific signal because it was all real power rather than antenna gain.

I worked for WVBF (formerly WKOX-FM) when their old antenna site was in operation. A 5kw transmitter with a 12 bay antenna produced 50kw ERP. A terrible signal.

Hi,

I am a freelance radio-journalist in Berlin, Germany. I have heard of the voice processor made by a firm called DBX, the version number is 286. Does any know this product? Who works or has worked with it? I think it*s price should be around ' 600,- (at least, round about 800,- Deutschmarks) which is incredibly cheap. But is it any good?

Or do you have any other recommendations when it comes to voice-processing at a reasonnable price?

Thanks for taking care, and do answer me also via e-mail so that your replies don*t only appear in this board but also in my mail account. Thank you.

Yours Florian Grolman, Berlin, Germany.

I had a chance to meet the Wolfman 2 weeks ago; when my firend brought him into his town in rural Indiana for an appearance. Since I am a radio junkie, this was going to be my chance to meet the radio pioneer and legend.

Anyway, I was to drive down from Chicago that Saturday. Unfortunatley, my car had a flat tire. It required replacing the tire instead of repairng it. For this, I had to limp the car back home to Milwaukee. I suppose I could have made it, but after dealing with the car, I figured I would just go down next year when my friend brought him back again. Now I'm kicking myself because my friend told me that meeting and talking to Wolfman Jack was one of the most interesting and inspirational meetings he has ever had. Now I will never be able to partake in the history or stories that the Wolfman had acquired over the years.

Yes it's my loss. We are never garunteed tommorrow. If only I had made a little more effort. If only.....

First of all.... let me say how sad I am for the passing of one of the truly great human beings I have met... WHO genuinly took your hand and was glad to meet you... Bob Smith.. aka Wolfman Jack... was that person...

In 1991... Evergreen had changed one of its stations here in Dallas from CHR to Oldies... and on Saturday Night would bring in Wolfman Jack to do the show live from their studios.... On a December night at Texas Stadium... KODZ thru a party for all of the Dallas/Ft. Worth radio industry.... and everyone was there... all the execs and Account execs... as well as jocks who just wanted a good reason to get out...

I was at the time working for 1190 KGBS... and had always been a fan of Wolfman Jack... I impersonated him when American Graffiti came out.. and all the schools were doing SOCK HOPS... and all.. (I was a mere 14 when that movie broke)... So when the Legend walked into the room.. the place erupted.. and he was there to sign autographs and talk with everyone and anyone... it did not matter....

When I walked up to his table... I asked him for an autograph.. with nothing to write on.. I picked up a green napkin.. and I said to him that HE was a true insperation to me to be in the business.... and he along with my Father who was also in radio... taught me the tools to be sucessful.. and the one thing that Bob Smith passed to me as far as advice goes..."Don't EVER turn down a gig". Along with "Don't ever let the Bastard know he won"...

I will miss listening to the sounds that make American Rock-n-Roll what it is.. Wolfman Jack is as important to the music industry as Buddy Holly... Chuck Berry... Elvis.. the Beatles or anyone else... HE IS an American ICON.. and will be missed by those of us he touched and to those who will only know him from tape and record..

IF there is a Rock-n-Roll Heaven.. then they now have someone to keep playing the music..

Jay Lloyd...

Greetings from Long Beach Island!

After 32 years as public affairs officer at the Defense Industrial Supply Center up in Northeast Philadelphia, I took my early retirement and returned to my original love. . .broadcasting. I did a cold read and some AP rewrite for Doug Doyle, News Director for WOBM AM-FM in Toms River and was hired as a News Anchor on the spot. Been with them since September. . .a very serious news operation and a very nearly clean sweep of the RTNDA - Associated Press news awards in May.

I vividly remember our several conversations and your excellent voicers and wraps on DISC over the last 15 years. You are indeed KYW's consummate Suburban Bureau Chief!

Having been in Bermuda many times throughout the 1970-85 era, I am fond of Zed-B-M and wish you well in the search for the missing "reunionees."

Sorry to post a seemingly spurious E-mail, but I wanted to share my excitement at returning to a real news operation, wish you well personally and professionally, and invite you to be my guest for a VIP tour of WOBM's news center at your convenience. Oh yes. . .best of luck in your ZBM reunion preparations!

I am adding a new service (one of many) to the ever popular AIRWAVES
web page. Help Wanted/Positions Wanted.

If you are a serious seeker of a position, or you have a position that
you would like to fill, please send me the details and Ill post them
to the AIRWAVES JOB PAGE.

Here is the deal...

1) Send email to employment@airwaves.com.

2) Use a descriptive subject that says one of the following...
A) Help Wanted: Brief Description of opening
B) Position Wanted: Brief Description...

Note: Unclear subject lines may be omitted, and they don't say a lot
about your ability with words...

3) Letter should be 100 - 300 words (I wont do a word count, but
brief and to-the-point will give the best impression)
1 - 3 screens is plenty.

4) Include your....
A) Full Real Name
B) Postal Address
C) Voice and/or Fax Phone (voice preferred)
D) Email address
E) If offering a job, your company name and title.

5) No resumes, but you can include a URL to your web or FTP site if
there is material there (resume, picture, sound clips etc) that
might be of assistance.

6) If and when you get a job, write and have your listing removed. It
will be removed in 30 days anyway.

---

Your listing will be available in hypertext format to anyone reading
our pages. Any URL's or email addresses will be live hyperlinks.

I will be installing that service very soon (like maybe tonight) along
with a brand new radio page and a bunch of fun stuff. We already have
installed an 'email notification program' (optional) to alert you
to changes in AIRWAVES pages.

Mail your entry today. EMPLOYMENT@AIRWAVES.COM

## 838. Moberly, Missouri stations remain on the air

Newsgroup: rec.radio.broadcasting
Date: 1995-07-06 00:00:00 UTC
From: transvox@interstate.net
Message-ID: <3tfgng$nva@vixen.cso.uiuc.edu>
Source record: 30779

The tornado that extensively damaged a ten-block area of downtown Moberly, Missouri on July 4 spared radio stations KWIX(AM) and KRES(FM), whose studios are located in downtown Moberly.

KRES was on the air as usual this morning (July 5), broadcasting its regular schedule of programs, as well as announcements relating to the tornado's aftermath. Typical announcements included notices from employers telling workers to stay home, disaster assistance locations, and urging listeners to limit telephone use to emergency calls.

The station indicated that co-owned KWIX was also on the air. The KWIX/KRES studios are on West Reed street, at the center of the tornado's path. The stations' transmitters are northwest of Moberly.

The most severe damage suffered by KWIX and KRES were the loss of satellite dishes mounted on the roof of the studio building, leaving the stations without ABC or CBS network service.

Moberly's other station, KZZT(FM), is located on the southeast side of the town, away from the center of damage. At 8 o'clock this morning, it could not be determined if KZZT's operations were affected by the tornado.

KRES appeared to be operating at its full 100,000-watt power in mono; it could be received 135 miles away in Kansas City.

I am a Neve AMS equipped recording studio in Dallas Texas and have discovered a brand new product from Phillips Corp of the Netherlands <the people who invented the CD> It is a 20 Bit analog to digital and digital to analog convertor. Besides these functions it declicks and depops records it compresses, it expands, it fades, it sample rate converts, but mainly it is a CLARITY Machine anything thats run thru it sounds like its right in your face.Stations are using it on their main broadcast buss, on incoming phone calls,to restore old records, and for doing spots, I use it between my console and Dat. I am doing a national country album now and after hearing preliminary mixes the record company ask me if I bought a new console, its that good.Phillips makes 2 units, an unbalanced table top model that sells for 1700 and a balanced rack mount model that sells for 3000.00 after being a beta test site for the unit I am currently set up as a rep for the Phillips Co, and while my primary function is and always will be a recording studio I am making many new friends in the Radio industry by supplying this unit. If you would like brochures or more info email me your fax # or contact me directly, I am Michael Taylor of Manna Productions Dallas Texas 214 239 9636

# 841. Art Vuolo Talks about Byron MacGregor Nomination

Newsgroup: rec.radio.broadcasting
Date: 1995-07-06 00:00:00 UTC
From: "Michael R. Lewis - Farmington Hills" <lewismik@metronet.lib.mi.us>
Message-ID: <3tfgnj$nvm@vixen.cso.uiuc.edu>
Source record: 30782

Talking to Art Vuolo, president of RADIOGUIDE and the nominator of Byron MacGregor to the Radio Hall of Fame, I learned a whole bunch of neat stuff regarding the nomination.

Art said that Bruce Dumont of the Radio Hall of Fame had faxed him with a variety of tidbits. The support for MacGregor had elicited the "most response" since the inception of the Awards. Letters of endorsement for Byron, to Dumont and Vuolo, read like a Who's Who of Broadcasting and Business. Here's a sampling:

Gary Burbank of WLW
Scott Westerman of Continental Cablevison in Jacksonville, Florida
Bob Losure of CNN News
Gil Hill of Detroit City Council (and Beverly Hills Cop movies :)
Casey Kasem
Dave Logan of Sundance Broadcasting in Phoenix
Larry King
Gary Owens
Ken MacDonald of MacDonald Broadcasting in Saginaw, Michigan
James Davis of WZVU Oldies 107.1 Long Branch (Jim Edwards of CKLW)
Dwayne X Riley retired from WDIV-TV 4 in Detroit
Lee Marshall of Shadow Traffic
Edsel Ford (works for an obscure auto company :)
Herb McCord of Granum Broadcasting
Max Kinkel (Super Max)

Art emphasized that he doesn't have the money to purchase full page ads in the trades to campaign for MacGregor receiving this award. So this is all relying on the word of mouth in the industry and communications on the Net and fax.

Vuolo urged that, if are a member of the Museum of Broadcast Communications, be sure to vote for Byron Macgregor in the "Local/Regional Personality" category. Only ONE of the five candidates will be inducted to the Radio Hall of Fame, and "we want it to be in memory of BYRON MACGREGOR".

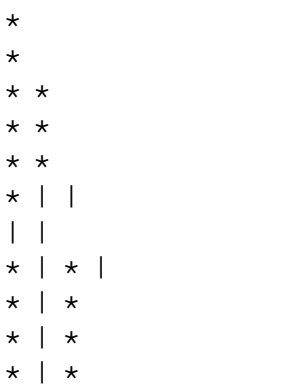
## 842. beamtilt

Newsgroup: rec.radio.broadcasting
Date: 1995-07-06 00:00:00 UTC
From: Holmes <aholmes@ultrix.ramapo.edu>
Message-ID: <3tfgnk$nvo@vixen.cso.uiuc.edu>
Source record: 30783

In an nutshell, beam tilt is how radio waves are angled out of
an antenna to allow high towers to radiate signals within their
coverage area. Without tilt the height of the tower radiates signals
so far that they do not cover the immediate area where they are
intended. I will try a diagram here...



without beam tilt with beam tilt

The radiation will be at a lesser angle when you use beam tilt.
Maybe Prof. Halliaken will give a better description but the picture
tells the story....

rec.radio.broadcasting
[1] Buying a station
rentadj@ix.netcom.com

The days of the highly inflated radio station sales (10+ times cash flow)

ended years ago when the banking laws changed to discourage banks from participating in these highly leveraged transacations (HLT's). Several groups were buying with the intention of selling within a few years (before any principal payments were due, they'd usually pay interest only) and making several million $'s.

When the banks stopped participating in these HLT's, there was no more financing available and in this game of musical chairs, the last owner ended up in deep you know what. The banks generally renegotiated to avoid taking a big loss.

There's more than you may have wanted to know, but now... recently 6x cash flow has been a more reasonable number, but obviously no one wants to pay more than they have to. Research what was paid for the station and when and try to develop a reasonable number from there. Ignore all calculations based upon value of equipment and stuff like that. It's useless in this business. Find out what they're billing and netting and

make sure you can pay the note. Once you buy, then look for places to do

any cost cutting.

Clear Channel has been extremely by finding either profitable stations in

small markets or more recently, high overhead, underperformers in big markets. Don't look at trying to take a station that may be on a hot streak.

Good luck,

Pat Ryan

Pat,

How much "reasonable growth" should be expected in emerging markets- such as ones Top 50 but Under 30 ?

## 845. Casey Kasem "This Is Ponderous"

Fred.Weinberg.KTRT/KBIX.Tulsa.918-341-6600;fred@ktrt.com writes:

>There's plenty of money in radio if you are willing to take a risk instead of a job

Could you elaborate on this a bit?

I've looked at this idea from a number of perspectives, and I keep finding myself face-to-face with three problems:

1. I haven't got any money, nor anything I can use for collateral.

2. In the radio business, he who has the gold, makes the rules. I have in mind particularly a friend of mine who got into radio in the early fifties, invested 40 years of his life in a certain radio station, eventually becoming president/general manager and a minority, but significant, stockholder. Then his partner, the majority owner, died. His heirs unceremoniously booted my friend out of the company, sacked him as president and general manager and refused to allow the station to be sold, depriving him even of the value of his stock. The man put the best part of a lifetime into this business yet has nothing to show for it.

3. The stations that are priced below a million dollars all seem to have something wrong with them: they don't cover the market, or the lease on their transmitter sites can't be renewed, or they're the twelfth FM in a market that can't support more than ten, or there's not enough advertising business in town to support even a barebones operation, or some combination of all of these. The more I look, the more it looks like you get what you pay for, and if you go for the cheap station, figuring that your disk-jockey or sales experience will more than compensate for a weak signal or too much competition, you're toast. I know three people who've learned this lesson the hard way.

So: what do you do? How _do_ you make it in radio?

Or, for that matter, American radio in the 1930s, at which time duopoly was
also permitted, and during which time the large network outlets simply rode
the line, relaying whatever programming was coming out of New York (or, on
the West Coast, Los Angeles) at a given moment.

Back to the 1990s:

| take-overs or simply stations going broke.
|
There certainly are structural problems in the business, and it's amazing
to see that every country has decided to make its own mistakes in this
regard. Still, I'm not sure anyone has proposed a better alternative.

>
Well, it's about the same as every modern rock station calling itself "the Edge" across the country... it's a modern rock format courtesy of Tom Calderone and their consultants at Jacobs Media, who apparently have some kind of trademark on "the Edge" now... The Edge is a modern rock format, not an alternative format, and I don't think it pretends to be "alternative" either.

It's the format-of-the-month, with "Edge" stations signing on all over the country... But what disturbs me is that it's almost becoming (as Mark Roberts affectionately talks about KISF in KC) modern *hit* radio... What began with AOR-ish rotations is evolving into something frighteningly like a CHR rotation with heavy currents getting about 40 spins a week most places, and 50-60 spins on stations like Kiss (KC), the Edge (Dallas, Minneapolis, and some others), WMMS (Cleveland), Q101 (Chicago). Where is the repetition going to stop?? I thought half the charm of alternative radio was that they didn't spin the same songs over and over again.

Give me a good progressive station any day... :)

--Ron

[Moderator's Note: The spins will stop when the money does. Chicago is home to a legendary progressive rocker, WXRT, which has lost big time to CHRocker Q-101. Everyone bitches about the playlkist, but the station is winning big time in the alternative wars. Bill]

## 849. Fake call letters and phoney *legal* ID's (was: Re: WPLM-FM Plymouth)

[...]

} Let's not forget that dynamite graveyard signal used to be 250 watts at
} night!

Which brings up a question.... Did the so-called *graveyard* (class IV) channels gain anything by all going to 1000 watts at night? Sure the power quadrupled, but so did the hash and garbage at night.

A class IV less than 8 air miles from me has trouble getting here at night. By day it is great, at night it is so full of hash that it is all bun unlistenable.... at LESS than 8 airmiles. Plenty of signal, but the skywave starts eating it away at under 5 miles and at 10 it is lost in the dust.....

Yep, the FCC sure is doing a great job....

Now, about those 50,000 watt regional channels.....

# 852. Harrisburg, PA Update 7/4/95

Newsgroup: rec.radio.broadcasting
Date: 1995-07-06 00:00:00 UTC
From: "M. Hale" <halem@access.digex.net>
Message-ID: <3tfgnu$o0k@vixen.cso.uiuc.edu>
Source record: 30793

The following is as a result of recent trip to Harrisburg, PA on Sunday, 7/2/95. Here goes....

1. As was reported here, the folks at Kool 94.9 (WWKL) have completed the purchase of Gemini's WYMJ-FM (formerly WIMX) and WCMB-AM. The stations had been under bankrupcy protection and the sale was probably a way for Gemini to get extra capital to get out of dept. WYMJ (Mix 99.3 FM) had been playing an Urban/R&B based format with Imus in the AM and Don and Mike in the PM. The AM was all talk with Imus, Liddy, Don and Mike and other assorted talk hosts. The combo (from all I can tell) was increasing its numbers and $$$ brought in and Mix 99.3 FM had increased significantly in the ratings recently. Many people I talked to listened to Mix 99.3 FM especially.
Well, as of Sunday, Kool 94.9's oldies format had been moved to 99.3 FM and both stations were IDing themselves as "WWKL Harrisburg. Harrisburg's oldies station." The jingles were saying "Cool 99.3." All indications have been that the Kool oldies format would go to 99.3 and something as yet undetermined would happen to 94.9. My speculation goes anywhere from the Urban/R&B that was on Mix 99.3 FM before the sale to Smooth (or traditional) Jazz, which is unrepresented in Harrisburg. What seems concrete is that oldies will be on 99.3 now. As for the AM, alt.fan.don-n-mike says that the current AM line-up will continue there as it has been. I couldn't tell since I was up there on a Sunday night. What I did notice was that WCMB AM was saying "All Sports Weekends" and was running the SportsFan Radio Network, something they haven't done in the past. We'll have to see what happens in the future with this combo.

2. WQXA-FM 105.7 has gone from some sort of AC to Alternative calling itself "105.7 The Edge." WQXA was once the Top 40 station in the Harrisburg market. I remember listening to them through Harrisburg in the mid-80's! Lately, WQXA has succomb to powerhouse WNNK (Wink 104), which got a 13.something in the latest book. They have had several formats over the past 5-7 years: Hot 105.7 continuous dance mixes, Q-106 an attempt at what they were in the mid 80's and several versions on AC. This new format should be good for central PA since it is not represented wholly anywhere (alternative is played on Wink 104, but not to the extent a true alternative station would play it). I hope it works out since there is definitely an audience for it since there are many college around the area and school age kids too.

3. I though this was really neat. Yesturday (7/3), WHP 580 (Talk/Full Service), the 5,000 watt flame thrower which has been discussed here recently, was doing its normal traffic reports, but inserted beach reports. I though this was neat since they were using actual traffic reporters from places like Philly, Jersey Shore and the MD/DE Beaches! Shows that

a commitment to keep the listeners informed pays off. People listen to this station, as the ratings show.

That's it for now. I'm headed back to Harrisburg later this week to see some people and I'll report back on the new format (if any) of 94.9 FM and what changes in staff may have been made as a result of these format changes at 105.7 and 94.9/99.3.

See ya-
Mike

> the FCC's current duopoly rules, because of the signals of WHJX and WJBT.
> So Jacor will own THREE FMs in the Jacksonville area.

Tom, what happens if the sale goes thru, and then Jacor applies for an upgrade at WJBT (now it's 6000 watts). After they make the purchase will they be allowed to upgrade 'JBT so that it's coverage area overlaps WHJX's?

Thanks!

>
>Harold
Harold:
Quite correct: "Sideband cancellation" is inaccurate inasmuch as the
upper and lower sidebands themselves cannot actually cancel - they are
different frequencies! However, once the sidebands are converted to audio
in the detector, any phase nonlinearity between the upper and lower sb's
will be reflected in the recovered signal, causing phase cancellation in the
audio domain.

>Island and, as usual, listening to Big Dan Ingram (one of the best
>DJs ever IMHO) on WABC.

>But things started to get weird. Dan was sayin' stuff like
>"Something's wrong here. All the cart machines are slowing down! I

(rest of story of big NorthEast power blackout deleted)

I'm gonna get a "bandwidth penalty", but this is just *too* good
a brand of stuff not to comment upon....

We had the baby brother of this when I was working in Cleveland about 1962.
I was working 2 jobs (6am-2pm at WEOL in Elyria, Ohio, near Cleveland,
and 3-midnight at WGAR in Cleveland) trying to make money to go
back to school. I was at the WEOL transmitter when the lights went
out at about 630 am. They came back on, but no audio from the studio.
I called on the phone, and found out that the lights were off there
also, about 15 miles away. The studio guys didn't know the transmitter
was on, so they grabbed a battery remote amplifier and hooked it up to
the program line and *voila*...we had microphone audio on the air.
THere was no way to play any music, there were no TTYs working, no
network, no news and what could you talk about for hours and hours?
Gotta play some music....wellll...the only thing we had were two
ancient Magnicord PT-6's and some old fill music tapes with some
announcer on them that sounded 80 years old and they *didn't* want
his announcing on the air, so I had to listen to each cut on the tape,
figure out what it was, cue past the old announcer, and then tell
the DJ downtown what the next song was, then he'd introduce it, and
I'd *patch* the PT-6 into the transmitter and start it. Then reverse
the process at the end of the song. The rub was..there was at least
30 db difference in the level from the PT-6 and the line from downtown.
So, I had to rush about 20 feet over to the limiter amplifier in
the rack, turn down the gain 30db, rush back , make the patch, start
the tape, listen to the other PT-6 to figure out the next song, cue
it up, then, when the song ended on the air, patch in the studio,

rush over to the rack, turn up the gain... and repeat the process over and over. I was a *wet noodle* by the time my relief came in at 2pm, but we were just about the *only* thing on the air in the whole Cleveland market. I somehow managed to get the tuner going and listened to the AM band. WGAR (my other job) was on the air for a few minutes after the lights went out, then they were *gone! 50 kw in Cleveland and no speak..no play music..no nuttin! I kept trying to listen, between rushing around back and forth to the rack, but they didn't come back... I knew we had a generator both at the xmtr site and the studio, so I wondered what was going on..

One funny aside...our Chief Engineer had AC in the remote truck, but it was a huge generator and bolted in the truck. He decided to run AC from the truck up through the window on the 3rd floor of the Elyria Savings and Trust building to the studio control room. He couldn't find any wire and everything was closed! SO, he finally found a TV store that was sorta open and bought a couple hundred feet of 300 ohm..you guessed it..TWIN LEAD..! It lasted about 5 minutes! Reports are that there was this brown goo all over the sidewalk! I'm *not* making this up!

Anyhow, I got out of WEOL and made my daily dash to WGAR, wondering what on earth was wrong. I got there to find every engineer on the staff climbing over, tearing apart and generally molesting the 5KW standby transmitter. Seems the generator was too small for the 50KW, so they had put on the 5KW, and about 30 minutes later...kapoot!!

Strange thing was that none of the old guys ever fooled with the 5KW normally. The chief thought it was a great learning tool for us "kids", so he had another guy, Al, and I doing the maintainance and general tweeking of the 5KW. Welll...when it went off, neither AL or I were there. Al arrived before I did, but the old guys wouldn't let him *near* the 5KW... The station was owned by People's Broadcasting in those days, a subsidiary or Nationwide Insurance. The chairman of Nationwide was Mr. Carl George. Guess who was planted in the operator's chair and smoking a zillion cigars? Right... Anyhow, AL says to me... "It's the stupid filament reostat..but they won't let me near it!". "Oh YEahh..I muttered..." About then, AL just said "screw it"..and went over to the front of the 5KW and grabbed the reostat knob...JIGGLE JIGGLE...ka-chunk....music..radio..RF..stuff! Boy were the OF's embarrassed! Mr. George threw down his cigar, looked at AL, glared at all of the OF's..and departed!

End of Story...knee-slapping allowed..

-Jim D.

You should also read Rhythm and the Blues, by Jerry Wexler. Every
page is filled with his version of the "rock" era, he lays claim to pro-
ducing a great quantity of the big acts from the 50's through the 70's.
It, too, is filled with untold-before-now stories, e.g., Sam and Dave
absolutely despised each other, how he lured Aretha to Atlantic, etc.
It's a good read ... both of the history of Atlantic, and confirmation
that operating a record company is rough, sometimes just plain sleazy,
business.

Reply-To: henrydc@aol.com (Henry DC)

Hey everyone! My name is Henry Herman, and I've been a broadcasting
student at WARW 94.7 FM in Rockville, Maryland for the past 2 months.
My grandmother on my father's side (Florence Herman) started
the first children's radio show in 1934 (?) on KLS in Denver,
and my cousin, Daniel Rivkin, is buerochief of Reuters News in
Brussels (last I heard), so broadcasting is definately in my bloodline.
This is just a simple request going out to all stations that read this to
please send me a bumper sticker from your station.
First, it'd be great to get mail from stations across the country! Second,
it would be something I'd have with me all my life.. one of those things
to look back and smile upon when I was just a broadcasting student, not a
broadcaster. Third, I'm curious to see how many bumper stickers I actually
get! (So far, only two. WLS in Chicago, and MIX 107.3 in D.C.)

Please send them to:
Henry Herman
3003 Van Ness St. #204-S
Washington, D.C. 20008

and thank you in advance!

## 866. Career question

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: fwaadv@aol.com
Message-ID: <3tl643$q9o@vixen.cso.uiuc.edu>

Reply-To: fwaadv@aol.com (FWA ADV)

Hi guys... question for one and all:

After doing a talk/call-in show at a local college station for a while, my partner and I (I'm a political consultant, he's a veteran journalist) are interested in stretching ourselves a bit and trying for a small gig (graveyard shift, weekends, whatever) at a commercial station. We live in a major market (So. Calif.) and figure that while we won't land a gig at KFI, we might find something at one of the smaller stations between Bakersfield and San Diego -- even if we're only filling in on an on-call basis.

OK, my question: What do you send in the package to program directors? I was thinking that resumes, a professional head-shot, maybe a sample of our very cool premium items (Don't YOU want a pair of WedgieRadio boxers?) and, of course, a tape.

But what's the tape got on it? I have a hard time believing that a harried program director is going to listen to a couple hours of programming, so what do you send -- a 30-minute segment? Highlights? I'd appreciate any advice and help you can provide.

Thanks!

Greg Brooks and Greg Lipford
WedgieRadio / Tuesdays and Thursdays at 6:30 p.m. on KUCI 88.9 FM, Irvine, CA

Regarding Q101 "winning" over WXRT in Chicago: While Q101 has a full share point lead in 12+, and is VERY strong 18-34, WXRT is still way ahead of them in the "Money Demo" of A25-54. Just what you would expect from the heritage station that has grown up with it's audience. Cashing out for $60+ million ain't exactly losing either...

## 868. R&R on-line? Where?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: Dan Johnson <Dan.Johnson@bev.net>
Message-ID: <3tl65f$qc2@vixen.cso.uiuc.edu>
Source record: 30659

Why isn't R&R on-line? Or are they? I'm thinking to myself, how much nicer it would be to get R&R at home or "on-time" without paying $300 a year in Fed Ex charges.

Anyone with an insiders knowledge of their coming around to the internet?

--Dan

P.S. It seems to me that they offered some kind of BBS but it was a far cry from being an on-line web page.

# 869. PREVENT CENSORSHIP ON THE NET

I had an article from the Radio Advertising Bureau several years ago that outlined the "proper media mix" of print to radio ads. It said something about the impact of a quarter page ad was as strong as a full page ad. The idea was to take the money that you would save in print and spend it on radio. I lost the article. Does anyone know how I can contact the RAB? Are they on the net? Is there someone (sales geek) at your station who might have the article? I am trying to convince someone not to buy a flight of full page ads and need this referance. thanks and feel free to reply to me direct.

# 871. Re: Any shared AM or FM freq - NYC

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: Paul_in_NJ <72212.441@compuserve.com>
Message-ID: <3tl65g$qc4@vixen.cso.uiuc.edu>
Source record: 30662

89.1 was deemed the "last" available frequency in NYC when the United Nations stopped using it. The frequency was assigned to two applicants:
WFDU Teaneck NJ Fairleigh Dickinson University
WNYU New York NY New York University.

WFDU essentially got overnights, midday, and weekends
WNYU gets late afternoon and prime time evenings.

WNYU is on M-F 1600-0100 (9 hours, 5 days). WFDU is on the rest of the time, but
there is a 15 minute grace period between one station's sign off and the other's sign on,
e.g. WFDU goes off at 15:45 (3:45 PM ELT), and signs back on at 0115.
Often in the summer the Schenectady classical station (WMHT) can be heard from Central NJ on the wide-open frequency between 1 and 1:15 am, antenna pointing North.

Despite 89.1 being the "last" available frequency, many stations have still found their
way on the air in the NYC area since then, ie. 88.9 WSIA Staten Island 89.3 WCNJ Hazlet
NJ, 88.9 WFRS Smithtown NY relaying WFME-94.7, WLJP-89.3 Monroe NJ, all causing some (non-protected) interference to WNYU and WFDU on all but the best tuners.

>My info shows at least one. 90.3 in Garden City, NY. WBAU broadcasts 5PM
>to 6AM with 1100 watts and is Alternative /Progressive format, While WHPC
>broadcasts 6AM to 5PM with 260 watts and is Full Service format. WBAU is
>owned by Adelphi University, and WHPC is owned by Nassau Community
>College.

Well, as the General Manager of WBAU I can confirm this!! This
arrangement has been in effect for some 22 years. Though the details
of the time share have changed once or twice, WBAU basically has the
days and WHPC has the nights.

For many years, we actually shared transmitter facilities, just
switching the audio feed back and forth. More recently, we have
individual facilities about a quarter to a half mile apart. While
WBAU has almost 4X the ERP the difference in antenna heights results
in very similar coverage.

>There's plenty of money in radio if you are willing to take a risk instead
of
>a job

At a lot of stations, taking a job IS taking a risk.

I've been following this thread with some amusement. Unlike others, I interpreted Fred's original post as saying he wasn't running stations for the benefit of employees. (others, including our outraged moderator, thought he meant listeners). This latest would seem to indicate I'm the one who's on the right track.

I don't have a quarrel with that. There are people in the talent side of this business who don't understand that their own interests do not necessarily coincide with the public interest.

I do wish there were fewer owners and managers who go out of their way to mistreat the hired help, often to the detriment of their own profits, just out of sheer contempt and contrariness. BTW, I'm not trying to say Fred's in this category.

NATIONAL RADIO CLUB
P.O. BOX 164
MANNSVILLE, NY 13661
315-387-3583

---

JULY 1995 EDITION

The National Radio Club's, DX Audio Service has entered it's tenth year of service by providing news of the AM and broadcast bands to radio listeners. The DX Audio Service is a member of the Association of North American Radio Clubs, (ANARC). The members of the National Radio Club are people who enjoy listening to AM Radio, and as a hobby, listen for distant stations not in their immediate area. The typical DX Audio Service member is a person that knows what is on radio, and the technical aspects of radio listening. Of all the clubs involved in radio listening, the National Radio Club boasts the largest number of people who are active AM band listening!

The following is the list of what was on the July 1995 DX Audio Service magazine. The program is made available on a C-90 cassette.

- 00:00.00 Introduction and address information by Fred Vobbe
- 01:32.14 The DX-Change, and 50 Years ago in the N.R.C.
- 02:40.39 Jerry Starr's AM Switch
- 11:12.68 John Bowker's Travellog - 1280 kHz (Part 1)
- 25:19.13 Jim Snowbarger's Bandscan - From Minneapolis MN with Skip Dabelstein (540 to 1000 kHz).
- 35:19.35 Bruce Conti's IDXD - Newfoundland DX Test Results
- 45:15.09 Close of Side one.
-
- 00:00.00 Open of Side two by Phil Wayne
- 00:04:18 Phil Wayne's Marketscope - AM Radio in Las Vegas
- Nevada during 1995 NAB Convention. Presented by
- Fred Vobbe. Part 1
- 13:19.73 John Bowker's Historical Moments in Radio
- 18:17.71 Musings from the Members
- 23:03.44 Sports Networks by Ken Onyschuk
- 40:14:21 Fred Vobbe w/ News and Information. Topics include, Gail Gorden and Wolfman Jack obits, responce by Tim Hendle to John Vodnik's comments on After Dark 5, Explaination of Legal ID of WTVN and duplication of IDs on AM & FM services, what is a member of the National Radio Club, new member and gift subscriptions, information on aircheck traders column, and NRC

voice mail system.
- 45:02.10 Close of the DX Audio Service

For further information contact Fred Vobbe, editor of the DX Audio Service, at the following addresses;

IN AIRWAVES 1427, croth@omnifest.uwm.edu (Chris Roth) asked:

| In previous editions of Head and Sterling's Broadcasting in America,
| there's mention of a practice called "frequency sharing."
[]
| Is this still done anywhere in the USA?

I have posted about this extensively; to summarize, KKSU(AM) in Manhattan, Kansas and WIBW(AM) in Topeka, Kansas share a regional-coverage 5 kW signal at 580 kHz. WIBW goes off the air at 12.30 pm on weekdays, giving way for five hours of programing from KKSU until 5.30 pm, when KKSU leaves the air and WIBW comes back.

The stations operate from separate transmitter sites.

More details on
<URL: http://www.interstate.net/~transvox/kksuhist.html>.

A couple of NCE-FM channels are shared, in Cincinnati, and Austin (Texas). The only *commercial* sharing of an FM channel of which I am aware occurred back in the 1970s in Knoxville, Iowa, where stations KTAV and KRLS shared 92.1 mHz until at least 1981.

>JoeWo@aol.com

The Ontario station you refer to is CHYR, Leamington (30 miles SE of Detroit/Windsor). I believe the switch is made to avoid 710 WOR, clear-channel, 50,000 watts out of New York. The station was Canadian Top 40/AOR and Toronto Blue Jays games about 8 years ago when I was living in Detroit. Last I had heard, CHYR was country or religious and CKLW, Windsor was carrying the Blue Jays as part of their pro-Canada, not just another Detroit station format, but I digress. Does anyone have any current format info. on CHYR or the other CAN-AM stations out of the Windsor area? Thanks.

Jason Hardiman

Yes, they do. So do car radios. GM has had expanded band coverage on Delco radios since at least 1992 (the vintage of my current vehicle). Too bad there's nothing there to hear.

This is another case of how the FCC's endless procedural foot-dragging, and refusal to take a position and stick to it, harm the industry. They said they were going to use the expanded band to reduce interference on the rest of the band. Now why don't they "just do it?" This has nothing to do with debates over free-market economics. Or is it that like the AM stereo debacle, they're just afraid of being sued? (and for what???)

: side of town (and even in town) is spotty to poor.

Here in Northern California, KRSH recently came on the air, licensed to the Lake County town of Middletown. Middletown is literally in the middle of nowhere, and because of the surrounding mountain ranges has little or no local service.

The first thing management did was locate the transmitter on a moutaintop that sort of served Middletown, and put a marginal signal into the much larger Santa Rosa market. Then they built the station's studios in downtown Santa Rosa.

The only time the city of license is mentioned on the air is during the hourly weather forecast, buried inside the :55 spot cluster.

"... right now it's sunny and 80 degrees here at the Railroad Square studios of KRSH. Middletown reports 76 degrees, and it's 85 in Rohnert Park..."

# 885. ADMINISTRIVIA: Posting Guidelines for this forum

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: EDITOR@airwaves.com
Message-ID: <3tll2l$k60@vixen.cso.uiuc.edu>
Source record: 30676

It has become time for me to set out the basic guidelines for posting
to this newsgroup, and some basic explanations of what the group is
for, and about.

Newsgroup rec.radio.broadcasting (rrb), and email digest
AIRWAVES RADIO JOURNAL (ARJ) are designed to provide a public forum
for the dissemination of information and conversation pertaining to
radio broadcasting. By professional-level, we mean discussions of
matters of interest to radio broadcast professionals and those with a strong
and serious interest in radio broadcasting. We do not limit
participation to broadcast professionals.

In order to keep the forum from erupting into flame-wars and to keep
it on topic, rrb and ARJ are *moderated* forums. This means that all
posts must be approved prior to publishing. This document is designed to
give readers a feel for what is acceptable to publish here but is not
designed to be an all-inclusive charter.

In order to be accepted for inclusion in rrb/ARJ, a post must have the
following minimal attributes.....

1) All posts must have a valid name attached to them in some way.
This means one of the following...
a) A *real name* (your actual name) This is preferred.
b) Your *on-air name* (you must include the station/network at
which you use that name)
If your Internet host doesn't include a real-name as part of the"
From: line, then you should add it to the end of your post.
If you are posting sensitive information, and don't want your
name used, let me know and I'll try to cover for you.

2) All posts must have a valid 'SUBJECT' line.
This means that the subject line must accurately reflect the
content of the post. As a thread drifts from the original
focus, the subject line should be changed to reflect that shift.
Posts without a Subject: line or ones which use a bogus
subject may not be posted.

3) All posts must pertain to the charter of the group, *RADIO* broadcasting.
Occasionally a post about TV will be OK'd if it appears to
have a broad interest to radio people. However, this is considered an
exception and is not encouraged.

4) All posts must have a valid return address. Posters whose email
bounces may be excluded from the group to help curb possible
forgeries.

5) All posts must be submitted as "ascii-text".
Binaries, MIME and other attachments are not postable to netnews.

6) All posts must be formatted to an absolute maximum of 78 columns.
The standard for a text-terminal is 80 columns. We specify 78
to allow for quoting in followups. Failure to do this will result in
"line damage" which is the uneven wrapping of lines that are too long.

7) Quoting of previous article text should be kept to a minimum and
*never* exceed 49% of the entire article. Never quote the signature
files from previous posts. Only use the bare minimum needed to make
your points. If replying via the Digest, "please" never quote the
entire (or substantial portion of) the digest.

8) Please distinguish between the 'followup' and 'reply' functions of
your newsreader. Followup sends your response to the group, reply
sends it to the poster via email. When replying to a personal request
for information which is of limited or no real interest to the entire
group, please email to the poster. There is no purpose served by
posting replies to very personal requests to the entire globe.
However, if the requested information is of potential general
interest, then please do post.

9) When posting Help Wanted or Positions Wanted, please include a Full
*REAL* name, Company name, postal address, FAX and/or voice phone and
(if applicable) email address.

10) When asking for, or offering, information about a local station or
personality, always give a little background. Remember most people
are not familiar with your market. If you use a station's slogan,
always include the calls and city too.

11) Commercial postings are a delicate issue. Some would like to see
none of it, others seem to take the tack that mild commercial posts
are OK provided they are not too 'in your face' and are part of the
flow of conversation. The moderator makes all final judgements on
acceptability of commercially-motivated posts. If you are in any way
connected with the company you are posting about, you *must* disclose
that affiliation even if you are not an official spokesperson.
Avoid blatant commercials. Make your points in conversation. Never
overtly bash a competitor's product. Be nice, it will be to your
ultimate benefit.

12) Remember that you, the poster, bear all responsibility (if any)
for copyright, libel, trademark and other matters when posting to the
Internet (not just to this group). Please try your best to be
accurate in your posts. If you post your opinion, make sure it is
cabled as such. Please try to obtain permission when reprinting from
copyrighted sources. Always give attribution of your sources when
available. Summarize when possible to avoid potential copyright
issues. So far copyrights have not become a problem on the Internet,
but as the net grows, it may become more of an issue.

13) Flames are not permitted on this forum. A flame is defined as "personal insult or ridicule". It is perfect;y fine to argue the points or opinions raised by a poster, but not to personally insult the poster. In other words it is acceptible to say... "Your stated opinion is stupid..." NOT "You are stupid for having that opinion..." It is fine to articluate and argue points of view, but make sure you counter it with another point-of-view and not just hit people over the head. Calling of names is also considered a flame. We have conversations here, not shouting matches.

Also avoid posting...

* Known false or misleading information.
* Items that you know are a violation of copyright.
* Overtly profane posts (profanity is not forbidden, just use discretion).
* Loooong signature files. 4 to 6 lines is a good soft-limit.

Thanks for reading. Hopefully this will clear up some of the misunderstandings about posting to rec.radio.broadcasting. For a more inclusive charter of this group, send email to rrb-charter@airwaves.com .

>Fake calls and over 25 miles from Springfield. Signal on the other
>side of town (and even in town) is spotty to poor.

We used to do similar at 95.9 WAX-FM, in the Youngstown market. The announcer came on and mumbled "WAXF Sharpsville/Youngstown". Sharpsville, PA was the actual city of license, on the Ohio/PA border. But we didn't give a pseudo-legal like that one. Incidentally, I believe WHTO in the Williamsport, PA market does the same thing - last I'd heard, they refer to themselves exclusively as WHOT. (Those legal call letters belong to, to come full circle, WHOT(FM) - Hot FM 101 in Youngstown, OH.)

>Why,,, oh why do stations invent call letters like that? Would they

>listing for them, even though the are a duopoly with classic rocker
>KZBE (B-95). Great CHR station, talented PD and great air talent,
>but a stooooooopid positioning scheme.

They get credit, assuming they've registered "KHOT" with Arbitron. And like some radio stations, they're probably listed in the phone book as "Hot 106.7". Kinda makes you scratch your head, but there are a couple of local stations that are listed only by their on-air identifiers...so if you go coming through the phone book under "K", you won't find them. There should be at least a cross reference there.

Well, everyone wants to identify with the big (or biggest) city. When I consulted Q-94 (WBXQ) in the lovely little town of Cresson PA, we focused on Johnstown and Altoona. The local Alternative station, WNVE 95.1, licensed to South Bristol NY, makes a big deal out of trying to be a Rochester radio station. It's the same all over the country.

Yes, KHTO would get Arbitron credit for KHOT, either as a "call letter flip", or if they listed it in their slogan file with Arbitron. Probably they think people are more likely to remember KHOT than KHTO...and, sad to say, they're probably right.

> lost in the dust.....

Bill, I had a similar experience with the AM partner of an FM station I consulted in the early Eighties. The AM station, WAMQ-1400, was licensed to Loretto PA and trying to serve Ebensburg (the nearest sizable city) at night, which they did reasonably well with 250 watts. But when all the Class IV stations increased their nighttime power to 1000 watts, the "cocktail party" on the frequency got so loud at night that WAMQ couldn't make it the 6 or 7 miles to Ebensburg clearly. The owner (who still has the FM station, WBXQ 94.3 in Cresson) bemoaned the power increase ever after, and eventually sold the AM station, which ultimately went dark.

Progress... <sigh>

Today
's Milwaukee Joiurnal-Sentinel reported the death of George Veukelich, AKA "Papa Hambone" in Madison, WI. Born and raised in the Miwlaukee area, "Hambone" was best remembered as evening man on WIBA-AM, where he was noted for reading his own poetry accompanied by "live" jazz.

In his later years, he produced "North Country Notebook" for Wis Public Radio.

A great interviewer, a wonderful writer, a great guy. He was 68.

>
> We also have a VALLEY and a SYMETRIX 528 free in the building.

Scott,

I'm not familiar with your Air Corp processor, but if it has user-adjustable attack and release settings you can get a good start on the sound you want using these. Setting the release time very low (like minimum) will help give you that full, sucked up sound. Setting the attack time high will give it some punch, or bite. Compression ratio doesn't necessarily have to be set that high on the processor, as your on-air processing helps take care of that, but to a point the higher the ratio the ballsier the sound will be. Too much and you'll lose it. Don't overdo the EQ. Too much bass boost will just make it muddy. Less is best to begin with.

I use Symetrix processors in the Production studio, but you know I look at those things every day and I can't tell you the model number on them. I can tell you they have a tri-band parametric EQ on them. It took me a year of tinkering before I finally settled on the sound I wanted, and I was only able to get it after taking the cover off the box and setting up the attack and release which are inside. I think they sound great now though, and I'd say at least half the artists I've brought into the studio to record ID's for the station have actually commented on how much they like the mic sound in their headphones. If you can't get what you want out of your Air Corp, e-mail me and I'll try to describe my settings for you. Of course your mic, on-air processing and personal taste will all affect the way you set your mic processing, and what works for me could suck for you.

In a previous article, jlsnow@fcseng.frco.com (SNOWMAN) says:
>
>Hey all,
>
>What kind of success are the all-sports formats having in your area?
>How about sports-talk blocks on general talk stations?
>
>Jim Snowbarger
>Marshalltown, Iowa

In the LA area, all-sports has been a bit of a disaster. KMPCbit the
dirt as a all-sports station 14 months ago, and San Diego's XTRA has not
made much in-roads, even though they not only have a storong signal from
Baja, but also simulcast from the San Fernando Valley.
A small Pasadena FM, KMAX/107.1 has just started up, broadcasting
McDonnel/Douglas(ex-'MPCX) in the afternoons and The Fabulous Sports Babe
in the middays. Verdict on 'MAX istoo early to come in.

The station that tried sports-talk here in Bakersfield (KGEO-AM) has completely abandoned it. The station had about a 2.5 in the Arbitrons with satellite-delivered oldies, and sports-talk ran it down to a no-show before they pulled the plug. It's now doing "hot talk" (Imus, Susan Loggins, Ken Hamblin, a Rush repeat from duopoly partner KERN-AM, Ollie North) and starting to show in the Arb's again. KGEO pulled the plug on their last local programming when they replaced a sports-oriented morning show with Imus a couple of months ago. The only sports-talk left on local airwaves is on a big band/nostalgia station in PM drive, with ratings measured in decimal points.

IMHO, sports-talk works only in very large markets, with local big-league franchises and major colleges to talk about, and enough of a population base that you don't have to worry about its very narrow demographics. In markets this size, (#88), sports is strictly something to watch on TV or read about in the paper. (And the TV folks say that when the sports segment starts in a newscast, about 60% of women and 40% of men tune out immediately.)

IS>What kind of success are the all-sports formats having in your area?
IS>How about sports-talk blocks on general talk stations?

Jim,
The granddaddy of them all (WFAN, New York) is doing very, very well. The numbers aren't very good, but it's one of the most profitable stations in the country. Their strongest show isn't a sports show, either. It's Don Imus. The general consensus is that it wouldn't be worth much without him.

Looking around the country it appears that the most successful sports stations are the ones who've locked up the important local sports franchises. It's rare to see a "Sports Talk" station succeed without those franchises.

WFAN has both Imus (a legend in NYC) and the important play-by-play - a very profitable combination.

Rich

[Moderator's Note: Same with WMVP in Chicago. Without Steve Dahl's morning show, that station wouldnt even crack a 1 share. WSCR *owns* Chicago sports talk despite a flimsey 5kw daytime-only signal. Plans are to build an array for nights but I dont know how they are coming along. Bill]

Here in Cincinnati, all-sports does not do well. WSAI
gave it a shot when they were on 1360 AM, and now WUBE-AM
1230 is trying the format, with, as I understand it,
little success. The reason it doesn't do well here has
to be that the Jacor stations broadcast the games of all
of the teams of local interest (Reds, Bengals, U.C.
basketball and football, and Xavier basketball). WLW
does very well with its local sports talk shows (Cris
Collinsworth, Andy Furman, etc.). I guess people would
rather call and talk about the local sports teams than
call a nationally syndicated show.

Check out our ever-expanding web page - http://radio.aiss.uiuc.edu/`rrb/

The AIRWAVES Radio Journal (Formerly published as the Internet Radio Journal) is a periodic email digest dedicated to discussions of broadcast radio, from a professional and quazi-professional perspective. Subscriptions to Airwaves are free, and available via electronic mail (email). Subscription information follows later in this document.

In addition, all articles in AIRWAVES are ported to and from the Usenet newsgroup rec.radio.broadcasting (r.r.b) which was founded in April of 1992, as a means to further discussion of topics pertaining to 'domestic broadcast radio'.

By domestic, we mean broadcasts which are intended, primarily,for reception in the same country/nation in which they originate. AIRWAVES and rrb, are international in scope, and the term 'domestic' should not be taken to imply 'USA' or even North American. Readers in other nations are encouraged to participate.

```

```

Appropriate topics include (but are not limited to)..

) Formats and programming.
) Engineering & technical matters and interests.

) Community broadcasting.
) Pirate broadcasting (especially non-shortwave, domestic pirates).
) Legislation affecting the industry, and its 'offspring' industries.
) Technologies affecting the industry, and its 'offspring' industries.
) General station information. Who is going on and off the air, and why.
) Radio's historical and cultural significance.
) DXing (long distance reception) on the standard broadcast bands.
) Radio's current and future trends.
) Political and news coverage and its impact.
) Job openings and help to those seeking work in the industry.
) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
) The International Scene and how broadcast radio is shaping up in the various nations of the world.

**********

One of the main goals of AIRWAVES/rec.radio.broadcasting is to act as a bridge between the radio broadcast professional, the listener, and those who are up-and-coming broadcast Professionals. Groups who often lack any real insight into each other's "world".

1) The radio professional. S)he lives *inside* the walls of radio. While dependent upon the listener (or more accurately the overall number of listeners) the Broadcast Professional (BP) is somewhat separated from the end user by virtue of his/her "point-to-multipoint" position. AIRWAVES offers the BP a glimpse into the real-world of the listener, un-filtered by consultants, ratings, trend-reports, trade pubs et-al. Sometimes that world is a little rougher than the broadcaster is used to, but that is the reality of 'the real world' sometimes. We do try to maintain a civilized environment, though, and filter out the most offensive brainless or off-topic posts (more on this below).

2) The radio listener. The listener is also in a similar (albeit inverse) position. The listener has relatively little actual input into radio programming. They often have only a vague idea of what makes a radio station tick. By communicating directly with broadcast professionals (and para-professionals) the listener gains some insight and understanding into the world of the broadcast professional.

3) The 'wannabe' broadcaster. AIRWAVES/r.r.b gives those with a strong interest (but little or no experience) in the industry the chance to interact with, those who have made it in the business. We also post resumes and 'help/positions wanted' ads for interested parties.

AIRWAVES/r.r.b is loosely moderated, as alluded to above.

Our philosophy of moderation is to 'err on the side of permissiveness'. We do not believe in censorship and never kill a post because We don't believe in the poster's opinions. We take great pains not to unduly

restrict dialogue or the poster's right to express him/herself, while
at the same time attempting to provide a professional-level
environment free of unnecessary noise (a daunting task).

```

|___/
```

Matters that may cause an article to be rejected, include...

* Articles which are not on (or reasonably near) the group's charter.

* Articles that are too long for submission as-is. We have a soft
limit of 8000 bytes (*kbytes) and a fairly hard llimit of 10,000 bytes
(10kbytes per article for the Digest. We will post longer files in
the newsgroup, but all sites may not carry longer items.

* Articles which are merely multiple repetitions of an identical answer which
has already been offered several times.

* Articles which contain 'miles' of quoted and multiple quoted text followed
by a few lines or less of original text. Please edit quoted text to a
minimum and try to adhere to the *50% rule*, that is 51 (or more)
percent of original text to 49 (or less) of quoted text.

* Articles that solicit for funds or contain blatant commercial content.

* Articles which are unwarrantedly offensive, abusive or contentious for the
sake of contention. Personal attacks and ridicule are considered such.
Discussion, even argument, of issues and opinions are welcomed and
encouraged. However personal attacks on individuals (no matter how
justified you might feel they are) are not part of our charter.

* * * * * * *

```

Archives of past Airwaves Radio Journals are kept for retrieval via FTP, Gopher or via the Worlkd Wide Web. Below are the paths for these archives.

FTP - radio.aiss.uiuc.edu /misc/rec.radio.b-cast/
Gopher - radio.aiss.uiuc.edu 7070
W.W.W - http://radio.aiss.uiuc.edu/~rrb/

AIRWAVES JOURNALS (and the previous incarnation as Internet Radio Journals) are stored in sub directories, each with their own index file. Our archive site also contains files from a couple of our other lists, as well as some interesting information not published in AIRWAVES/r.r.b. Most files are compressed, so if you are using FTP, use the binary mode to transfer.

Our Web Site has many other radio/media and general links in addition to the archives for AIRWAVES publications. Do check it out. Let us know if you have any other interesting links for us.

We hope you enjoy the group. Remember, it is only as good as it's contributors. So don't be shy :-). If you have a question, or answer, even if you are not sure, post - post - post.

We are open to suggestions on how to improve this group.
Send them via e-mail to wdp@airwaves.com

Thanks to all who have, and continue to, participate.
We now return you to your regularly scheduled newsgroup :-).

If you are really interested in broadcast radio in your own area, you might wish to get involved in the AIRWAVES "RadioWatcher" project.

We are currently asking for individuals who are either active in the industry, or are very much involved in the happenings around their town/city/community and would like to become recognized as a "RadioWatcher" for AIRWAVES.

As a RadioWatcher, you will be responsible for reporting the goings-on in your locale, and will be, in effect, a staff reporter for AIRWAVES. While anyone can write an article for the Journal, RadioWatchers will be considered the de-facto correspondent in a given city.

As a RadioWatcher, you will be asked to keep an eye and ear out for news and schmooze about the broadcasting scene in your market. You are asked to submit at least one report per month (more if you choose) and will be kept on file here at AIRWAVES as an official member of the press (for whatever good that might be).

The purpose of this program is to create a base of volunteer staff reporters who's job it will be to keep a steady flow of good information about various markets coming in to AIRWAVES. It does not mean that the pages of AIRWAVES are closed to any of the other posters in net-land. It is just a way to assure that the readers will have something good to read, when the more casual posters are not available.

Q: What do I need to do?

A: RadioWatchers are basically the same thing as reporters. To remain on the RadioWatcher program, you are expected to be involved with

radio in your market, either by profession, or by a strong personal interest. You will be asked to report on any interesting goings-on in and around your market. Such as format changes, station sales, interesting trends, market ratings, and whatever else seems appropriate. The depths to which you dig for information is up to you.

It is important, though, that you are a true fan of radio, and not merely a fan of one sort of format. Your reports can have personal commentary, but should be based on actual facts (as you know them) rather than how those facts match up with your personal opinions.

In general, we need good, solid reporters who will do the job based upon their love of radio, and desire for more exposure. AIRWAVES is not a profit making entity, and so salaries cannot be offered. If you are a budding journalism student, or a seasoned pro, this may be a chance for you to show your stuff to the world. Airwaves is read across the globe via the Internet, and is available to subscribers of CompuServe, GEnie, AOL and on a host of BBS systems, via email. Your input will not go unnoticed.

At least one of our more prolific reporters tells me that he receives much email in praise of his posts and has made many interesting contacts as a RadioWatcher. We have also been told that our RadioWatchers have broken stories long before the trades get a hold of them. Not bad for a bunch of voluneers, huh?

So if you are interested, drop me a line and tell me about yourself. I will be in touch by return mail. Those of you who expressed an interest in the past, are encouraged to get back in touch. Those of you who are already RadioWatchers, thank you and keep up the great work. As AIRWAVES expands, your contribution will be even more important.

# 898. AIRWAVES MEDIA WEB SERVER SEEKS NEW LINKS

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: wdp@airwaves.com
Message-ID: <3tli8q$hhr@vixen.cso.uiuc.edu>
Source record: 30711
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave,rec.radio.noncomm,alt.radio.networks.npr,alt.radio.talk,chi.media,ba.broadcast,uiuc.general,rec.arts.tv

Hello all:

I have once again started updating the glorious AIRWAVES web page (http://radio.aiss..uiuc.edu/~rrb/ ) and am again seeking any and all radio/television/media related links to add.

Specifically I am looking in the following areas, but if you have something you are not sure of, please send it.. Note that I am seeking links to http/FTP/gopher sites and am *not* offering to store large files locally on this machine. Smaller files of interest may be housed here if nothing else is available, but disk space is not unlimited.

1) Anything related to radio broadcasting.
a) Station web sites
b) Archives/web sites of personalities/talent
c) Links/sites for programs, networks, even companies doing business related to radio broadcasting.
d) Playlists, program schedules, general information
e) Informative links, Broadcast law, news services, databases, archives of same..
f) Talent resources. Bits, alternative news sources, info about other lists, digests, and media resources on the net.
g) Technical resources, archives. Are you willing to answer technical questions? We'll post your email address.
h) Personal information, Resumes, 'get acquainted' ads, etc.
i) Links to other media/radio sites.

In other words.....Anything and everything that is radio related.

2) Television: Networks, Programs, News sources, Stations, Talent

3) E-Zines: Anything that is related to media even slightly. All points of view, levels of quality.

4) International: All links to International archives on media, especially (but not limited to) radio.

5) Directories: Fax numbers, email addresses <provided they are legitimate and OK to use> of entities involved in media.

**Please check our pages before sending to be sure we don't already have them.**

SEND ALL WEB INFO TO web@airwaves.com

Please fully explain what sort of resource you are sending in.

==========

-=*=- Coming Soon -=*=-

A 'marketplace' segment on the AIRWAVES web page, expressly for
commercial vendors to communicate with AIRWAVES readers about their

Come on. Contract or no contract, there's no station in America that can't get out of a contract to carry a syndicated show. It's called cancellation. If the syndicator pushes, they can usually get the station to carry the spot load for the duration of the notice period, usually 2 to 4 weeks.

I doubt seriously that that was the reason. Been there.

Can't take much time... but, I ran one of those Metro shops for a few years and the only way to prevent stations stealing your info is to sign them up.

You might make a case out of recording their air after you've recorded your reports-- that way you could prove they had information that was exclusive to your station's.

Out-side-a dat'... there's not a lot you can do.

## 901. Computerized Digital Voice

Source record: 30715

Reply-To: jon@mix96.demon.co.uk

Hi,

Does a program exist that will convert MPEG files to WAV files and vice versa ??

I'm writing from a radio station in the UK where we use the US made DAD486x automation system. This software uses Antex DSP boards to create audio files in MPEG layer 2, sampled at 32 Khz and at 96 Kbit rate (stereo). I would like to be able to convert these files to wav files so that I can edit them on a standard Windows Based editor and then save them back as the original file type.

Any help much appreciated.

Either post here or E-Mail (preferably) to jon@mix96.demon.co.uk

Thanks.

# 903. WBLI, Long Island, NY GREAT STATION

Newsgroup: rec.radio.broadcasting

Hi all:

This is my first post here so bare with me. During the week of the US Open at Shinnecock Hills, I was staying at the Smithtown Sheraton. I know nothing about NYC/Long Island. I was flown in as a daily hire for NBC. Anyway's, while staying at the Sheraton, I stumbled across this great station at 106.1 FM, WBLI. I can't remember the city of license and have not taken the time to find a copy of the broadcasting yearbook.

Can anyone tell me how this stations fares in the ratings there? There Sunday morning 70's show was unbelievable. Thier currents were just right and the gold was fantastic.

I reside in Harrisburg, carry a bad case of sour grapes for the radio industry and can't stand a single station in our market....There may be hope on the horizon though if Quaker executes a decent format at 94.9, formerly WWKL, Harrisburg Kool 94.9. I won't hold my breath I saw what they did with Kiss 95 WHKS back in 1989. Crashed and burned..... I had been doing a part time gig at WRKZ, Hershey as that I used to truly like the stations programming and philosophies... that changed late last year with the addition of a new "I KNOW WHAT WORKS & WHAT DOESN"T WORK" PD. Needless to say, at $5.00 an hour and being only part time out of the love for the buisness, I said GOODBYE...My full time job is a transmission engineer for the PBS/NPR Affiliates in Harrisburg. Also, a buddy of mine who became the C.E. at The Fox Affiliate in York, offered me a decent wage for part time work engineering thier new 10PM News.

I do find I miss the airwork, but you got to enjoy what you are doing and be compensated accordingly.

I've been in radio for over 21 years; I spent a considerable amount of time growing up in LA listening to XERB and Wolfman, plus trying to talk to him (I never got through on the phone, but years later I met him and we even discussed my working for his organization). I'd like to think his generosity, warmth, genuine talent, and outrageous sense of fun are why I got in the business to begin with. It's not totally like "we'll miss you, Wolf" cuz you'll never leave us. Thanks for the good times.

Wolfman Jack is one of five nominees to the 1995 Radio Hall of Fame in the Pioneer category. Other nominees in the category are the late Eddie Cantor, William Conrad, Bing Crosby and Stan Freberg. Ballots will be tabulated by Checkers, Simon and Rosner LLP of Chicago. Balloting ends on August 1st.

"The Radio Hall of Fame is saddend by the death of Wolfman Jack," said The Museum of Broadcast Communications Founder and President Bruce DuMont. "As one of radio's legendary pioneers, the Wolfman is one of our nominees for induction this year. We join with his millions of fans from coast to coast in offering condolences to his family. Like so many who have passed before, the Wolfman's voice will live on in all of our memories."

In regard Wofman Jack.. about five years ago I ws doing a lunchtime Oldies show. Wolfman Jack was my guest. I was in Nashville, he was in Belvidere. We had no equipment and no way to feed audio down the phone line to Bob. I told the name of the song, he he danced up the vocal, pausing at the posts and hit 98% of em!... and he couldn't even hear 'em. How many of today's "card readers" could do that!!!

Hi

Never met Bob *Wolfman* Smith. Never saw his off-air personality.
Only knoew him as the Schtick Man on the air. I just wanted to say
that I have been deeply moved by the enormous outpouring of sincere,
loving, admiriing, emotional and deeply touching statements and
testimonials from this group for Wolfman.

I wish I had known him. He sounds like the sort of fellow that radio
needs more of, instead of the ego-poisoned, overly self-important
types that seem to be too common in today's marketplace.

He sounds like he was so genuine, so non-egoic, so real and authentic
that it is even more painful to watch some of those now in the biz who
think that the ground they walk on is blessed, just because they spin
records on the radio.

God bless the Wolfman, and those who have been touched by his humanity,
warmth and love.

> Bill]

The 1540, now WPGR, does indeed plan a new transmitter site (there's a large "For Sale" sign on the current three-tower site along Ridge Pike in Roxborough) and the ethnic programming was scheduled to begin on July 1, displacing the "Geator Gold" format featuring Philly radio legend Jerry Blavat, who has since trucked his idea over to WSSJ-1310 in Camden.

Now, MY cynical comment: WPGR re-licensed to Bala Cynwyd a few years ago and got nighttime authorization with 500 watts. I worked at WEGX (now WJJZ), whose studios are right there in Bala Cynwyd, almost in view of the three WPGR towers, and let me tell you, 1540 at night didn't even cover the darn city of license very well!

UNITED STATES: Journalist Mumia Abu-Jamal to be executed after unfair trial

ORIGINATOR: Federacion Internacional de Periodistas (FIP), Caracas

Source: Equal Justice U.S.A., International Concerned Family and Friends of Mumia Abu-Jamal

Journalist Mumia Abu-Jamal is to be executed on 17 August 1995 in a North American jail for a crime that he says he did not commit. Abu-Jamal has already spent 13 years in prison. His trial proceedings were full of irregularities. The judge who sentenced him, Judge Albert Sabo, has condemned 31 people to death, and except for two, all have been Black, Latino, or Asian. No other judge in the United States has as many executions on his resume.

Mumia Abu-Jamal is a journalist with an extensive history in the fight for civil rights. When he was in high school, he was the editor of the Black Panther Party newspaper. He later worked in community radio, hosting his own programme on WUHY-FM in Philadelphia and at the age of 26 he was elected the head of the Philadelphia chapter of the Association of Black Journalists.

BACKGROUND: On the night of 9 December 1981, Abu-Jamal was driving a taxi when he saw a man being brutally beaten by the police. It turned out to be his brother and he stopped to intervene. In the ensuing altercation with the police, Abu-Jamal was shot in the stomach and a police officer was killed. The gun that fired the fatal shot was never recovered. Abu-Jamal was charged with the murder of the police officer after undergoing surgery at a local hospital. On 3 July 1982, he was convicted of the crime of murder.

At the hearing, the prosecutor emphasized Abu-Jamal's membership in the Black Panther Party, despite the fact that it was 10 years previous, in order to secure the death penalty. It is significant that in another case the Supreme Court reversed the death penalty

against a member of a white supremacist group, The Aryan Brotherhood, saying that the affiliation was used as grounds to obtain the death penalty. Nonetheless, the Supreme Court denied Abu-Jamal's petition for an appeal in October 1990, even though it was launched for the same reasons as the aforementioned case.

The are numerous questionable aspects of Abu-Jamal's legal proceedings:
- 11 potential Black jurors were excluded by the prosecution, as well as one white juror who admitted uncertainty as to whether or not he could impose the death penalty. In contrast, the defense was denied the right to challenge a juror who stated with certainty that he already knew the accused was guilty.
- Abu-Jamal was denied the right to choose his own lawyer, and then to represent himself. Throughout the trial, his court-appointed lawyer operated most of the time over the protest of his own client.
- The defense was not allowed to call a witness who said he had seen another man fleeing the scene of the crime, nor to expose contradictions in police testimony.
- In his instructions to the jury at the death penalty hearing, Judge Albert Sabo failed to state that Abu-Jamal had no previous criminal record.

Pennsylvania Governor Thomas Ridge signed Abu-Jamal's death warrant on 1 June 1995, despite the fact that his Post-Conviction Review Appeal (PCRA) would be filed on 5 June. The execution date is set for 17 August 1995.

Equal Justice USA and International Concerned Family and Friends of Mumia Abu-Jamal have launched an international campaign to keep Judge Sabo off the case, using a Motion for Recusal. Judge Sabo could decide to hear Abu-Jamal's PCRA, the one which would decide that he had exercised a biased influence in the case.

RECOMMENDED ACTION:
Send appeals to authorities:
- pressuring the Philadelphia courts to prevent judge Sabo from hearing Mumia Abu-Jamal's appeal;
- asking the Governor of Pennsylvania to grant a reprieve;
- expressing concern over this case to the United States Embassy in your country.

ATTENTION ALL SHOW PRODUCERS

Zines make great talk on the radio. Zines cover all topics from sex to culture to politics. They are a great source of peculiar and original points of view.

THE ZINE REVOLUTION IS HERE.

Call (212) 431-9515 or E-MAIL: ZINETV2@aol.com for more infrormation.

ZINE-TV hosts Ron Diorio and Lionel Martinez are available to talk about the zine revolution on your radio show. Zines are small - circulation, usually personally published magazines. Zine editors follow the beat of their own drum and offer up their own peculiar view of like. Most recent notable citings of zines in the mega-media were RESISTANCE, a pamphlet put out by people claiming to be Special Forces members of the US military with connections to the militia movement, which 60 MINUTES aired a piece on and THE LATE SHOW with DAVID LETTERMEN had Pete of DISHWASHER appear on his show recently.

FIND OUT WHAT ZINE-TV CAN ADD TO YOUR SHOW.

Each month thousands of zines are published covering topics ranging from NOTHING (about Seinfeld) to PORN FREE (a zine dedicated to getting you offf for nothing) to LUNATIC FRINGE (published by the Psychiatric Inmates Liberation Movement).

Zine-TV can provide you with the odd story line or unique twist that your show is looking for.

For a free copy of Zine-TV

call (212) 421-9515

or E-mail : ZINETV2@aol.com

or write:
Zine-TV
PO Box 977
NY, NY 10014

> on the WWW if anyone would be....is there a page for them???
> JoeWo@aol.com

I don't believe there is one for Z-Rock. KUTZ-98.9 Lampasas TX (Austin) has a site: http://www.fc.net:80/~kahuna/zrock/. It's largely under construction.

The other Texas Z-Rock affiliates don't appear to have a page: KLTR-101.9 Franklin (Bryan/College Station) and KAKS-107.9/1550 Canyon (Amarillo).

Cross-posted to: rec.radio.broadcasting,aus.general,soc.culture.australian

Hyperland, radio feature
Multi Media and Electronic Publishing
airs July 9, 8.30pm, (EST) Radio National,
ABC, Australia.

Welcome to hyperland. Whether we like it or not, hyperland is
where we're all living now.

- Hyperland: where every other day there's a new hyped-up buzz word.
Hypertext, hypermedia, cyberspace, cyberpunk, infosphere, infoverse,
multimedia, multitasking, virtual reality, virtual geography.

- Hyperland: where all the old forms of media that we know and love,
like movies, books and newspapers, get swallowed up and turned into
something new.

- Hyperland: where every other day there's a press conference or a
cocktail party or a conference at which the marketing folks and the
board room heavies and the so called content providers shmooze and swap
business cards.

-Hyperland: you've already been there. Every time us everyday Jane and
George Jetsons choose from the menu on an ATM, we're out in the boodocks
of hyperland. We choose where to go from the rather simple range of
multiple pathways to get to our money.

-Hyperland is also a half hour radio program that talks about all these
things. Written and produced by Rosie Cross and McKenzie Wark, Hyperland
talks to the experts and cuts through the cyberhype.

Source record: 30734

Reply-To: scottshow@aol.com (SCOTTSHOW)

Hey!

Our corporate office has asked me to develop and present a new strategy for marketing our station, and specifically the morning show, in the last quarter of 1995 through 1996.

I have some ideas of what needs to be done in this market; however, I am looking for other fresh ideas and creative input. Also, I would like to have physical examples from other stations and morning shows to include in my proposal/report. Of special interest to me are forms of alternative marketing; a la newsletters, web pages, voice mail, et cetra.

If you have time, and are willing to send them, I would love to see any examples you may have of morning show/station newsletters, faxes, mailouts, on-line newsletters, web sites, voice mail services, new logo designs, on-air promos, tv spots, newspaper ads, et cetra.

Any comments and suggestions would also be greatly appreciated.

You may reach me by fax at 601.426.8255, by voice at 601.544.6494 or 601.422.8263, or send comments to scottshow@aol.com by e-mail.

Your reply will be kept strictly confidential if so indicated. Thanks in advance for your time in this response.

Scott Sands

Date: 1995-07-08 00:00:00 UTC
From: rogernel@aol.com
Message-ID: <3tl651$qb6@vixen.cso.uiuc.edu>
Source record: 30735

How can WRQX (107.3) be so close in transmitter location to WJFK (106.7)? WRQX, I understand is in northwest, DC and WJFK has its transmitter at Rt 50 and I-495 in Fairfax Co. Virginia (with a directional antenna). I thought that the FCC minimum mileage separations for FM stations 600 kHz apart was on the order of 20- 30 miles. Any info? Thanks

# 923. PHOENIX: KHOT Quits

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: Michael Hagerty <Michael_Hagerty@azfamily.com>
Message-ID: <3tl63k$q8o@vixen.cso.uiuc.edu>
Source record: 30736

Less than four months after launching its "Hot Talk" format,
KHOT(100.3) FM has announced it is bailing out.
A news release issued late Friday(7/7)by Resource Media CFO Bijen
Dyrek says that KHOT will drop Hot Talk for a fulltime simulcast of
Modern Rock sister station KEDJ(106.3)
effective Friday, July 14 at 7PM.
Howard Stern will survive...becoming the new KEDJ/KHOT morning
show . Current "Edge" morning driver "Dead Air" Dave(who just lost
co-host Jayn Sayd to KNRK in Portland) moves to afternoons, replacing
PD John Clay who will devote fulltime attention to programming.
KEDJ station manager Roberta Clevenger says the simulcast will
give KEDJ full market coverage. KEDJ's
transmitter is in Sun City(Northwest of Phoenix), while
KHOT's is in Globe(Southeast of Phoenix).
Weekend programming is already off the air, replaced by the KEDJ
simulcast.
As of 7PM July 14, the Mike Walker, Susan Loggins, "Love Phones"
and Tom Snyder shows will be homeless.
KHOT was supposed to be the grand return of former KFYI(910)
afternoon host/PD Tom Leykis to the Phoenix market, but his
syndicated afternoon show is gone as well. In fact, his will be the
last talk voice heard on the station on the 14th. Prior to the
launch of the format March 16, Leykis had said the KHOT affiliation
would be "KFYI's worst nightmare".
The simulcast announcement comes two and a half weeks after the
firing of KHOT/KEDJ/KGME GM Kathy Lawrence, who switched KHOT from
Heavy Metal KZRX.
...and 10 days after the firing of PD Carla Foxx, who was hired by
Lawrence to make that transition.
Foxx had reportedly been offered a nighttime talk show on KHOT,
which she declined only this week, prompting speculation as to how
long Resource Media had planned to
dump Hot Talk and simulcast KEDJ.
Since the swap, KHOT had dropped to an 0.7 in the Winter
book...and is rumored to have sunk even further in monthly trends.
During the same time, longtime talker KTAR(620), which carries no
syndicated shows, has roared into first place 12+...and is rumored to
have doubled KFYI's (Barry Young, Rush Limbaugh, Bob Mohan, Ken
Hamblin, Art Bell)12+ number in the monthlies.

## 924. AOR or *Modern Rock* Stations in Portland, OR & NYC?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: thawley@netcom.com
Message-ID: <3tl652$qbb@vixen.cso.uiuc.edu>
Source record: 30737

Greetings,

Over the summer, I'm planning trips to Portland, Oregon and also to New York City. I was wondering what the stations are like in both places. I'm looking primarily for stations that play either Modern Rock, Classic Rock or just old-fashioned AOR.

Also, if there are any Willamette Valley folk here, what is K104 in Lebanon doing these days? I worked there back in 1980-81, & I'd like to know if they're still around? :))

Just email me..I don't want to take up bandwidth here..

thanks,
-th

## 925. Local Station runs afoul with the law...

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: rrb@clm.aiss.uiuc.edu
Message-ID: <3tl63l$q8p@vixen.cso.uiuc.edu>
Source record: 30738

Dateline: Springfield Missouri

Local 500 watt, daytime station, KTOZ is in some trouble with the government. Not the FCC, but the US Department of Labor (DOL).

This small station was bought out of bankruptcy court, and now runs a locally-programmed Big Band and Nostalgia format using an all volunteer staff. Even GM and primary stockholder Ron Johnson is an unpaid volunteer.

The problem is stemming from the fact that there is a law on the books which prohibits a 'for profit' entity from accepting volunteer help. The DOL is now investigating Ron and KTOZ and may institute suit attempting to stop the practice and to force KTOZ to pay retroactive wages to all who have volunteered as DJ's and other positions since last year when the station was resurrected from the dead.

Interestingly, there is an exception in the law that permits citizens to volunteer time for a politician, who certainly is a 'profit making' entity.

Since the investigation began, KTOZ has received much mail from listeners who are shocked and dismayed that this small station, which barely clears enough to pay for its utilities and minor maintenance, is the target of government officials and may be shut down. The local newspaper, the Springfield News Leader, has come out in support of KTOZ, and has published editorials to that effect, as well as several letters in support of the station, written by readers.

The volunteer jocks are also outraged that a government agency can come in and tell them how they may spend their free time. "Nobody has lied to us" said one DJ "... nobody misled us. I am very happy to be able to do this, to learn, to have freedom on the air, and to serve an unserved listener-base here..."

Indeed, the experience that these volunteers are gaining is invaluable. Everyone knew what the deal was when they came in and all are quite happy to be here, money or none. One air-personality, Kenny Rogers (no relation) said "It is good that we are not getting paid. If we were, it is likely that the great working relationships we have here would be strained ... As it is, we all work together very well."

Station manager Johnson has said that when and if the station starts making money, everyone will be paid. In the mean time, it is a matter of doing it this way or going off the air, and who is served by that?

"We all understand that the wage laws are in place for a reason. Many of us who are old enough remember (or have heard of) the sweat-shops and slave-like laobr where little or no money was paid to workers and owners reaped huge profits. But in this case that is not so. The books are all open at KTOZ. Everyone knows what the station brings in and pays out. There are no tycoons, slave-owners or sweat-shops here, just people who love radio and love providing a source of good music to an audience that appreciates it.

The KTOZ affair has generated a lot of local and regional press, and will be the topic of an upcoming talk show on the USA radio network *THIS SUNDAY July 9th at 2:30pm Pacific Time*.

If you have a satellite receiver, you can hear this show on satellite Spacenet III R (87 degrees West Longitude) Transponder 7H (also known as channel 13) at an audio carrier of 5.20 narrow. It is also aired on many USA affiliate stations. On this program, Ron Johnson will discuss the current situation and how the outcome will "... affect the future of volunteerism in America..."

I will try to have scans of recent news articles on this subject on the AIRWAVES WWW page soon. You can call Ron Johnson, or any of the other volunteers at KTOZ-AM The number is (417) 831-1060 during business hours, or fax them at (417) 831-1231.

# 926. Re: How do you use the Internet at your radio station?

Source record: 30739

Hello from England !!

We're a station called MIX 96 based in Aylesbury (40 miles from London).

We use the Internet for a number of things :

Firstly our automation hardware/software came from the US (The Enco DAD486x). We get software updates via it and report problems via E-Mail. It's a lot cheaper then dialing into their BBS in the US.

Also our sales team use it to talk to their clients and our promotions team get files from companies via it.

Hope that's of some interest to you.

Have you heard of the Enco DAD486x playout system and are any stations using it on the Net ???

E-Mail jon@mix96.demon.co.uk

## 927. Underground Network now on Cape Cod

Source record: 30740

Reply-To: @mrnews.mro.dec.com:anderson@funyet.dnet.dec.com (Paul Anderson)

While driving through Rhode Island last night, after growing tired of all the same alternative songs over and over again on the new WDGE Wakefield RI (99.7), I found some interesting music on 101.1. It turns out that both WFXR Harwichport MA (93.5) and WFAL Falmouth MA (101.1) have joined the Underground Network based at WDRE on Long Island.

I've also heard the UN Albany-area station, and the way they work in the station frequencies is interesting. No calls are usually mentioned, but during song intros, the station(s) identified themselves as "UN 93.5 and 101.1".

I'm sure this format will do much better than the satellite country the stations previously were saddled with. ;-)

Paul

## 928. NPR drops programming....

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: "Michael Black...WEOS-FM" <BLACK@HWS.EDU>
Message-ID: <3tl653$qbd@vixen.cso.uiuc.edu>
Source record: 30741

In response to David Kaye's post, and as GM of a small member station, part of what he suggests is not really true. NPR is dropping some programs, including classical. I am disappointed to see Bluestage, Rhythm Revue, E-Town, Crossroads and Horizons dropped off the schedule. However, not all is $$$ motivated, Some are producer calls, such as Crossroads. Felix Hernandez is producing new series for Public Radio International, and his time is being taken away from other projects. I am dissappointed that Horizons is going away. It is a great show.

However, E-Town and Afropop Worldwide will still be in production. Afropop is going to PRI and E-Town, at last fax, was going independent. NPR has made an aggressive expansion of its Jazz schedule, something that I would say would not be classified as "non-ethnic, Non-Yuppie." In addition, there are series on Hispanic issues and music being planned and NPR maintains distribution of Latino USA. So, I thwe should wait and see what the fallout is going to see, before jumping at labels.

My personal Losses: Bluestage and Rhythm Revue. Both shows are quite popular on our air.

# 929. Sacramento Radio News - 7/7/95

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: mward@crl.com
Message-ID: <3tl63n$q8u@vixen.cso.uiuc.edu>
Source record: 30742

Greetings from market #32! (Or is it 28?)

First of all, let's get the stuff about my employer out of the way first...and even an item about me. (I promise not to bore you too much. Incidentally, a non-affiliated local RadioWatcher would be welcome here...since Mark Lennartz booked to Portland, we need a replacement. Feel free to step in!)

* KFBK (News Radio 1530) reporter turned sports guy turned reporter Geoff Flynn has turned sports guy again. (Geoff's really causing some dizziness around the newsroom.) He steps into the morning drive sports anchor role, replacing Pete DuFour, who works full-time off-air in state government and continues his role as high school sports broadcaster for KNCO/Grass Valley. We don't get rid of Geoff in the news side of the newsroom, either... his flexibility will still come in handy for our part of the equation.

* Speaking of KFBK, and, well, myself... I'll be starting off as Saturday morning news host this week (7-9 AM and noon-1 PM), with the one and only Rebecca Green along with me as well. (We already team up for the Sunday morning news from 8-9 AM.) Hope you join us.

* Elsewhere - KIMN (Magic 1380 - R&B, sports) picks up the local radio rights for Oakland Raiders football, according to published reports. I'm unsure of this one, though, as I don't recall that there's even a Bay Area flagship station for the returned-to-Northern California team. Anyone down there want to clear this one up for me? Incidentally, the Sacramento Bee, the source of this information, still hasn't corrected the call letters for Magic 1380 anywhere in the paper - news or sports. The ex-KSMJ changed call letters legally within the past month. The trade of the station and co-owned KSFM (FM 102 - CHR/Urban) to Henry Broadcasting from Tribune is still pending. Magic 1380 is currently the San Francisco Giants affiliate in Sacramento and also carries a heavy dose of satellite sports talk in the night-time hours.

That's it for now.

Mike, the views and opinions expressed are my own

Reply-To: ewarner@bgnet.bgsu.edu (elizabeth warner)

And the Hits just keep on coming...........

Only a week after Carrie Collins was fired from WVKS, WXKR (94.5)
has let go two thirds of their morning team. Jeff Lamb and Mark Benson
were released last Thursady. WXKR's Station Manager Dennin Lemon
released a satement saying that the popular morning duo of Jeff anf Mark
were released, "Due to the lack of significant ratings increase in the
morning show over the past 18 months......."
When Jeff and Mark left cross town rival, WIOT (104.7) just 18
months ago, to do themorning drive slot on WXKR the rating went from a
3.2% to 7%.

Replacing Jeff and Mark will be Kevin Matthews' syndicated show from
Chicago.

In other AMAZING news Toledo's only local newspaper, The Blade, did a
story on Jeff Lamb and Mark Benson being fired. This marks the first time
since Jeff and Mark left WIOT, 18 noths ago, that The Blade has done a
story on Toledo radio.

Paraquat Kelly was brought in by WNEW-FM in New York City
to be the morning man a few years back. They hoped that the
large success he had in L.A. (with a name reminiscent of things
late 60's - early 70's) would happen in New York.

The success never happened, and the WNEW morning host
revolving door continues to turn slowly.

(How many 18 year olds know the significance of 'paraquat'?)

Paul Richards
conservative MP and part time TV Game Show host

Reply-To: ewarner@bgnet.bgsu.edu (elizabeth warner)

WVKS (92.5) KISS-FM has released their midday host Carrie Collins for undisclosed reasons. Carrie finished her show at 3PM last Friday, June 30th, and was let go immediately follwing her show. No reason was given for Carrie's firing.

Collins has been working middays at WVKS for 3 years. Shortly after Collins got the midday show at WVKS she was diagnosed with Hogkins disease, whch caused her to miss a lot of work. About a year ago she went into remission, and is about fully recovered from it now.

Roland Reddick will be filling in the midday shift until a new replacement is named at the the end of July.

Market legend Steve Goddard(KPSN, Y95, KKFR, KZZP and KCBQ, San Diego) has hung up his rock and roll shoes to do country at KNIX(102.5). It's weekends and fill-ins for the time being, but the Oklahoma native knows and loves the music.
Goddard's been on the beach since the week after Thanksgiving, a casualty of the switch from oldies "Sunny 97" to 70's K-Hits 96.9.

## 935. Sonny Bloch

Newsgroup: rec.radio.broadcasting
Date: 1995-07-08 00:00:00 UTC
From: afn09595@freenet3.freenet.ufl.edu
Message-ID: <3tl640$q9j@vixen.cso.uiuc.edu>
Source record: 30748
Cross-posted to: alt.radio.talk,rec.radio.broadcasting

Reply-To: afn09595@freenet.ufl.edu

More on Sonny from The Wall Street Journal 7/7
NEW YORK -- Nationally syndicated radio-show personality Irwin H. "Sonny" Bloch was indicted by a federal grand jury here on charges of tax fraud, perjury and obstruction of justice.
Mr. Bloch, who already faces federal charges of defrauding his listeners out of $21 million by pitching fraudulent investment schemes, was charged in an eightcount indictment with failing to file income-tax returns for 1991, 1992 and 1993.
The indictment accuses him of hiding more than $700,000 in income from his radio show and sales from books he co-authored on real estate during the three years. He also allegedly caused his radiobroadcasting company, Broadcast Management Corp., to file false corporate-tax returns by claiming more than $500,000 in phony business deductions that included payments for personal expenses and those of family.
Mr. Bloch, 58 years old, is also charged with committing perjury before the Securities and Exchange Commission on Sept. 12, 1994. He allegedly testified falsely that he didn't control his income and only got an "allowance" from his wife and ex-wife.
His lawyer, Richard Asche, said that he expects his client to plead not guilty. No date has been scheduled for Mr. Bloch's arraignment.

Exactly - by the time I got to it, the DPE was a poor man's DAP. However, for
$60 and a few hours of labor, it did the job. In this case, we were using
the taller CBS Audimax/Volumax. It was hard to make bad sounding audio with
them although the price was loudness. But on that very subject, the Audimax
lent itself to being easily hot-rodded by tuning of the release time.
Pumping could be mitigated by inserting a slight low frequency
turnover at the input to the control circuit. One could derive a very full
sounding signal from this unit. It would be aesthetically unacceptable in
today's market, both FM and AM, but it was great for AM then. (and fun to
use as a jock!)

As for the Volumax, by replacing the
epoxy brick at the output with discrete (and hand matched) diodes, you could
achieve greater loudness at the expense of distortion. The architecture of
the unit caused a rather interesting side effect when this was done. (I;ll
spare the boring details for now...) Did you ever modify either of these units?
There were ways to make them a lot louder than stock but at the expense of
distortion; then the input levels had to be set very carefully to balance
loudness vs. distortion. In the 70's, it was a great way to get competitive
on a budget.

I also used the slimline units in FM installations and had the same experience
regarding low end response as you -- I never liked them.

Jack,

Up until four years ago, I worked for a contract engineering company that serviced the Norwich stations. At that time, they were owned by Matt Cooney. I'm not sure if that is still the case, but do know this....

The building you remember was destroyed (sorry) by a fire of "suspicious origin" that started in some kind of clothing shop on the first floor. That was about 5 or 6 years ago. Cooney purchased a building (I believe it was a former Dept of Motor Vehicles Office) next store to the local paper, and we built new studios from scratch.

As far as I know, my ex-boss (Ken Ruhland of Central Broadcast Engineering) is still the engineer for those stations. I'm now on staff with a company that owns 2 FM's & 2 AM's (and has a sales agreement with 2 more AM's) in my hometown of Buffalo.

Just FYI

I believe this used to happen in the New York's Hudson Valley. Too many colleges and religious broadcasters duking it out for spectrum, and I think WFNP(FM)/New Paltz got into one of these deals.

Can anyone verify this?

Mark Roberts is correct about the time-share between KTAV and KRLS in Knoxville, IA. KTAV was a monophonic religious station with easy listening music. KRLS was owned by KNIA, the AM station in Knoxville. KRLS only carried sports broadcasts.

I belive the share-time agreement came when 92.1 was allocated to Knoxville (I don't know the year). The owner of KNIA and the religious group were the two applicants. The religious people had the better chance of getting the license had it gone to a hearing, since they didn't have any other broadcast interests. KNIA had more money and coul;d afford to keep it in court. I guess the KNIA people decided they could live with just the sports revenue (since KNIA either had no or a very limited night signal).

The arrangement ended a few years ago when KTAV was purchased by KNIA/KRLS. KNIA and KRLS simulcast an AC/oldies format now.

CHYR is no longer on AM at all...since at least a year ago (and I think even longer), they've been on 96.7 FM. But the Detroit area still has a split-freq AM. WNZK, Dearborn Heights is on 680 daytime, and moves to 690 at night. I have tape of the switch...kind of amusing. As for the other Canadian AMs, CKWW-580 and CKLW-800 are both under common CHUM Group ownership (along with CIMX-88.7 "89X" and CIDR-93.9 "The River"). CKWW is satellite standards, CKLW is local talk by day, One-on-One Sports by night.

Reply-To: afn09595@freenet.ufl.edu

For your dining and dancing pleasure....

From The Wall Street Journal 7/7/95
NEW YORK -- Nationally syndicated radio-show personality Irwin H. "Sonny" Bloch was indicted by a federal grand jury here on charges of tax fraud, perjury and obstruction of justice.
Mr. Bloch, who already faces federal charges of defrauding his listeners out of $21 million by pitching fraudulent investment schemes, was charged in an eightcount indictment with failing to file income-tax returns for 1991, 1992 and 1993.
The indictment accuses him of hiding more than $700,000 in income from his radio show and sales from books he co-authored on real estate during the three years. He also allegedly caused his radiobroadcasting company, Broadcast Management Corp., to file false corporate-tax returns by claiming more than $500,000 in phony business deductions that included payments for personal expenses and those of family.
Mr. Bloch, 58 years old, is also charged with committing perjury before the Securities and Exchange Commission on Sept. 12, 1994. He allegedly testified falsely that he didn't control his income and only got an "allowance" from his wife and ex-wife.
His lawyer, Richard Asche, said that he expects his client to plead not guilty. No date has been scheduled for Mr. Bloch's arraignment.

(Note - these are additional charges, and charges that are rarely handed down without a near assurance of conviction. Methinks Sonny will be thrown so far back in the Tombs that they'll have to feed him with a slingshot....wc)

Rich writes about sports radio:

>The granddaddy of them all (WFAN, New York) is doing very, very
>well. The numbers aren't very good, but it's one of the most profitable
>stations in the country.

Likewise for Nobel's XETRA AM 690. While based in San Diego and studios in Los Angeles, the Baja station IS THE SPORTS AUTHORITY in the southland. The trends go up and down -- XETRA's lack of a baseball team has the summer down -- but football is it's forte. [SD Charges, and a great UCLA package]

[XETRA-AM, 690, 50kw DA with a new seven tower array coming on line soon at its site on Rosarita Beach, Baja California norte, Mexico]

>the most successful sports stations are the ones who've locked up the
>important local sports franchises.

KBAX [107.1 Fallbrook] and it's sister stations in the LA basin have made inroads from foreign-language [Korean and Japanese] to an alternative sports programming, mainly with the "Fab. Sports Babe." but Rich's comments above will ring true. I was told that the station[s] is/are be for $ale. [KBAX, KMAX, and one other]

However, for sports it's the mighty 690, XTRA sports.

Also noted: Chet Forte is recovering from open-heart surgery and is out of the XTRA lineup. Forte, who is known for *excellent* producing [a.k.a Monday Night Football and other programs] is reportedly at home resting before coming back [as of July 3] to the station.

>Subject: Re: All-sports formats (and more)

RR> From: KUZZ1@aol.com

RR> IMHO, sports-talk works only in very large markets, with local
RR> big-league franchises and major colleges to talk about, and
RR> enough of a population bas that you don't have to worry about
RR> its very narrow demographics.

I would have thought that Los Angeles would fulfill those criteria.
But, as others have pointed out, KMPC was not successful with that
format and is now a CC/ABC O&O whose main claim to fame is hosting
the Tom Leykis show and then repeating it overnite. According to
what I've read, KMPC's mission is to chip away at top talker KFI.

IM*N*O, it is San Diego's KOGO (which reaches the SouthBay as well
as any LA station) that is stealing from KFI with KOGO's stimulating
line-up of Imus, Liddy, North, PD Peter Weisbach <sp???>, Mike Reagan,
Roger Fredenberg (the self-styled "Radio's Regular Guy"), and Art Bell
with Bob Grant's national program on Saturday morning.

Canny Weisbach bumped Liddy, North, and the beginning of his own
program to carry the OJ extravaganza gavel-to-gavel. From what I
have heard, OJ is pumping up KOGO's mid-day ratings. [Whilst the
Dancing Itos play, KOGO bumped Fredenberg to weekends in order to
run to more popular Liddy.]

Y'know, with all of our talk and news radio stations [KOGO, KFI,
KMPC, KABC, KIEV, KNX, and KFWB to name the most prominent], it
occurs to me that the "Community Service Requirement" (better
known as The Sunday Morning Graveyard) has outlived its usefulness.
After all, why should 50s60sPop KLAC run an appallingly boring
PubAffairs block at 6 AM Sunday?
Does KFI offer a Sunday hour of Sinatra?

|: yet?

Plenty, from the Telos Zephyr (excellent 15k stereo over an ISDN line) to a new CCS box that can get 7.5k mono, under the right conditions, over an ordinary voice-grade phone wire. These gadgets are expensive, but they do the job. Call a good broadcast supplier like Allied (800-622-0022) or Bradley (800-732-7665).

Or, if you can't afford multi-kilobucks but want pretty good realtime audio, how about using a one- or two- line analog line extender? Call the broadcast house and ask about Comrex's excellent boxes.

Or, if you want good digital transfers but don't need _absolute_ realtime, check out the system CBC News is using. I wrote a sidebar on it in my feature on new audio technologies in this month's Digital Video Magazine (available at newsstands everywhere).

No, no complaints were filed. There is no interference.
WCHS is 5,000 watts non-directional daytime, and in my car I could pick it up in Charleston (obviously); Cincinnatti, Ohio; Roanoke, Virginia; and on the PA-WV border, although it was rather poor quality.
Where WCHS excells is the night pattern. It's 5,400 watts on a four-tower array on a ridge above Saint Albans, West Virginia. In fact, at night from I-64 it looks as if the WCHS towers are a giant wall protecting the valley. Very ominous. WCHS is one of the few stations I've worked for that actually didn't lose any of their service territory with their nighttime pattern. Even though they've got a great signal, which covers half the state, they don't try to serve much beyond the adjoining counties because there's no point. Charleston is the largest market in the state, and with their signal they hit half the state's population in four or five counties.
The main competitor, WQBE-AM, is also a 5,000 watt daytime signal, but they drop to 1,000 watts at night, and since they are physically outside of town, the signal doesn't do very well in key locations-- like the capitol buildings.
'QBE makes up for this by keeping their 5,000 watt power even after sunset if they're going high school football games. Sure it's not legal, but apathy is rampant in Kanawha Valley broadcasting.
As a side note, WCHS(AM) ("Newsradio 58") also owns WCAW ("68-CHS"). When the new company bought WCAW a couple of years ago, they took it from a 50,000 watt directional daytime signal to a 10,000 watt non-directional signal. The nighttime wattage is somewhere between 60 and 280 watts, depending on if you ask the engineer, the owner, or the sales staff. Either way, you can sit 30

feet from the WCAW tower at night, and still pick up WPTF in North Carolina.

Source record: 30687

* New Morning Voice on 'ZLX :

On Monday, July 24, Infinity's CR WZLX 100.7FM will introduce a new morning drive personality to its line-up -- George Taylor Morris,48, makes his return to the Hub since leaving the old AOR WCOZ-94.5(now WJMN-FM) back in 1977. Currently LA-based, Morris is better known for his syndicated classic rock program "Reelin' In the Years", which will no doubt somehow find its home on 'ZLX as well. ['ZLX dropped the show a few years back]. Morris hasnt done 'live' FM-rock radio show since leaving NYC's old WPIX-FM back in 1978(!).

Morris replaces 22-year Boston radio vet Ken Shelton whose contract at the "Boston's Classic Rock Radio Station" was not renewed last month. Ironically, Morris and Shelton worked together at the old WCOZ.

* WBZ News :

First, Correction : In my previous Boston Radio Watch, I incorrectly reported that WBZ AM 1030 is now getting its nightly news updates from MetroNetworks. That is not the case...yet. However, that was the original plan by WBZ management which ran into some internal difficulties with the local AFTRA union...I apologize for giving out the wrong info.

Now, this is really official : WBZ's popular Sunday night 3-hour(6pm to 9pm) sports call-in show 'Calling All Sports' made a major personnel move on Thursday(July 6).

After 5 years as the host of the program, Upton Bell, former NFL Patriots GM, local sports TV/radio personality was fired by the show's producer and co-host, local businessman Norm Resha. Resha leases air-time from WBZ and pays all the production costs. WBZ-TV sportscasters Bob Lobel, Steve Burton and new the radio voice of the Boston Bruins Bob Neumeier will alternate as hosts. Also, Sports Illistrated columnist Gerry Callahan was added as a panelist.

* Programming Notes :

-Haverhill's WLYT-92.5FM's playlist is fast becoming a mirror image of cable music channel VH-1 : lots of old of 1980's pop rock[Howard Jones. Thomas Dolby, Squeeze, Pretenders, Psychedelic Furs, The Fixx, U2, REM, Eurythmics,etc] with a little mix today's AC rock. I cant quite make a call on this new new hybrid format yet. It does lean heavy towards AAA.
One noticeable difference : all references to 'Lite Rock' are gone.

Possibly more format tweaking is still to come...

-'Smooth 99.1'(WPLM-99.1FM) which flipped from AC to NAC on June 25th,
is being very cautions as not use 'Jazz' anywhere in its promos.
Correct move. One of the downfalls of the old 'Smooth' WCDJ-96.9FM
(now WBCS-96.9FM) was that it tried to promote itself as a jazz
station which offended many true jazz fans in the Boston area.
To sample the real thing, tune in to any of the college/non-commercial
FM stations in town and you'll hear the difference...

-Mark

# 956. DMX VS FM Summary

Newsgroup: rec.radio.broadcasting
Date: 1995-07-09 00:00:00 UTC
From: gcjh1@aol.com
Message-ID: <3tnp9a$7ok@vixen.cso.uiuc.edu>

Reply-To: gcjh1@aol.com (Gcjh1)

First I would like to thank everyone who responded to my post. Over 40 of you had something to say. Some positive some negative. Without quoting authors (don't want to sound like a flame) here is an overall view of comments....

The most common point made was radio in your car, walkman, beach, etc. Until they perfect the technology (not being a tech junkie I don't know if it is around the corner or lightyears away) FM will always need to exist for the portable use. "think of all the radios you own with handles"

Wether people would pay $6-10 / month for digital radio at home varied. About half the posts or EMAIL were from people who had DMX already at home. So that answer the question about if people would be willing to pay.

Another frequent comment was variety. (mostly from non radio people) If your in a small market with only a half a dozen stations the variety of DMX was a major plus. The reason I think these people weren't radio folk is because the most common comment was "to tightly programed radio" HMMM?

Talk Radio was another reason given as why DMX will not replace FM. Talk is scores well in many markets. So heres a question... If DMX takes away from lite format FM's will there be more FM talk stations?

The major point that only one EMail made was at work. If your station has great mid day numbers from the people listening all day at work DMX is a major threat to that type of format. When the office switches to DMX (which many in our marketing area have) then there goes that great 9-5 diary entry.

Some program directors and alike (I assume) had comments on DMX's programing. This is true on some of the AOR (all over the road) DMX channels. They need a little help there.

Overall most felt DMX is some threat. Somewhere above CD, tapes, etc. yet not quite like megastation moving in next door.

THANKS AGAIN...

: Local 500 watt, daytime station, KTOZ is in some trouble with the
: government. Not the FCC, but the US Department of Labor (DOL).

: The problem is stemming from the fact that there is a law on the books
: which prohibits a 'for profit' entity from accepting volunteer help.
: The DOL is now investigating Ron and KTOZ and may institute suit
: attempting to stop the practice and to force KTOZ to pay retroactive
: wages to all who have volunteered as DJ's and other positions since
: last year when the station was resurrected from the dead.

(SARCASM MODE ON)

Why, radio station owners are bottomless money pits. They can afford to pay these poor deluded people who were taken advantage of by this evil owner.

(SARCASM MODE OFF)

And some of you wonder why owners go satellite. Hint: it's not always to avoid hiring talent...or paying them.

: Interestingly, there is an exception in the law that permits citizens
: to volunteer time for a politician, who certainly is a 'profit making'
: entity.

What, you mean those same politicians who get Lowest Unit Rate at election time? No! They'd never write any self-serving legislation...

: The KTOZ affair has generated a lot of local and regional press, and
: will be the topic of an upcoming talk show on the USA radio network
: *THIS SUNDAY July 9th at 2:30pm Pacific Time*.

: If you have a satellite receiver, you can hear this show on satellite
: Spacenet III R (87 degrees West Longitude) Transponder 7H (also known
: as channel 13) at an audio carrier of 5.20 narrow. It is also aired
: on many USA affiliate stations. On this program, Ron Johnson will
: discuss the current situation and how the outcome will "... affect the
: future of volunteerism in America..."

Sadly and for a variety of reasons unrelated to Radio (which is why I won't get into them) volunteerism is dead in America.

From: ingraham@ultranet.com
Message-ID: <3tnp9d$7op@vixen.cso.uiuc.edu>
Source record: 30691

I was a bit too young to be in radio in the '65 blackout. We listened to WBZ all evening.

I had been reading Orwell's "The Time Machine" and had just reached the point where he goes FAR into the future and the sun starts dimming, and while I'm reading this, the lamp next to me slowly starts dimming! After 20 seconds it was out, then came on again, then slowly dimmed again, and went out for good.

I do have a story from the New York city blackout in the late 1970's. At the time I worked at an ABC affiliate.

Our ABC feed line went totally dead. I don't recall now if the UPI machine was affected. We put the ABC line on a speaker in the tech area so we could hear if anything came over. An hour or two later we heard something like, "Hello, can anyone hear me?" and a lot of mumbling for a while, nothing worthy of air. It was clear they were using make-shift equipment, probably battery powered.

Later we heard what happened. ABC was in the middle of a NABET strike, so the real engineers weren't around. When the power failed, and the emergency generator didn't come on, the engineering manager himself (whose name I won't mention in case he's still around) went up to the roof and apparently found not enough gas in the tank.

So he spent the next hour trying to siphon gasoline out of parked cars in the neighborhood!

I *think* (it's been a while since we heard the story) that he managed to get some gas into the tank, but STILL couldn't get it to start, at which point it is said he broke down in tears.

I don't recall if he kept his job.

Regards,
Andy Ingraham

From: wd8jeljim@aol.com
Message-ID: <3tnp9f$7ou@vixen.cso.uiuc.edu>
Source record: 30693

Oh, I am sad to hear of the passing of John Doremus. I recall hearing him while vacationing in Central Michigan in the 60's and 70's, when he was heard on (then) 102.5-WGER. which blanketed the middle of Michigan. John's very professional and personable airstyle gave a large quantity of quality and credibility to this station (and others he was heard on). I really enjoyed his music sets and commentaries. Another fine broadcaster is gone from us.....

# 962. Re: Fake call letters and phoney *legal* ID's (was: Re: WPLM-FM Plymouth)

Newsgroup: rec.radio.broadcasting

Source record: 30694

This is somewhat related to the thread... Program Directors aren't the _only_ ones to get around legal-ID regs:

Political advertising genius Tony Schwartz invented a response to the post-Watergate requirement that campaign spots include the wording "Paid for by" and the legal name of the sponsor ("Committee to re=elect Joe Blow", "Clone for Congress Committee", etc).

First, he'd have the candidate set up a legal entity called "People who Want to See Porque Barrell Clean Up our Government, Inc". It made for a long caption on the checking account, but is perfectly legal.

Then, he'd bury text like this in the spot:

"...those documents prove we can't afford a scumbag like Joe Blow in office any more. That's why this announcement was carefully researched, checked, recorded, re-checked, and paid for by people who want to see Pork Barrell... etc"

: going to PRI and E-Town, at last fax, was going independent. NPR has made an
: aggressive expansion of its Jazz schedule, something that I would say would not
: be classified as "non-ethnic, Non-Yuppie." In addition, there are series on
: Hispanic issues and music being planned and NPR maintains distribution of
: Latino USA. So, I thwe should wait and see what the fallout is going to see,
: before jumping at labels.

***** IF NPR has in fact made any real effort to expand Jazz Programing,
I would certainly like to see some evidence.... And hopefully some vocal
support from the Jazz Listeners... It appears that Jazz is not old enough
to be of interest to the psedu-intellectuals who like to be seen
listening to Classical, not new enough to interest the kids who are still
jumping from fad to fad on a monthly basis, and too mainstream to interest
the new crop of ethnicly aware African-Americans who seem to have
forgotten that Jazz is also part of their roots.

The Wade in The Water Series, funded by a grant from The Corporation for
Public Broadcasting has ended, and nothing seems to be in the Pipeline.
For this, we must look towards Congress who has always been more
interested in Polictical Dance than Good Jazz.

I recall that several stations were concerned when WJFK and (now)
WJZW moved to the Merrifield tower. It took a lot of hoop-jumping to
accomplish. The opportunities for undesirable mixing products were
evident. We still get the occasional complaint about poor reception of
our carrier in that area.
We have always wished our coverage was better out into Fairfax
County and assumed the problem was the shadowing caused by high land in
the Tyson's Corner vicinity. We once considered erecting a repeater to
fill in the gaps out there, but never did it. The Merrifield site only
aggravated the older problem.

Elsewhere - KIMN (Magic 1380 - R&B, sports) picks up the local radio rights

Why in the world would a station in SACRAMENTO want the call letters KIMN?

Since this station is owned by Secret Communications, owners of "The New KIMN-FM" in Denver, my guess would be that they intend to purchase an AM in Denver for a simulcast and are doing this as a means of "holding" the KIMN calls (?)

-Drew in the Twin Cities-

[Moderator's Note:: It is common for same-call-different-band stations to exist in totally digfferent markets. No need to buy or co-own. For example there is a WBEE-FM in Upstate New York and WBEE-AM in south suburbag Chicago. Bill]

WOW! How many frequencies are there on 88.9? One that was left off that list is 88.9 WMNJ, our 10 watt NCE station here at Drew University in Madison. One Wednesday last semester during my show with co-host Augie, the interference was so bad that you could barely hear our show at times, and I taped it from the dorm next to the station! Before our station goes on in the morning, you can hear 88.7 WPSC (200 watts), the station of WIlliam Patterson College, Wayne, NJ. If our station is off for some reason in the afternoon, we get a very loud station form Staten island. (Here comes the question.) How srtong is the Staten Island station and who runs it? How about the Smithtown station? (and where is SMithtown anyway?) We desprately want an upgrade (at least to maybe 20 or 30 watts), but I was told by someone there are no more upgrades until the year 2000. BTW, FDU has a campus in Madison just across the street from our campus. Hope someone can advise. Thanks.

## 969. Melbourne, Australia RadioWatcher

Newsgroup: rec.radio.broadcasting
Date: 1995-07-11 00:00:00 UTC
From: thed@mundil.cs.mu.OZ.AU
Message-ID: <3tt1fc$br3@vixen.cso.uiuc.edu>
Source record: 30569

```
Radio News, from Melbourne, Australia.
======================================

3MMM, "Triple-M", 105.1 MHz
3FOX, "Fox-FM", 101.9 MHz

Late in 1994, the Austereo Network (FOX-FM (3FOX) Melbourne, 2DAY-FM (2DAY)
Sydney, FM104.7 (2ROC) Canberra, B105 (4BBB) Brisbane, SA-FM (5SSA), affiliates
SEA-FM (4SEA) Gold Coast, PM-FM (6PPM) Perth, TTT-FM (7TTT) Hobart and
HOT 100 (8HOT) Darwin) merged with the Village Triple-M Network (3MMM, 2MMM,
4MMM, 5MMM & 6MMM in Melbourne, Sydney, Brisbane, Adelaide and Perth) to
form Australia's largest commercial radio network. As a result of this, the
company has two stations in many of Australia's cities, and therefore
some stations have changed formats in order complement each other, rather
than compete.

3MMM in Melbourne is now the only station in Melbourne playing 80's and 90's
rock, and it has a heavy emphasis on recently released music. An interesting
addition to its format is "Home Grown" on Sunday nights, which consists of
2 hours of music from new Australian bands.
The weekday lineup is as follows:

6.00am - 9.00am: The Richard Stubbs Breakfast Show - comedy
9.00am - 12.00pm: Kevin Hillier - music
12.00pm - 3.00pm: Kent Forbes - music
3.00pm - 7.00pm: Ed Phillips - music
7.00pm - 10.00pm: The Hot 30 Countdown with Mobbs - pop music

The breakfast show is also relayed to 2MMM in Sydney.

FOX-FM, under the new management, has had a complete format turnaround.
Formerly a Classic Rock station, FOX is now playing a high proportion
of dance and pop music, and appears to be aimed at the 10-17 year old
age group. This is an interesting situation, given that the breakfast
show team, which has a long history on other stations, is really
designed for the 18-27 age group.
The weekday lineup is:

6.00am - 9.00am: Danger: Low Brow - comedy
9.00am - 1.00pm: The Grubby and Dee Dee Show - music,chat
1.00pm - 5.00pm: Barry Bissell - music
5.00pm - 7.00pm: Martin/Malloy - Tony Martin/Mick Malloy - comedy
7.00pm - 10.00pm: Phil O'Neill and the Hot 30 - pop music

"Martin Malloy", a comedy show by two members of the cult Australian
comedy team, the "D-Generation", is also relayed to 2DAY-FM Sydney,
B105 Brisbane and SA-FM Adelaide.
```

Unfortunately, while 3MMM and FOX-FM are attempting not to compete, their
nighttime Hot 30 countdown shows are primarily aimed at exactly the
same age-group (10-17). I have no idea why they are doing this.

3KKZ, "Gold-FM", 104.3 MHz
3TTT, "Double-T FM", 101.1 MHz
==============================

Following the merger of Austereo and Triple-M, Austereo had to sell
off station Gold-104, due to Australian laws allowing the ownership of
no more than two stations by one company in a single market. Gold-104
was bought by the Australian Radio Network, a recent merger between
the Albert radio group and the Wesgo network. This network also owns
TT-FM (3TTT) Melbourne, MIX-FM (2MIX) Sydney, 2WS-FM (2UUS) Sydney,
and 4BC Brisbane, along with a whole string of regional stations.
As a result of the purchase of Gold-104 and the merger, the network
will have to sell off stations 3MP Melbourne and 3EE (Magic 693) Melbourne.

"Gold-FM" is the new name of Gold-104, and the station's playlist has been
widened from just 60's & 70's golden oldies to 60's, 70's & 80's
favourites.

TT-FM is continuing its format for the last four or so years, of playing
a lot of pop/dance/love songs type music.

==========================================================================
Nothing much else is new on the Melbourne radio scene, so here is a listing
of all the high power stations (2kW+) in Melbourne. Please excuse the lines
that are longer than 80 columns ;-)

This list, along with lists for other Australian cities, can be found in
my WWW page at: http://www.cs.mu.oz.au/~thed

Notes:
ABC - Australian Broadcasting Corporation
- an independent, government-funded organisation
Commercial - fairly obvious
Public Access - community run, subscription sponsored stations
SBS - Special Broadcasting Service
- government funded multicultural service.

AM Stations:

Frequency Call Power Format Type Alternative Name

621 kHz 3RN 50 kW News/info (ABC) Radio National
693 kHz 3EE 5 kW 40's/50's music (Commercial) Magic 693
774 kHz 3LO 50 kW News/talk/sport (ABC)
855 kHz 3CR 2 kW Community radio (Public Access)
927 kHz 3UZ 5 kW Horse racing (Commercial)
1026 kHz 3PB 5 kW Continual News (ABC) News Radio
1116 kHz 3BM 2 kW Italian/BBC (Commercial)
1179 kHz 3RPH 5 kW Print-handc'pd (Public Access)
1224 kHz 3EA 5 kW Ethnic radio (SBS)

1278 kHz 3AW 5 kW News/talk (Commercial)
1377 kHz 3MP 5 kW Easy music (Commercial)
1422 kHz 3XY 2 kW Greek (Commercial)
1503 kHz 3AK 5 kW Easy music (Commercial)
1593 kHz 3RG 2 kW Italian (Commercial) Radio Italia

FM Stations:

92.3 MHz 3ZZZ 10 kW Ethnic Radio (Public Access)
93.1 MHz 3SBS 10 kW Ethnic Radio (SBS)
93.9 MHz 3BAY 35 kW Adult Rock (Commercial) BAY-FM
95.5 MHz 3CAT 35 kW Classic Rock (Commercial) K-ROCK
101.1 MHz 3TTT 35 kW Light Pop (Commercial) TT-FM
101.9 MHz 3FOX 35 kW Pop (Commercial) FOX-FM
102.7 MHz 3RRR 10 kW Offbeat (Public Access)
103.5 MHz 3MBS 10 kW Classical (Public Access)
104.3 MHz 3KKZ 35 kW Contemporary (Commercial) GOLD-FM
105.1 MHz 3MMM 35 kW Rock (Commercial) Triple M
105.9 MHz 3ABC 50 kW Classical (ABC) ABC-FM
106.7 MHz 3PBS 10 kW Alternative (Public Access)
107.5 MHz 3JJJ 35 kW Youth Radio (ABC) Triple J

AccuRatings has released its Spring results. Although still not as widely followed as Arbitron, AccuRatings uses telephone survey in lieu of the diary method employed by Arbitron. They believe this yields more accurate results. Following are the results along with the station rating according to Arbitron in their winter book. (Note-the Aribitron spring book should be released shortly)

1)WGCI (Urban contemporary) 6.7 (2)
1)WGN (talk, Cubs baseball) 6.7 (1)
1)WBBM-FM (top 40) 6.7 (5)
4)WKQX (alternative rock) 5.9 (7)
5)WBBM-AM (news) 5.1 (9)
6)WUSN (country) 4.8 (3)
7)WMAQ (news, Sox and Bulls) 3.6 (8)
8)WLIT (light rock) 3.2 (4)
8)WXRT (progressive rock) 3.2 (15)
8)WEJM-FM & AM (rap) 3.2 (21)
11)WNUA (smooth jazz) 3.1 (11)
11)WJMK (oldies) 3.1 (9)
11)WVAZ) (urban contempory) 3.1 (6)
11)WRCX (rock) 3.1 (13)
15)WOJO-FM (spanish) 2.9 (16)
16) WLS-AM (talk) 2.7(14)
17)WLUP-FM (talk) 2.6 (11)
18)WCKG (classic rock) 2.4 (19)
19)WBEZ (NPR in Chicago; jazz) unrated
20)WTMX (light rock) 1.9 (17)
21)WNIB (classical) 1.5 (20)
21)WPNT (light rock) 1.5 (21)
23)WMBI (religious) unrated
23)WAIT (big band) 1.4 (17)
23)WFMT (classical) 1.4 (26)
23)WYSY (70's) 1.4 (23)
27)WSCR (sports talk) 1.3 (24)
28)WMVP (sports talk) 1.1 (27)
29)WGCI-AM (oldies) 1.0 (25)
30)WLS-FM (talk) 0.9 (30)
30) WJJD (talk) 0.9 (28)
32)WYCA (gospel) unrated
33)WIND (spanish) 0.7 (28)

I was unable to get additional detail on the ratings-a.k.a. morning and afternoon results.

Other news of the past two weeks.....

Doug Sterne, a sales executive in San Francisco at KFOG-FM & KNBR-AM, has been brought in at sports talker WMVP as Vice President and General Manager. Doug has experience with selling time at KNBR which broadcasts the Giants games which will be valuable with the addition of the White Sox and Bulls over the next year.

Paula Fagan, who had been working the traffic and news at various stations, has landed a job as a marketing associate for the Chicago Theatre.

One-on-One Sports Network which is based in Northbrook Illinois, has acquired SportsRadio Network of Las Vegas. That adds 120 affiliates to the network. Although based in the Chicago area, One on One Sports does not have a Chicago outlet.

If you are looking for Allan Stagg, formerly of classic rocker WCKG, he can be found doing voice over and narration work.

Haven't we been down this road before?

Mancow Muller, morning man on rocker WRCX, was frozen alive recently. Mancow claimed the stunt was "to conquer demons" which arrived after he supposedly fell through the ice as a youth in Kansas City. Mancow, who spends an awful lot of time telling the audience how he is a down to earth, truthful guy, unlike others in the industry, conveniently forgot a key fact. Mancow pulled the same exact stunt while in San Francisco. Perhaps he didn't fully exorcise the demons in San Francisco. Also, hope there isn't a time limit needed to scare off those scary feelings; due to crowd control concerns, the stunt had to be shortened. Oops.

# 971. New England Radio Watcher: Up the Coast to Maine

Newsgroup: rec.radio.broadcasting
Date: 1995-07-11 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3tt1fg$bra@vixen.cso.uiuc.edu>
Source record: 30571

A couple of quick notes from a day trip up to Portland, Maine:

*The Portland market has become incredibly duopolized. The biggest group is Saga Communications' "Portland Radio" - news/talk WGAN 560, talk WZAN 970, classic rock WMGX 93.1, and oldies WYNZ 100.9 (licensed to Westbrook). They're all squeezed into the WGAN/WMGX facility near the airport and Maine Mall in South Portland. Also duopolized are WTHT 107.5 Lewiston (hot country), WKZS 99.9 Auburn (hot ac), and the simulcast standards WLAM 870 Gorham/WZOU 1470 Lewiston/ WJTO 730 Bath, all under the "Great Downeast Wireless Talking Machine Company" banner. And WCYI 93.9 Lewiston/WCYY 94.3 Biddeford (simulcast AAA-CHR mix) and WBLM 102.9 are all owned by Fuller-Jeffrey. Major standalone FMs are WCSO 97.9 (ac, co-owned with satellite sports WLPZ 1440 Westbrook), and WPOR-FM 101.9 (country, // AM 1490), as well as WHOM 94.9 (soft ac), licensed to and transmitting from Mt. Washington NH. Not many studio locations left to visit...but a few interesting transmitter sites. WZAN 970 (the onetime WCSH, later WYNZ-AM) transmits from Scarborough, on Elmwood Ave. near Rt. 1 and the access road to I-95/I-295. It's one of the few directional sites I've seen that uses "flagpole" style towers instead of the usual steel lattice towers. And at the base of the towers sits... the studios of non-co-owned WPKM-FM 106.3! I think this dates back to a long-ago 970/106.3 cross-ownership. In any case, 'PKM is live and local commercial classical, one of 3 commercial classical stations in southern Maine. The others are WBQQ 99.3 Kennebunk, "W-Bach," owned by the Tanger family (of WQRS Detroit, WTMI Miami, WFLN Philadelphia, and WBOQ Gloucester MA)...and WAVX 106.9 in Thomaston. WMGX-93.1 transmits from a guyed tower just off I-295 north of downtown Portland. I didn't make it up to the big FM/TV sites north of Portland this time...but one of these days...

*Not on the air: WLAM-FM 106.7 North Windham. This was to have been the second FM in the WKZS/WLAM/WZOU/WJTO group, but then they bought WTHT instead.

*Huh?: WTMM-1380 in Portsmouth NH stopped simulcasting sister FM WCQL-95.3 York Center ME (oldies "Cool 95.3") more than a year ago, and picked up satellite sports from "The Team" instead. But driving back at midnight, trying to tape a WTMM ID, I ended up hearing the FM programming instead, complete with the FM legal. A few minutes later, the oldies abruptly faded back into sports. I suspect someone had punched up the wrong pot on the 1380 board...

*No call change at WCLZ(AM) in Brunswick...despite an application to change to WKOL(AM) a few months back. The station is still WCLZ,

and still simulcasting with (very good) AAA WCLZ-FM 98.9. And the WKOL calls, late of 97.7 FM in Amsterdam NY, have now reappeared at 105.1 in Plattsburgh NY. Wonder if the application was meant to hold the calls for the Plattsburgh station...

*For your listening pleasure...I taped unscoped 45minute segments of WCYY/WCYI and WCLZ...e-mail if you're interested in a trade.

# 972. Pittsburgh Radio Watch

Newsgroup: rec.radio.broadcasting
Date: 1995-07-11 00:00:00 UTC
From: AMCCOY@delphi.com
Message-ID: <3tt1fh$brb@vixen.cso.uiuc.edu>
Source record: 30572

(Copyright, Pittsburgh Post-Gazette. Reprinted here
by permission. Republication prohibited in any medium.)

WWSW-FM/AM vice president/general manager Mike Crusham is leaving the station for a new job in Austin, Texas. He'll be vice president/general manager for three stations in the Austin market: news/talk KLBJ-AM, rock station KLBJ-FM and all-'70s KHHT-FM. The stations are owned and run by Luci Baines Johnson, daughter of former President Lyndon Baines Johnson, and her husband Ian Turpin, and are overseen by Lady Byrd Johnson, the former First Lady. Crusham has been with WWSW for six years.

Jack Bogut will return - temporarily at least - to WSHH-FM. He'll be back as a volunteer for the Make-A-Wish Foundation to work with the station's annual "Light Up A Child's Life" holiday campaign. Bogut was the driving force behind the campaign, which the station has been doing since 1989. For two weeks in December, he'll be back on the air, joining current WSHH morning host Leigh Phillips and news anchor Hank Baughman. As he did while morning host at WSHH, he'll broadcast live from several downtown locations and area malls.

There are several new faces working behind the scenes in local radio. WYEP-FM has a new general manager. Christina Springer, a playwright, performance poet and filmmaker, has worked with the National Women's Music Festival and the independent film company Full Circle Films. She's also co-founder of Slam the Word: Pittsburgh's Multicultural Poetry Forum. Former WYEP general manager Heidi Rinkacs is leaving the station to become a full-time parent.
WBZZ-FM/WZPT-FM have hired a new general sales manager. Ann Marie Bobin. She comes from KMPS AM/FM in Seattle, where she worked with recently appointed WBZZ/WZPT general manager Andrea Martin. Mike Sherry has been promoted national sales manager at WWSW- AM/FM. He was an account executive at the station, and before that worked here at WDSY/WEEP/WXRB and at stations in Florida and Indiana. WRRK-FM has hired a new producer for the Jim Quinn morning show. Rose Tennant, a.k.a on the air as "Tokyo Rose," has worked in radio and music video production, and commercial voiceovers. She was producer for WORD-FM's talk show "Pittsburgh's Talking,"

WDUQ-FM is back to full power, after having its transmiitter hit by several lightning strikes. The reading service for the visually impaired, however, which is carried on the station, is still off the air because of equipment damage from the storm.

The latest AccuRatings are out. The top 10 Pittsburgh stations in the latest survey are: KDKA, WDVE, WBZZ, WAMO, WDSY, WVTY, WWSW, WJAS,

WSHH and WTAE. In the 25- to 54-year-old age group, the top 10 are: WDVE, KDKA, WDSY, WWSW, WVTY, WBZZ, WZPT, WAMO, WRRK and WTAE. The spring Arbitron ratings will be out later this month.

WWCS-AM (540), Canonsburg, recently revamped its lineup and added a few new shows. The biggest change is good news for the loyal local following of the BBC World Service, which has been expanded. Formerly airing during morning drive, it now runs from 5:30 a.m. to 6 p.m. The BBC programing is really worth tuning in. It offers in-depth reporting and perspective on international news, plus a varied lineup of well presented features, profiles, record reviews, fiction readings and more. The expanded BBC programming takes the place of ``Arab Network of America,'' a syndicated Arabic music and information program. New WWCS programs include ``The Hot Tub Radio Party,'' billed as ``alternative talk radio'' and emanating from Phoenix, Ariz. It airs Sundays from 10 p.m. to midnight. Also new: ``Positive Notes,'' hosted by Tom Uwen and devoted to Christian music in a range of genres, which runs Mondays at 7 p.m. ``Italia dal Cuore,'' an Italian language program hosted by David Parolini airs Sundays from 11 a.m. to noon. The increased BBC presence and the addition of an irreverent talk show like ``Hot Tub'' points to an expanded focus beyond the predominantly ethnic programming WWCS has been carrying up to now, although its commitment to that continues.

## 973. SF Bay Area Radio News

Newsgroup: rec.radio.broadcasting
Date: 1995-07-11 00:00:00 UTC
From: donut@crl.com
Message-ID: <3tt1fj$brc@vixen.cso.uiuc.edu>
Source record: 30573

I guess I have been "lackluster" in my duties here lately -- school newspaper, classes, work, and a brief 6-week stint as a TV news assignment editor zapped my time ...

Anyway, things have been _relatively_ quiet here the last couple of months. One format change to report -- KKHI AM 1510 in San Rafael (15 miles north of San Francisco), operated by Mount Wilson FM Broadcasters, went from a classical simulcast of their FM to Jazz programming and the callsign KNOB, ID'ing as "The jazz knob". There has been some promotion of the new format, including local event sponsorhips and bus ads.

Long-time Bay Area talk show host Lee Rodgers, who left the market about two years ago to take mid-mornings at KIRO Seattle, returns to San Francisco tomorrow (Monday, June 10) to do morning drive at all-conservative KSFO-560. Rodgers was previously on co-owned KGO AM 810 in the evenings.

Moving to the other side of the political spectrum, Pacifica Radio's KPFA-FM 94.1 has announced that in order to attract younger listeners, they will drop their evening assortment of talk programming, replacing it with music.

That's all I've heard recently 'round these parts ... a complete list of Bay Area broadcasting is available on my homepage, listed below.

# 974. Radio Ahhhs Loses One

Newsgroup: rec.radio.broadcasting
Date: 1995-07-11 00:00:00 UTC
From: Mail Delivery Subsystem <MAILER-DAEMON@tcf.com>
Message-ID: <3tt1fk$bre@vixen.cso.uiuc.edu>
Source record: 30574

The affiliate list of Radio Ahhhs is one less, with the termination of the network after one year by KIID-am 1400 in San Luis Obispo, CA.

This move, by station owner Guy Hackman, comes on the heels of other format changes and resulting failures...none given time to settle in the oversaturated marketplace.

The "KidRadio" format, as it been known did attract some advertisers and a good number of youngsters/parents/families...but, apparently, not enough.

Prior to joining the network, one of the pioneers of the service, in fact, the 1kw station had experimented with being "Home Shopping Radio" which lasted but a few months and, before that, as KKCB, a satellite-delivered country format.

In its heyday, KKCB was known as "KSLY" and was "the" Top 40 station in the market. Later, it became "KUNA," the markets sole beautiful music outlet.

The demise of Radio Ahhhs on KIID comes at a strange time. With but three weeks left in the spring Arbitron sweep, the station suddenly became KKJL (The Jewel) and went MOR/Adult Standards via Westwood One's AM ONLY format.

The identity comes from a Fresno FM that also is known as "The Jewel" and has the same format.

Ironically, the station also now carries, in mid-season, the San Francisco Giants and CNN News...exactly the same as its 5kw competitor at 1150, KBAI was three years ago. Now, both stations compete head-to-head, with AM Only taking on long established Stardust from ABC/Cap Cities SMN. KBAI does a live morning show with local news, sports, weather, etc. and nostalgia/pop MOR that has been a base for the station since 1978.

KKJL has little signal in the market, yet chose to drop a "niche" format that was underdeveloped and underpromoted to enter the lackluster AM "older demo" fray.

Why?

Not for demographic semantics.

Strictly economics. The "promise" of Westwood One to deliver numbers in the 40+ demo (no matter the signal) and at a cost that is unbeatable.

At least one other station in the market had negotiated a similar deal, but turned it down, cold.

As a result, the kids of the area are now without a radio home to call their own and some parents have been quite vocal about it.

Would there be another candidate for the format here? Possibly, but not likely in the forseeable future.

Will "KKJL," in its "midnight switch" do anything in the soon-to-be-released Arbitron under their new format? Not likely. These numbers will be a reflection of KIID-am, despite what ads reps might say.

Best--

Joe Benson

>to clear this one up for me?

Well, KSFO 560 was carrying the Raiders games last season, before (and
after) Cap Cities/ABC took over the station. But I'm not sure if they
will be the "flagship". I haven't heard or read any rumors down here;
maybe sports-talk KNBR 680 (which is a baseball and basketball flagship)
will take the job. Also, KCBS was the local affiliate for the Raiders
before KSFO was.

>other stations of that type out there?

Sure. I've seen several instances of small AM's that decided to drop
their "commercial" programming and go religious--local preachers took
over as unpaid "air talent" and the station pays the bills strictly by
soliciting donations.

Interesting to contrast this to Kansas City's KCIY, which always says "Smoooth Jazz" (my typo deliberate) and whose billboards now feature the word "Jazz" in big letters (and a J that looks sorta like a saxophone).

It's possible KCIY, "The City," is trying to piggyback on the city's jazz history, though none of its programming is reflective of that. Still, it is an attempt to do something different in this marketplace -- at least it's not "Smoooth Country".

How about Toilet Paper jousting? Get 3 rolls of toilet paper, 3 broom sticks and 3 guys and 3 girls.....then blindfold the guys, put the brooms between their legs and send them off to get a "hole in one!" (couldn't resist!)

Put balloons on 3 guys laps (sitting in chairs) and have ladies sit on their laps to see who can break one first....

Buy a little daytimer which is off the air somewhere and make it run well because you can do good radio
with no significant overhead.

Then, take the cash flow there and your newfound credability and parlay it into a bigger station.

That's what I did. Sort of. It's true that I spend a few years at EF Hutton in corporate finance, but that
was because I tried to buy a station in the mid 1970's and found I wasn't smart enough. So I let Hutton
teach me some business principals they don't teach in journalism school.

My father taught me that this is America and in America, any little boy can grow up to be President. I
figured that I only wanted to own a radio station and that must certainly be easier than getting elected
President. In short, nobody ever told me that I couldn't do it, so I did. You can too.

>15,000 mile trip that went over a month.

Tom,
Un...belieeeeevable!

Alright...you asked for it.... dig this!

Another engineer (Bert) and I were putting on a new AM station. We were both young and we wanted to "show our stuff" (Like you say, the beginnings of disaster)! He was the Chief, I was the assistant.

We had all the equipment, two towers and a building that wasn't done. We bolted all the stuff in the racks out in the manager's 3 car garage at his home, then, when the building was done, we dropped the 5KW Gates BC-5P2 transmitter through the open roof, dropped in the racks (the studios were on the 2nd floor) and hooked it all up. It was a 2 tower directional and we decided to really impress the consulting engineer by having it all ready when he got there for the Field Strength measurements. We got it all tuned up, lines matched, and phases and currents in the array in the ballpark by the time he arrived (Non-radio folks have to understand that the CONSULTING ENGINEER in the Broadcast biz is a BIG GUY , usually from WASHINGTON DC, that knows *everything*, so we were really trying to impress him. He's sort of like a lawyer/engineer who can "practice before the Commission (FCC) and all that stuff)

Now , you have to understand that putting in an AM 2-tower is not a minor task. We had 120 ground radials on each tower, a concrete base, 4 inch strap from the bases to the tuning boxes, 4 inch strap to the building, and about a 50 ft diameter piece of COPPER MESH around the close proximity of each tower. This was all BRAZED together with a hand torch. Keep this point in mind.

We got it all tuned up, and the consultant came in and started making antenna base impedance measurements on each tower. This is part of the application work. "Hmmmm... these are way too high...44 ohms..short tower like this ought to be around 18 ohms...hmmmm". Tell you what, have

the tower crew come back and WELD the sections together."
Keep this point in mind.

THe tower crew came back, welded the sections together, and
the consultant came back with his stuff, measured
again..."Hmmmm...still wrong...I just don't see how...AH..
I bet there's a guy wire shorted to the tower..."

"Whattya mean...shorted...?" said one of the tower guys, they're
connected on purpose!"

"What?!!! , why??"

"Mr Cook told us to do it"...(the manager). Turns out he was
a CBer, and someone told him to "top load" the towers to get
out further!

Well...after removing the connections from the guy wires..
Anyhooo... it worked! He came in, made some measurements, tweeked a
little and basically said "This is good..let's go make the Field
Strength Measurements. So, Bert got a meter, I got a meter and we
were issued two CB radios to talk back on. It was a symetrical
pattern, with 2 nulls. He sent Bert out to a point on the NorthWest
null, and me out to a point on the NorthEast null. If you know
antenna patterns, these should have been very close to the same
number of degrees off the "main bang" as the major lobe is called,
like mirror images.

First he told us, "OK..now I'm going to tune the phases to the exact
operating value by you guys telling me when I have the very least
signal. So just holler GOING UP or GOING down"...

So..he started tweeking, Bert yelled "GOING UP"...I yelled "GOING DOWN".
"WAIT at minute, he yelled, that CAN'T happen! This is a SYMETRICAL
array!" One of you is in the wrong place!"

So, after much fooling around, we went to another point on the same
radial line (same bearing from the antenna) and set up again, figuring
the map was wrong, but wouldn't be wrong twice...Heh Heh...

We tried again... Bert: "GOING UP"... Jim: "GOING DOWN"... !!

Consultant: "OK...everyone back to the building..I have to think!"

We thought, and we discussed different things that could be causing
this, like a resonant water tank, or some such thing, but there
just wasn't anything likely in the area. I gotta take credit for
this one (humbly)..'cause it hit me..."Hey..you don't suppose
one of the towers is in the wrong place?"

"Naw...couldn't possibly...wellllll.. Anyone have a compass?"

Someone ran out and grabbed a Boy Scout compass out of their car...
"Holy...." it's at least 60 DEGREES off!"

Later on, we found out that the same manager who told the tower guys to top load the tower also hired a cheap surveyor, who , if he'd asked around town, he would have found out was a drunk...and the guy had decided, when given the plans of the plot of ground where the antennas were to be layed out, had decided that there was some mistake because they WEREN'T PARALLEL TO THE ROAD! So, he fixed them!

SO...now you remember all the copper mesh, brazing, 4 inch strap and the WELDED towers! Ah..yup...had to move one about 60 feet, put in a new ground system...had a *heck* of a time getting the welded tower sections apart...

YOU THINK THIS IS ALL? Huh....

Now we went out and made the real field intensity measurements somewhat like Tom. Yes, I put a hole in my oil pan driving down a West Virginia "road". (Asphalt, turns to dirt, turns to farmer's field with old bridge over creek, turns to dry creek bed with rocks and boulders). Road??? Yes, we went looking for days for a school that burned down in 1932...(this happened in 1964). But, we basically got them done OK. No horrible adventures like TOm's..

BUT..(ah, you knew there was gonna be one)...

The consultant called me..."Are you sure these numbers are right?"
"Yeah...we even checked the meters against each other".
"WAY too high...I don't get it!"

I'll tell this one simply... the same manager had the tower crew put on the extra section they bring with them for emergencies. The towers were 20 feet too high! AM stations are licensed for certain antenna efficiencies..we were too high...He also put the concrete bases up too high, adding to the length... We didn't learn about this until too late...

THIS GUY KEPT HIS JOB FOR YEARS...! Where's the justice?

The figures "magically" JUST MADE it when I read them from the license application later. No reference was ever made to them being TOO HIGH again! (The consultant had had ENOUGH!!).

-Jim D.

>flip", or if they listed it in their slogan file with Arbitron.

I imagine they've listed KHOT as an on-air slogan. Call letter flips may not be the best thing to rely on. Heaven help the Boston station whose inattentive listener with a diary mistakenly writes down "WMBX". Did he mean WBMX? Or WMJX? Or maybe WMEX? Probably not WZLX, WFNX, or WKOX, but you never know.

Boston also has a WBOS, a WBCS, and a WBCN that can all be mutually confused, and it has WCRB, WHRB and WNRB, not to mention WCLB which is now WKLB, and WCVB(TV).

WBZ has the best calls in town-- nobody's likely to confuse them with anybody.

I can receive a distant FM station but, unfortunately, a local FM
station is only 200kH away and it interferes with the distant station.
If I detune my receiver by 100kh (away from the local station) the
distant station comes in without interference but then my receiver
distorts it.

What I seem to need is a sharp notch-filter for the antenna or a very
selective FM receiver.

Does anyone know where I can get either of these?

I had the pleasure of working with Goddard at KZZP and am delighted to see him land at KNIX. A shame K-Hits didn't keep him; with his heritage in the market, I think he's one of the few air personalities who could have made that format work. BTW, I believe Goddard was on the air at KCBQ when Elvis Presley's death was announced; I seem to recall hearing an aircheck of that moment somewhere.

Actually, 106.1 _is_ WBLI. WGLI _was_ an AM station on 1290 AM licensed
to Babylon. It was bought by the owners of WADO and ultimately turned dark
to protect WADO's signal on 1280.

The station at 102.3 is WBAB, licensed to Babylon, NY.

# 1001. RCA Audio Chanalyst 170-A information wanted

Newsgroup: rec.radio.broadcasting
Date: 1995-07-11 00:00:00 UTC
From: vancleef@bga.com
Message-ID: <3tt1gm$btf@vixen.cso.uiuc.edu>
Source record: 30601

I am posting this to the rec.radio.broadcasting newsgroup because what little information posting to the amateur, audio, and antique radio newsgroups points to this being a piece of equipment that was used in broadcast studios in the 40's.

I acquired on of these recently from a warehouse sale of manufacturer's test equipment, thinking that I was getting a device for trouble-shooting old radios. Turns out it is audio-only.

The box has two chassis. The lower chassis is a four-stage audio amplifier, with "input" and "monitor" jacks, as well as calibrated gain adjustments for each stage. The upper chassis has a built-in VTVM (DC and AF inputs 5-1000 volts, ohms 1 ohm to 1 meg ranges), an audio oscillator that goes up to 10KC, and what appears to be some sort of a low power audio adjustable dummy load. It has an internal speaker and a 6E5 tuning eye indicator as well. I've rung out about half of this thing to develop a schematic, and it is slow going because it is full of odd-ball circuits. One significant puzzle is that the output of the oscillator triggers a 2050 gas tetrode, but I haven't found what the output of that works. It has a couple of modifications indicating that it was in regular use into the early 1950's at least.

The unit has a date stamp of Aug 7, 1944, indicating that it was built while wartime manufacturing restrictions were still in effect. Thus, the original user would have had a priority authorization to purchase a piece of civilian test equipment, indicating that this wasn't built for a consumer service shop. A couple of E-mail responses indicate that it was built for use in maintaining radio station studio equipment.

Is there anyone familiar with this box? I'm also searching for a manual for it (none of the usual sources for ancient test equipment docs have produced one yet), but am particularly curious to find out what its original target market and use was.

Does this ring any bells with anyone? E-mail responses would be most appropriate, to avoid cluttering this newsgroup with a lot of tech talk about obsolete iron.

Over in the Boatanchors group, someone started a thread concerning the military's use of WABC and WLW for FSK/RTTY transmissions during and after WW2. Apparantly both stations were used to send RTTY transmissions simultaneous with normal broadcast operations. This was accomplished by means of varying the stations carrier by a few cps (oops, hps).

Any of you OT's out there know if this is true? Did it happen?

>KIMN-FM" in Denver, my guess would be that they intend to purchase an AM
>in Denver for a simulcast and are doing this as a means of "holding" the
>KIMN calls (?)

Close, close. Actually, Secret used the Sacramento AM to hang on to the
KIMN calls during the "legal instant" when they were being moved from
107.9 in Fort Collins to 100.3 (ex-KMJI) in Denver. Otherwise, there was
the remote but real risk that a competitor in Denver would try filing
for the calls at just the right moment.

It will be interesting to see whether Sacramento returns to the old
KSMJ(AM) calls now.

I think you hit it on the head, for most stations -- Most of radio's success since it re-cast itself in the 1950s has been because of its LOCALISM. I know that when the phones don't ring at WIP in Philly -- because nothing's hot that day that's local -- t
try ANY topic that stimulates the corte -- advice for Hugh Grant, all-time favorite sit-com, desert-island movie -- you name it. It works because it's done locally, and because at the core that particular station isn't "all-sports" -- it's entertainment
talk for 25-54 year-old men.

# 1005. Re: All-sports formats

Many have written >How are all-sports talk radio doing in your market?

Chicago may lead the nation in sports talk stations. Two are full time and two others devote a good chunk of their broadcast day to sports.

As Bill noted, WSCR is the leader of the two full time stations. They do a very good job in supplying interesting discussion of sports. While their ratings are in the low 2 range, it appears they are making pretty good money. Group W (division of Westinghouse) agreed to buy the station from Diamond broadcasting-Diamond will make a big profit on the sale.

By the way, construction of the antenna site which will allow the station to broadcast 24 hours a day has been delayed. Due to the impending sale to Westinghouse, a myriad of additional govenmental regulations must be followed since Westinghouse is a govenment contractor.

WMVP, home of Steve Dahl, has been struggling in the ratings,generally in the low 1's with the exception of Steve and Bruce Wolf. However, the station recently landed both the Bulls and White Sox, so ratings should improve.

WMAQ, current home of the Sox and Bulls, does sports talk at night. Their show is really lame and it will be interesting to see how the loss of the Sox and Bulls affects the station. Also, the owner of MAQ is Westinghouse which will take over SCR once the deal is approved by regulators.

Top rated WGN also spends a significant amount of time on sports. They broadcast the Cubs and the Bears. Their weekend programming is heavy on the sports side.

All in all, sports talk does very well in Chicago. Sports and local politics are our favorite pasttimes.

ANNOUNCEMENT
<a href="http://itre.ncsu.edu/radio/">Shortwave & Radio Catalog</a>
^^^^
NEW Web Address - July 8, 1995!

Shortwave / Radio Hypertext Catalog on the World Wide Web (WWW)
serving the radio enthusiasts since March, 1994

AVAILABLE NOW
ISSUE #27
(5 Pages)

A catalog of hypertext links to FTP, GOPHER, and WWW files and services
for the Shortwave Listener and Radio enthusiast is now on-line. This issue
includes links to broadcaster schedules, digital audio files, graphics,
mediumwave, shortwave, FM, Ham Radio, FCC, and other files associated with
radio.

Ralph Brandi's FAQ material in hypertext form has been upgraded and is NOW
available on this WWW server! In addition, over 470 hypertext links (and still
growing) are listed. These include direct links to Shortwave, AM, and FM
broadcasters, Solar reports and images, Scanner information files, audio files,
ham radio info and much more. All these available with a click of your mouse
via Netscape, SlipKnot, or NCSA's Mosaic (return key for NCSA lynx users).

The URL to put in your hotlist/bookmark file:

## 1007. Talk show hosts wanted

Newsgroup: rec.radio.broadcasting
Date: 1995-07-11 00:00:00 UTC
From: mcircus@mcs.com
Message-ID: <3tt1gu$bto@vixen.cso.uiuc.edu>
Source record: 30607

Information is now being collected for the fourth edition of Talk Shows & Hosts On Radio. This is a comprehensive guide to American talk radio that currently lists over 1500 programs and provides biographical information for many of the hosts. The directory includes syndicated as well as local shows and lists them by geographic location with cross-indexing of host's names and program topics.

Talk Shows and Hosts On Radio is a communications resource used by researchers, talk show devotees, media buyers and public relations firms who need to target specific audiences. The third edition has been published as a 303-page hardcover book and is also available as a WordPerfect 5.1 diskette.

Data in Talk Shows & Hosts On Radio is based on information provided by the hosts. Questionnaires have been mailed to most radio stations known to air talk programs, but if you haven't received a copy you are encouraged to contact the Whitefoord Press at (800) 972-2584. We're requesting information about your show's station, the program' topics and schedule, estimated audience, frequency of guest appearances and phone-in segments, phone numbers and producer's name. We;re also interested in any personal and promotional information you care to provide for use in the biographical section of the book.

For more information about Talk Shows & Hosts On Radio you may contact the editor, Annie Brewer, at Whitefoord Press, 806 Oakwood Blvd., Dearborn, MI 48124, (313) 274-1038, Fax (313) 274-9263 or via e-mail to anniebrewer@delphi.com.

Harder may be a little weird, but it is interesting and I run it late at night. Sales are never a problem. If I replaced my live afternoon show with him live, the result may be more problematical. Not to worry---we are much more conservative than he is when we're local.

But we're local.

consultants--lost of expensive consultants SARCASM MODE OFF

But I run stations in and around Tulsa, OK where I can correlate the last five elections, my incoming talk lines, my office phone and my advertisers' preferences and develop a coherent strategy--which works.

Frankly, the Times-Mirror Institute study of late 1993 seems to reflect Tulsa well. We are a state with a large Democratic registration advantage which routinely votes for conservative Republicans.

The Times-Mirror study said that roughly 2/3 of talk listeners described themselves as "more conservative than liberal" (while roughly the reverse was true about air personalities) and it said that 67% of adult Americans listened to talk once a month or more. It would occur to me that 2/3 of 2/3 is more than 1/3 of 2/3 and it is not my job to swim upstream.

As far as research goes, I have the best kind. When we had Jack Ellery on because of a lapse in Chuck Harder's judgment, he was hooted off my air by listeners and advertisers alike.

Stations in Tulsa who have tried liberal talk have gotten nowhere. We're very profitable.

Yes, I consider myself conservative. Which is why, if liberal talk were where it was at, I'd hire Fred Winston<evil grin> to do mornings as an oldies station. And Bob Sirot would be my choice for afternoon drive. And John (Records) Landecker would get the teenybopper shift. So I wouldn't have to live with putting things on the air I know not to be in tune with what I perceive to be the truth.

Fair enough?

I've seen those towers from I-64 driving in from Huntington WV, and it is indeed rather ominous, like the Martians were invading. WCHS' nighttime power didn't always used to be 5,400 watts, did it?

> The main competitor, WQBE-AM, is also a 5,000 watt daytime signal,
> but they drop to 1,000 watts at night, and since they are physically
> outside of town, the signal doesn't do very well in key locations-- like

> the capitol buildings.

That's the old WKAZ-950, the AM Top 40 giant, isn't it? They always did have a sketchy nighttime signal. WVAF (V-100) knocked them off in a book or two, as I recall.

> As a side note, WCHS(AM) ("Newsradio 58") also owns WCAW

> Carolina.

WCHS owns WCAW now? Are they really calling it "68-CHS?" That must be confusing, especially with the call letters on the OTHER frequency...

Someone told me a funny story once about the WCAW directional array being on land owned by monks or priests or whatever, and WCAW having to run some sort of religious program as a result!

Is WCAW still directional at night? I seem to remember the station using four towers with 250 watts at night, or some other directional monstrosity.

Sorry, but the cast and crew of WNIB's onetime all-night show, "Howlin' At The Moon", won't be able to attend. Mike Rasfeld died about six years ago, Bob Rudnick in in the hospital with both lung and pancreatic cancer, and I'm in Philadelphia. But I'm sure I speak for all of us when I say we wish the Florians the best.

My favorite WNIB moment came when a self-styled "psychic" who hosted a show was interrupted by his car alarm going off. He simply walked out of the studio and out to his car, which was parked a few blocks away, reset the alarm, and came back to the studio and on the air. No records, just dead air for a good ten minutes or so. And that's why they called it The Golden Age of Brokered-Time Radio.

Z-Rock guru Lee Abrams (at ABC/Dallas) says the evolution from a
black-tee-shirt head-banging hard-rock Z-Rock to something that more closely
reflects today's AOR -- that would be modern rock, folks -- is almost complete.
They'll continue to call it "Z-Ro
ck" in off-air references, but your local station may drop the moniker
entirely. Abrams says the whole "turn it up and piss off the neighbors"
mentality has been re-worked into something more 90s. He's got some great
"before/after" examples, if you're in
terested.

# 1014. New FM in NYC area

Newsgroup: rec.radio.broadcasting

90.3 WDFH Ossining, NY , a "grassroots", non-commercial community station, began program tests this week from their Croton Ave studio/ transmitter site.

They will begin formal programming at 8 pm this Saturday, July 15th. The slated format will be progressive/alternative rock.

WDFH is probably the last FM station to be authorized within 35 miles of New York City, as there seem to be no more spots available on the enire FM band for anything other than maybe a translator.

WDFH operates at an assigned power of 200 watts ERP. You can't miss the studio- just look for the two bay Shively antenna with the brown radomes atop the two story office building.

Carmine Iannace

From: mikeradio@aol.com
Message-ID: <3u2hqo$2vm@vixen.cso.uiuc.edu>
Source record: 30505

Reply-To: mikeradio@aol.com (MikeRadio)

Attentiuon Research Directors, PD's and MD's...

At HOT 97 New York, we have begun utilizing a new interactive computerized research system called COMQUEST to do our in house research. After investigating this system thoroughly, it seemed to be something that would be able to do the job better than we were previosuly, at a much reduced cost.

We have had this system in almost 2 months now. It has DRAMATICALLY improved the results of our in house research, much MORE than my previous expectations. The system was created by former consultant Garry Mitchell, who took into account everything, and has been making even more improvements and innovations in the program on a daily basis.

I just wanted to put a message about this system up here, becasue it is rarely I am excited and extremely satisfied with something new like this system.

There are already clients using the system from many major markets alll over the country, and for sure the client list is going to get bigger. The time to get in with this is now.

If you want more infomation about Comquest, email me your call letters, name, address phone and position, and I will pass it on to Garry Mitchell.

If you are from a small market station that maybe doesn't do in house research but would like to, although the budget doesn''t seem to allow it, email me anyway. Besdies being extremely more accurate and efficient, the cost effectiveness of Comquest is enormous.

R&R Online is essentially a BBS for R&R subscribers. The deal is, if you subscribe, you can access "full station reports" and other chart information via modem. They send you a little survey about your equipment, you send it back and they send you the info you'll need to access it. It is not a Web Page or an alternative to the print version. It's more like supplemental information. The one cool feature it offers is custom charts compiled from user-selected stations.

In article <3tnp9j$7pb@vixen.cso.uiuc.edu> VUBS79A@prodigy.com (Drew Durigan) writes:

>Why in the world would a station in SACRAMENTO want the call letters KIMN?
>Since this station is owned by Secret Communications, owners of "The New
>KIMN-FM" in Denver, my guess would be that they intend to purchase an AM
>in Denver for a simulcast and are doing this as a means of "holding" the
>KIMN calls (?)

Hi Drew,

I don't know why they took the KIMN call letters, but thanks for inadvertently pointing out an error in my report - it's the KCTC/KYMX combo that's being swapped to Henry Broadcasting, not KIMN/KSFM. (Guess the little illness I'm still fighting off showed up earlier than I thought. ;)

KIMN (ex-KSMJ) and sister FM 102 are, as you mentioned, owned by Secret Communications.

As Bill, our esteemed (but apparently not curmudgeonly ;) moderator noted, it's quite common for stations in different markets on different bands to share call letters. (ex. KCBS - the AM is in San Francisco, but the FM and TV are both in Los Angeles. Or WONE - the FM is in Akron, the AM is in Dayton.)

## 1023. Satellite Aiming Software

Newsgroup: rec.radio.broadcasting
Date: 1995-07-13 00:00:00 UTC
From: apollo@aros.net
Message-ID: <3u2hqs$2vr@vixen.cso.uiuc.edu>
Source record: 30509
Cross-posted to: rec.radio.broadcasting,rec.video.satellite.tvro,rec.video.satellite.misc

I am looking for some beta testers for some IBM software to aid in aiming a satellite dish...you enter your coordinates of your ground posistion, then you are presented with a list of satellites, pick one, then it will display the azimuth and elevation you need to find that satellite. The list of satellites is a database that you can update, add, delete or edit from. Currently it lists all of the C/KU satellites for North America. You can print this list as well as print the azimuth/elevation info...

if interested, send me some email to apollo@aros.net or if you have FIDONET you can FREQ this file with the MAGIC name of SATFIND or directly with the name SATFIND.ZIP if you have an FTP address I can FTP it to you as well...

thanks all! Chuck Condron Condron Broadcast Engineering

> PRR

The frequency is 88.7, and is shared by WRHV/Poughkeepsie (a satellite of
WMHT-FM/Schenectady) and WFNP/New Paltz (licensed to the State University of
New York College at New Paltz).
WFNP offers rock and jazz music evenings when school is is session; WRHV
offers classical music on the frequency the rest of the time. At least, that
was the way it was about 5 years ago when I worked at WMHT.

# 1025. Sharing Time Big-Time (Long)

Newsgroup: rec.radio.broadcasting
Date: 1995-07-13 00:00:00 UTC
From: forsling@iastate.edu
Message-ID: <3u2hqu$301@vixen.cso.uiuc.edu>
Source record: 30511

Hello folks,

The recent thread on existing share-time operations brought back some memories of some "big-time" time sharing that I used to enjoy in the so-called golden days of radio and shortly thereafter. Some readers of this group might find this stuff interesting, and I haven't seen it posted in a while.

My first experience listening to a big-station share-time setup was back in the late 1940's, and the frequency was 890. The stations? WLS, at that time owned by The Prairie Farmer publishing company was one of them. The other station on 890 was also a 50kw Chicago outlet, WENR, at that time owned by ABC. Both stations carried ABC network programs and Blue Network (formerly the NBC-Blue Network) programs before that network was bought by Edward Noble and the named changed to ABC. The arrangement wasn't unworkable in the days when such stations pretty much rode the network and sold spots in the breaks (and in a few locally-oringinated shows like the WLS Barn Dance), but it became just impossible as the networks declined and the "format" became king. It was, obviously, impossible for a station to develop much of an identity if it shared time on a "rotating" basis, as was the case with WLS/WENR. I believe this arrangement survived into the mid-50's when ABC (WENR) bought The Prairie Farmer Company and its WLS and called the surviving station WLS (and thus one of the great rockers of all time was born).

Anyway, by "rotating," I mean that this was not a simple case of, say, WLS operating on the frequency from (for purposes of example, only), say, 6AM to 6PM with WENR operating from 6PM to the following 6AM. Instead, the system worked more like this:

DAY TIME STATION
Sunday 6AM-6PM WLS
6PM-6AM WENR
Monday 6AM-6PM WLS
6PM-6AM WENR
and so on

There were variations over the years and the owners tried to come up with schedules that made commercial sense.

When I say it worked "more" like this, I mean roughly as depicted. I've long since forgotten the actual rotation. It might have been much more complex than what I've set out above. The idea, of course, was to give both stations an equal crack, over time, at every time period. So much for the first of the 50,000 watt time-sharers we used to

listen to here in Iowa.

Now, some real complexity: The neatest share-time arangement that I recall coming across in the 1940s was that involving WBAP in Fort Worth and WFAA in Dallas--both 50-kilowatters AND both 5-kilowatters. Here's how it worked: There were two frequencies involved--570 and 820. There were two networks involved--ABC and NBC. EACH station switched between the two frequencies, but the network affiliations stayed with the frequencies. Thus, for example, at a time when WBAP operated on 820 with 50K and NBC programs, WFAA was operating on 570 with 5K---and vice versa. I don't recall if all of this involved four transmitters and two sites or two transmitters at one site.

Like the WENR/WLS arrangement, this one worked pretty well until the steam went out of network radio. It was a little slicker than the Chicago setup, because each station was on the air (but not on the same frequency) all the time. It was fun to listen to the 820 frequency at 10PM when an announcer would say, "This is 820, WFAA, Dallas"....followed immediately by the ringing of a cow bell... and another announcer
who would say, "Now, WBAP, Fort Worth." It didn't take much to thrill me in those days :-)

The WBAP/WFAA setup lasted to the mid-1960's when the changing nature radio made it simply impossible to continue. I didn't appreciate the true horrow of the arrangement until I found myself working as a radio time buyer for the Leo Burnett Company in Chicago in the mid-60's. It was nearly impossible to develop a schedule that made sense for the client. It was MUCH more complex than the WENR/WLS situation. Typically---(but not necessarily accurately)

DAY TIME FREQUENCY
820 (NBC) 570 (ABC)

MON 6-9 AM WBAP WFAA
9-12 WFAA WBAP
12-6 PM WBAP WFAA
6-12 WFAA WBAP
12-6 AM WBAP WFAA

TUES 6-9 AM WFAA WBAP
9-12 WBAP WFAA
12-6 PM WFAA WBAP

and on and on and on through the week....

Pretty tough to sell time when the personalities in a time period were on *every other* day and the entire station identity changed every few hours (as it did as network programs became a minor part of the schedule).

I believe the parties gave up on the arrangement in the late 1960's.
WBAP became the fulltime occupant of 820 where it is to this day. WFAA
became the fulltime occupant at 570. 'BAP keeps cranking along, but
I don't know what's become of WFAA, and I'm too lazy to check.

Lordy, just remembering the look of the WBAP and WFAA listings in
SRDS back in the mid-60's makes me kind of sick.

I hope this has be of interest to somebody.

Cheers.

Reply-To: vdavis@netins.net

For those of you who might be interested, SMARTS has a new demo line. We just set it up on Friday. It's a voice mail system that has a demonstration of the SMART-Caster recorded into it. It's the same demo I showed to the ABC affiliates in Dallas. I recorded and edited all of the stuff on an AKAI digital editor. And for those of you who are wondering who I am, I am Val Davis. I do system design, installation and sales for SMARTS. I am also the voice for ABC/SMN's "Classic Rock Format" and it is my voice on the recording.

One of the items on the demo is a very cool device called the Smart-Touch. It allows you to control your station from a touch tone phone and it is alot more than a DTMF device because you not only can start spots, but you can stop them as well. You can play intros and outros, you can load stop-sets, and you can choose whether your monitoring off-air audio or satellite audio. It lets the jock run the remote or sports broadcast without anyone being back at the station. You can even run your music off hard drive from a remote.

Info on the SONIC FAX is there as well.

Call 1-800-747-6278, ext. 700. Press 1 to hear the audio demo, or 2 to hear technical descriptions of the different systems. The President, John Schadd recorded the technical descriptions.

If you like my voice and would like me to do some production for you, let me know. Even though I am doing national work, I am very affordable. Hope to hear from you soon. If you want to talk to me call 800-213-3350

Thanks

Val Davis

# 1028. Re: Boston Radio Watch/Smooth FM

Newsgroup: rec.radio.broadcasting

Apparently there was some major tensions between Broadcast Architecture the owners of the name "Smooth Jazz" and SW Networks over SW's choice of "Smooth FM". Broadcast Architecture felt that was just a little too close and squawked, but as far as I know no action was actually taken. This might have a littlke to dso with the SW folks stepping very carefully around the J word.

In article <3te274$hnb@vixen.cso.uiuc.edu> Michael Shoshani,
shoshani@wwa.com writes:
>Steve Dahl and Garry Meier were on WLS AM. They left the station when it
>went all talk some years back, which was LONG before there was a WLS-FM.
>They went to WLUP-AM, then were later switched to WLUP-FM when Howard
>Stern began his short-lived stint on the AM station.

Steve & Garry were indeed on WLS-FM. After they were dumped from the
Loop, they moved to WLS-FM. (I believe WLS-FM had recently changed back
to those call letters after a short stint as WRCK, or something like
that. Before that it was WDAI, where Steve started in Chicago.)
Management at WLS later decided to switch Steve & Garry to the AM side, a
move that infuriated Steve & Garry; they took some time off in protest, a
couple of weeks, I think, but eventually agreed to move to WLS-AM, where
they kicked butt in the afternoons until Larry Lujack decided to take
their shift from them, and the management went along with it. (Nice
decision, guys.)

New job, new address... watch this space...

# 1034. WNEW New York City alternative format brief report

Newsgroup: rec.radio.broadcasting
Date: 1995-07-13 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <3u2hr6$30e@vixen.cso.uiuc.edu>
Source record: 30520

As everyone has heard by now, WNEW has modified its sound. (And competitor K-Rock is harping on it, now claiming to be the "only" classic rocker in town). More Modern rock, and other new stuff. Well, I'm a modern rock fan, so I feel that WNEW is now a listenable choice on the NY dial. Along with WDRE (their signal seems weaker lately), and Z100, and for a change of pace, oldies outlet WCBS-FM. Oh, yeah, there's also "X107" in Westchester County.
WDRE is now an "Underground" network station (flagship), and has been playing more obscure stuff lately. But that just reflects my own tastes in music, nothing more. Guess they're feeling more competition lately from about 4 other stations now.

As an aside, 22 years ago, I was a member of a campus "carrier current" AM radio station, "WCPR" Hoboken, at 740KHz. Just below WABC. Anyway, two big rock formats were Top 40 (ala WABC) and "progressive" (WNEW-FM). And thus there existed two groupings of station members, the Top 40 format guys, and the "progressive" guys, whose favorite station was WNEW-FM. I ewas then a Top 40 person, now it seems funny that I am now listening to the "other side's" radio station, WNEW. I imagine that (if WCPR or a decendant still exists at Steven's Tech) the current menbers have no idea how much the Top 40 and progressive guys hated each other.

# 1035. Re: WNIB's 40th Anni

That sounds like a lot of fun. I'm from
COnnecticut and grew up with the old WPOP ("the Music
Revolution"). I hope you'll make some of the sounds of the
station available to the rest of us.
BTW, is my memory correct in saying the station
changed to a news format in 1973? What is WPOP doing now?
Last I remember, Tom Scott was doing midday.

# 1038. Harrisburg, PA Update 7/12/95

Newsgroup: rec.radio.broadcasting
Date: 1995-07-13 00:00:00 UTC
From: halem@access1.digex.net
Message-ID: <3u2hpk$2u6@vixen.cso.uiuc.edu>
Source record: 30614

Before I start, I special thanks to Dave Ratcliffe (dave@frackit.com) and James Linn (jgl231@epix.net) for E-mailing me in response to my requests for information in Harrisburg, PA since I couldn't get up there to listen until today. Their comments are integrated into the text below:

WWKL (99.3 FM): The old format and staff from Kool 94.9 has been moved over to 99.3 FM. They are using "Kool 99.3 FM. Harrisburg's Oldies Station and IDing as WWKL Harrisburg. There are some neat billboards around Harrisburg that say "Harrisburg's Home for Oldies is now at 99.3 FM" and include the Kool logo.

WYMJ (94.9 FM): The calls of the old 99.3 FM have been moved to the 94.9 frequency. They are calling themselves "Magic 94.9 The Most Music and Best Variety" and are IDing themselves as WYMJ Harrisburg. Some of the old staff from Mix 99.3 FM has made its was to Magic 94.9. The guy who board oped Don and Mike is now doing mornings, for instance. The format of the new station is basically Adult Contemporary. They have mixed in a couple of upbeat tunes, but its mostly the same light rock, listen at work stuff. Harrisburg didn't have a station of its own that played this type of music. But with Warm 103 (WARM) and The Rose (WROZ) which play varing degress of AC and have 50 kW signals that get into Harrisburg well, the new 94.9 format is nothing new.

WQXA (105.7 FM): The format change to alternative seems to have taken hold. They play the usual hit Alternative stuff (no of which I know or care about). The jocks are the same ametur types that they had before. The slogan is "The new rock Alternative, 105-7 The Edge." This is a format that is needed in this area as there wasn't a dedicated Alternative station in Central PA. I still think Wink 104 (Top 40-WNNK) will continue to kill everyone in Central PA (Ratings wise I mean). Question: Is the "Ugly DJ" still on in the AM at this station?

WRVV (97.3 FM): The River (AOR/Classic Rock/AAA) is now on-line. You can E-mail them at 'wrvv@aol.com'. They say they have gotten alot of E-mail and read it all. I intend to test that in the near future.

That's it for now. Comments are always welcome.

-Mike

From: jimgrey@iquest.net
Message-ID: <3u2hpl$2u8@vixen.cso.uiuc.edu>
Source record: 30615

===Chick McGee returns to WFBQ (Q95): Chick McGee returned to Q95's morning "Bob & Tom Show" on Tuesday after a six-month stint as a morning show co-host at KGB-FM in San Diego. McGee, who says he "quit slash was fired" from KGB, is "here for the rest of my life, hopefully. I'm bored, I'm broke, and I'm back." McGee resumes sportscasting duties with the Bob & Tom Show. Dave Gunn ("Gunner"), who had been doing sports, moves to concert and entertainment reporting for the Bob & Tom Show. Jay Baker, who assumed McGee's midday slot on WFBQ, continues in that role, as well as in his role as "Dick Nixon" on the Bob & Tom Show.
In other Bob & Tom Show happenings, WFBQ Program Director Marty Bender recently told NUVO newsweekly that the morning program is now being broadcast in Fresno, California. Bob & Tom announced mentioned during their program this morning that more affiliates will join the network soon. Stations in South Bend, Fort Wayne, and Evansville currently air the Bob & Tom Show.

===Indianapolis Public School Superintendent On The Air: Esperanza Zendejas, the new Superintendent of the Indianapolis Public Schools, is hitting the airwaves in an effort to improve the bad image of the IPS. Zendejas appears at 6:20 and 6:40 a.m. every Thursday on the WTHR (Channel 13) morning news program, as well as at 4 p.m. Mondays on a call-in show on WICR-FM (88.7), and at 7:30 a.m. the last Wednesday of each month on WHHH-FM (96.3).

===Radio Coverage of Indiana Black Expo: Radio stations WHHH-FM (96.3), WTLC-FM (105.7), and WTLC-AM (1310) will carry several hours of live coverage from the Indiana Black Expo, July 27-30. WHHH plans 30 hours of coverage, according to Amos Brown, director of strategic research for WHHH's parent, Hoosier Radio and TV. The WTLC stations plan "substantial" coverage, according to Operations Manager John Emerson, including originating morning shows from the Expo.

# 1040. New England Radio Watcher: Simon Geller, RIP

Newsgroup: rec.radio.broadcasting
Date: 1995-07-13 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3u2hpl$2u9@vixen.cso.uiuc.edu>
Source record: 30616

*One of the most colorful characters in New England radio history died Tuesday night at his brother's home in suburban Washington. Simon Geller was 75 years old. He was the entire staff of WVCA(FM) in Gloucester, Mass. from the station's sign-on in 1964 until he sold it in 1988. Geller ran WVCA as his own personal classical-music outlet. It signed on when he woke up, signed off when he went to bed, and sometimes went off the air for an hour or two midday so he could get lunch, run errands, or go to the doctor for his diabetes.

Geller survived a 1960s license challenge, demonstrating to the FCC's satisfaction that he was serving the community needs of Gloucester and Cape Ann (a rocky peninsula some 30 miles north of Boston). By the late 80s, Geller was quite ill, and he realized that he faced two choices -- sell while he was able to decide who the buyer would be, or wait until he was too ill to decide and run the risk that the new buyer would program something other than classical. He was also running out of money -- pleas for listener donations, read in Geller's inimitable croaky voice, were a frequent part of WVCA's final years.

By 1988, he had his buyer. Douglas Tanger is part of the family that owns classical outlets WQRS Detroit, WTMI Miami, and WFLN Philadelphia. The Tangers also owned WHUE AM-FM Boston for a time. Doug Tanger promised Geller that he would keep 104.9 classical, and he has.

After Geller sold, the station was renamed WBOQ, or "W-BACH." It went stereo for the first time, and gained regular program hosts and commercials. Studios moved from Gloucester to Beverly, some 10 miles closer in to Boston.

Geller meanwhile vanished from New England, taking his million-plus dollars, and becoming the source of countless rumors. Some of us heard he had died a few years ago, others that he had moved to Las Vegas and gambled away most of the sale proceeds. Eerily enough, I was talking about Geller just last night at a taping of WJIB's "Let's Talk About Radio" show, and none of us was quite sure if he was alive or dead.

I guess now we know...and somehow New England broadcasting will be a little less colorful now. In this era of multi-station conglomerates, it's nice to remember that for a little while, one crotchety old guy in a little apartment by the sea had a chance to be a broadcaster himself. Simon Geller will be missed.

*Other items, briefly: The Globe mentioned the Red Sox' Spanish-language radio network yesterday, and with its usual reputation for accuracy, offered the following list:

WROL 950 Boston (flagship)
WCRN 830 Worcester (new station this year)
WACE 730 Springfield (really Chicopee...but the station itself often IDs incorrectly)
WRIB 1220 Providence
WXCT 1220 "New Haven" (really Hamden)

Those were all correct...but the list also included:

WCCM 880 Lawrence (uh, try 800, folks!)
WLVP 1140 Hartford

Huh? There is no such beast...the closest calls were the former WLVH on 1230 in Manchester, CT, and the closest frequencies are 1120, WPRX Bristol (which IS in Spanish) and 1150, WCNX Middletown. The Globe's usual record of accuracy and attention to detail continues, I'm afraid.

WNEW-FM adjusts format.....

Big news in the Big Apple--WNEW-FM moves into the Modern Rock/Alternative field. Now known as 'New York's New Rock Alternative', they keep the same air staff, just adjusting the music for an Alternative/Mordern Rock slant. This comes on the heels of Z-100 moving fully into Modern Rock and shedding the last of it's CHR artist base. NEW-FM's move comes at a time when the station is floundering in the ratings. K-Rock with Stern and Classic Rock has blown them away in the ratings, and stolen some of WNEW-FM's talent along the way. This could either be an effort to attract a younger audience, or completely destroy the heritage station (IMHO). Also, rumors run rampant Q-104 will move into the Modern Rock/Alternative format and leave the Pure Rock/Heavy Metal venue.

ARB Spring books come out Friday...

Lisa Maria (formerly Lisa Silwa of WABC's Curtis & Lisa Silwa show) has had her syndicated TV talk show pulled even before it's debut. Tribune Broadcasting wanted more of the same TV Talk show/tabloid garbage, LM wanted more newsy-topical talk like her radio show, heard weekly on Hot 97.

CBS-FM re-ran Wolfman Jack's Radio Great Reunion show last Friday night as a tribute to the Brooklyn born personality. BTW--in a newspaper article I read, Cousin Brucie made some nice comments about Wolf--I guess that may put to rest the 'feud' between them.

Till next time....

want
>to clear this one up for me?

Interest is high at several Bay Area stations -

KNBR 680am - is "VERY" interested. The station which also carries Warriors and Giants games.

KFRC 610am/99.7fm - PD Brain Thomas was quoted in the SF Examiner "This could be the vehicle to take KFRC(AM) all sports." KFRC(AM) currently carries A's and Sharks games. Thomas also stated," We could simulcast games and give them the AM/FM punch nobody else can duplicate."

KNEW 910am - The station in the past has carried both the A's and the Sharks. Is interested in the Raiders.

KSFO 560am - Last year LA Raiders games were carried in the Bay Area by the conservative talk station. Station officials have not commented on their interest to be the flagship station for the Oakland Raiders. It's sister station, KGO 810am, is the flagship for the SF 49ers.

KCBS 740am - The station dropped the LA Raiders (KSFO picked up the rights last season) to "focus" on the station's all-news format. The station's position is "It's no longer interested in play-by-play games coverage." But the station will of course report on the games.

>yet?

Scottie,

To send digitized audio via modem you need an encoder (like Cd 1000
from CCS) than a sound card. The problem is, that available encoders
produce digital stream of 56kbps minimum. So you need a modem with
56000 bps to send a digitized voice live. As I know, there is no such
a devices.

Rich,

I'll point out that there are very, very few of those that are married whose spouse does not also work. Even those who are not, have condo's or houses and often we owe more on them than they can now be sold for.

If the other station that was 'taken over' was the only other one in town, then there is now no place else to go in that market. Even if there are twenty stations in town, it is very likely that many of them are under some form of joint ownership. This means that there is a glutted market of folks looking for jobs in Radio.

Perhaps it's time that we thought over our preconceptions about the trade unions and Broadcasting Talent?

Fred,

Let's look at "invested capital" just a bit.

First, for any station, it is not the cash that was paid for the station, it is the repayment of the loan that provided that cash and the interest rate that was aggreed to as part of the deal.

Second, there is the price that was paid for the station. Back when there was still a Rule in place that required that a Station be held for a minimum number of years before it could again be sold, the price of a radio station seemed to mostly follow generally accepted business rules of Valuation and the general rate of inflation. With the demise of that Rule, we entered into a 'Crazy' world where the price that folks are (or were) willing to pay made no sense whatsoever and that was concurent with some of the highest interest rates in the last 80 years.

For each dollar received from the sale of time or other services, a very major fraction is going for the servicing of these loans.

The combining of stations within a single market serves to reduce costs. First, the use of a common managment orgainzation; second, the combining of studio facilites; third, a common techinal staff; fourth, a common sales and billing staff.

This is all a "Work-Around" to the funimental that too much money at far too high an interest rate was paid for the property.

I submit that those that entered into such 'deals' did so with their eyes open and that these results were foreseeable. When I error, I am told that I should bear the burden of my error. I see no reason for this to not be the case for these persons.

: More tales from the hams on the Boatanchors email list...

: "Hey..you don't suppose one of the towers is in the wrong place?"

I worked for a two tower AM DA that had an extra pier about 75 ft. to the east of one of the towers. Seems that the surveyor lined the towers up to magnetic north instead of true north, an error of about 18 degrees.

The error wasn't discovered until the towers were up and the RF proof was underway. The tower contractor wasn't too keen about tearing down and putting a 200 ft. tower back up, so he came up with a different plan.

He jacked up the errant tower and supported it jig made out of a couple of 8x12 timbers. Next he drove his pickup truck underneath and lowered the tower onto the bed of the truck.

He stationed a couple of people at each of the guy wire points, and had them let out/take in the guys as he slowly DROVE THE TOWER from one base to the other. At the second pier he reversed the process, jacking up the tower onto the wooden jig, driving the truck out from underneath and coaxing the tower base onto the new pier.

Believe it or not, the tower is stil standing.

I know of two odd station ID funnies. One is KKSN Portland, they called themselves "KISN" (something that they once had this call, lost it, and some other station elsewhere grabbed it). They said the real ID buried in commercials at :55.

WHTZ Newark is another station that buries the legal ID, around :45 (I thought that stations had plus or minus 5 minutes from the top of the hour to ID). Newark NJ is a rathole, so I can see them not wanting to brag about it. They usually say something like Z100 New York for positioners?.

Just thought of another, 91X near San Diego. It's really a Mexican station XETRA, and around :45 they play a short ID in (I guess) Spanish, "blah blah Exxa Etra Tray, Baha Mexico". I can see them not wanting to emphasize that they broadcast from a country where you can't drink the water. :-)

> circle, WHOT(FM) - Hot FM 101 in Youngstown, OH.)

Totally trivial here, but just FYI.. WHTO became "The New Hot-FM"
sometime around December '94 (I *think*), and although they don't plug
themselves as WHOT anymore, they weakly hide their call letters. :10 of
the hour, their announcer (same guy who does WHTZ in NYC - does ANYBODY
know his name or contact?!?) comes on and says something like "Technically,
we're known as WHTO, Muncy/Williamsport. But all our friends call us
103.9, Hot-FM."

I always wondered why they do that myself...I doubt any listener picks
their station of choice by call letters! :)

That's a tough problem. Can you use a directional antenna?

If the station you want is on, say, 99.9, and the interfering local signal is on 100.1, you're really talking about suppressing 100.025 to 100.175 while leaving 99.975 to 99.825 unaffected. Only 50 kHz separates the top of the desired frequency range from the bottom of the undesired range. You're talking about a _really_ sharp filter.

If the group delay across the desired range isn't constant, you'll get distortion.

There are people who make custom cavity filters for FM repeaters; you might get in touch with one of them. But if you can use a directional antenna, it's likely to be a much less expensive solution.

>Geoff Rainville.
>
>
>Thanks!
>

First, let me start out by saying the RCA BTA 5H is one of my favorite
transmitters, and the three I have come in contact with have all had
the
thyratron tubes removed, I understand they were short lived and quite
trouble prone. I have not seen a solid state plug in replacement.

What had been done in all three cases was solid state rectifier stacks
replaced the thyratrons, and a motorized autotransformer was installed
in
the primary of the plate transformer. In all of the rigs this was
done quite neatly and worked well.

If you'd like more information about the conversion I'll see what I can
dig
up, in all cases it wasn't documented all that well, which leads me to
believe the conversion was quite simple to perform.

Reply-To: mikeradio@aol.com (MikeRadio)

HOT 97 WQHT has an immediate opening for a part-time request line operator. Hours are during the day and vary different days of the week.

This is an entry level position, however those with prior experience at a radio station will be looked at with preference.

People with a real desire to enter the radio business are encourage to apply. We are not looking for "groupies".

For information on where to fax your resume, email reply me at MikeRadio@aol.com.

HOT 97 WQHT is an Equal Opportunity Employer.

Reply-To: edmajic@aol.com (Ed Majic)

I'm acting as a clearing house for a friend in the Southeast United States. He's quietly looking for a news director. Someone who writes with style, relates to the target and understands the importance of finding ways to connect national stories to the local level. You know, someone who can explain how the prime rate going down .001 can affect the listener.

Tapes/resumes, please no-calls...cause I couldn't tell ya anything anyway (other than it's an equal employment opportunity...minorities are encouraged to apply...and all the other legal stuff lawyers make you write)!

The value of database marketing can't be beat, for the Morning Show and the station in general. You know they're listeners, you know (based on their calls) when they listen and therefore can push them into other dayparts, and once they're in the database, they're more than just abstract numbers for your clients to look at!

Plus, you can slip in contests just for the loyal listeners in your database. You can select only those who listen in the morning, at night, in certain areas of town, at work...the possibilities are endless.

The one thing that database marketing can't do is reach people who aren't listening yet. Be sure your proposals address that and include some marketing that goes outside the studio: billboards, papers, etc. Don't overlook the cheap stuff: flyers at local events, free press for stunts/events, any way to sneak your face in front of new people. (We sent a congratulatory letter and staff photo to a local record store for their grand opening. It was framed and hung in the store for a year!)

Good luck with the brass. I hate those meetings!

Marty point out the following:

>what I've read, KMPC's mission is to chip away at top talker KFI

In the latest trends, KFI is CLEARLY the winner, especially in the afternoon race from 3 to 7. KFI's John and Ken are in at 4.0, with Westwood One Tom Leykis on KMPC, and KABC far, far behind.

>it is San Diego's KOGO (which reaches the SouthBay as well
>as any LA station) that is stealing from KFI

I'm amazed how many calls from Orange County, LA County, and Santa Barbara are on San Diego's KOGO, KFMB, and KSDO. Proof that while KFI is strong, is the overall picture needing a fine tune?

>From what I have heard, OJ is pumping up KOGO's mid-day ratings.

True. Especially with the trial in the last phase, it'll really move up. KNX [CBS O&O 1070] is taking advantage of this too. Radio w/pictures [and Tribune owned] KTLA is offering the same coverage, and on other stations via satnet. [So who profits from the trial? There are two people who AREN'T here wish they could!]

As much as I liked KOGO when it sprang forth and caused a needed re-vamp into the stale talk of San Diego, when the O.J. franchise is over, so will their ratings. Imus, Liddy, North, Bell and Fredinburg can't carry a station that has only one local live show during the week.

>Does KFI offer a Sunday hour of Sinatra?
No, but KFMB [760 5/50kw DA-2] does offer big band music on Sunday night. In my view, KFMB is a FULL SERVICE station. I wouldn't have said that last year.

I believe the call letters were WYTZ as the station was known as Z-95.
LS-FM was the successor to YTZ after Steve and Gary returned to WLUP-FM.
Steve and Gary were on LS-FM right after their termination from WLUP-FM.

This was done during the WLS-FM years. And to a previous poster WLS-FM was the correct call letters from the time that WRCK-FM ended until they moved S&G to the AM band and changed formats to that Z-95 (WYTZ if I remember correctly). Historically the ABC outlet on the FM has been on a high turnover rate. WDAI, WRCK, WLS-FM, WYTZ, WLS-FM all since 1980! Simulcasting is not a new thing there either. Larry Lujack was simulcasted on WLS-AM and WRCK-FM as was Brant Miller.

The S&G Network show was aired in Chicago on a Sunday night, and it was not quite what Steve expected. Again, too much interference from the network suits.

>energy in the message it's sending, and the people sending it. I

There's another factor here that you overlooked, and that's the fickleness of the audience. Sometimes they just get sick of a certain format. You'll notice that usually when CHR is hot, AOR gets dull and vice versa. A few years ago both CHR and AOR became boring at the same time and country came into the spotlight. I think the novelty has worn off talk, and people are becoming bored with it and moving on. For too many years it seemed that every AM, no matter how badly run or how crappy the signal was doing talk, and, frankly the audience got overdosed. Yeah, the cookie cutter syndrome contributed, but that was more of a symptom than a cause. The cycle will come around eventually.

Yea, I guess Tom Petty and the Beatles are alternative too. :) I like alternative music, but I
think WDRE does a better job of presenting it. What *used* to be nice about WNEW was that they
would mix up the old and new stuff. Now it sounds like they've *drastically* reduced their playlist. I like Dave Matthews as much as the next guy, but I like some Led Zeppelin along with
it :)

# 1083. ADMINISTRIVIA: Posting Guidelines for this forum

Newsgroup: rec.radio.broadcasting
Date: 1995-07-14 00:00:00 UTC
From: EDITOR@airwaves.com
Message-ID: <3u5t8h$kk1@vixen.cso.uiuc.edu>
Source record: 30459

It has become time for me to set out the basic guidelines for posting
to this newsgroup, and some basic explanations of what the group is
for, and about.

Newsgroup rec.radio.broadcasting (rrb), and email digest
AIRWAVES RADIO JOURNAL (ARJ) are designed to provide a public forum
for the dissemination of information and conversation pertaining to
radio broadcasting. By professional-level, we mean discussions of
matters of interest to radio broadcast professionals and those with a strong
and serious interest in radio broadcasting. We do not limit
participation to broadcast professionals.

In order to keep the forum from erupting into flame-wars and to keep
it on topic, rrb and ARJ are *moderated* forums. This means that all
posts must be approved prior to publishing. This document is designed to
give readers a feel for what is acceptable to publish here but is not
designed to be an all-inclusive charter.

In order to be accepted for inclusion in rrb/ARJ, a post must have the
following minimal attributes.....

1) All posts must have a valid name attached to them in some way.
This means one of the following...
a) A *real name* (your actual name) This is preferred.
b) Your *on-air name* (you must include the station/network at
which you use that name)
If your Internet host doesn't include a real-name as part of the"
From: line, then you should add it to the end of your post.
If you are posting sensitive information, and don't want your
name used, let me know and I'll try to cover for you.

2) All posts must have a valid 'SUBJECT' line.
This means that the subject line must accurately reflect the
content of the post. As a thread drifts from the original
focus, the subject line should be changed to reflect that shift.
Posts without a Subject: line or ones which use a bogus
subject may not be posted.

3) All posts must pertain to the charter of the group, *RADIO* broadcasting.
Occasionally a post about TV will be OK'd if it appears to
have a broad interest to radio people. However, this is considered an
exception and is not encouraged.

4) All posts must have a valid return address. Posters whose email
bounces may be excluded from the group to help curb possible
forgeries.

5) All posts must be submitted as "ascii-text".
Binaries, MIME and other attachments are not postable to netnews.

6) All posts must be formatted to an absolute maximum of 78 columns.
The standard for a text-terminal is 80 columns. We specify 78
to allow for quoting in followups. Failure to do this will result in
"line damage" which is the uneven wrapping of lines that are too long.

7) Quoting of previous article text should be kept to a minimum and
*never* exceed 49% of the entire article. Never quote the signature
files from previous posts. Only use the bare minimum needed to make
your points. If replying via the Digest, "please" never quote the
entire (or substantial portion of) the digest.

8) Please distinguish between the 'followup' and 'reply' functions of
your newsreader. Followup sends your response to the group, reply
sends it to the poster via email. When replying to a personal request
for information which is of limited or no real interest to the entire
group, please email to the poster. There is no purpose served by
posting replies to very personal requests to the entire globe.
However, if the requested information is of potential general
interest, then please do post.

9) When posting Help Wanted or Positions Wanted, please include a Full
*REAL* name, Company name, postal address, FAX and/or voice phone and
(if applicable) email address.

10) When asking for, or offering, information about a local station or
personality, always give a little background. Remember most people
are not familiar with your market. If you use a station's slogan,
always include the calls and city too.

11) Commercial postings are a delicate issue. Some would like to see
none of it, others seem to take the tack that mild commercial posts
are OK provided they are not too 'in your face' and are part of the
flow of conversation. The moderator makes all final judgements on
acceptability of commercially-motivated posts. If you are in any way
connected with the company you are posting about, you *must* disclose
that affiliation even if you are not an official spokesperson.
Avoid blatant commercials. Make your points in conversation. Never
overtly bash a competitor's product. Be nice, it will be to your
ultimate benefit.

12) Remember that you, the poster, bear all responsibility (if any)
for copyright, libel, trademark and other matters when posting to the
Internet (not just to this group). Please try your best to be
accurate in your posts. If you post your opinion, make sure it is
cabled as such. Please try to obtain permission when reprinting from
copyrighted sources. Always give attribution of your sources when
available. Summarize when possible to avoid potential copyright
issues. So far copyrights have not become a problem on the Internet,
but as the net grows, it may become more of an issue.

13) Flames are not permitted on this forum. A flame is defined as "personal insult or ridicule". It is perfect;y fine to argue the points or opinions raised by a poster, but not to personally insult the poster. In other words it is acceptible to say... "Your stated opinion is stupid..." NOT "You are stupid for having that opinion..." It is fine to articluate and argue points of view, but make sure you counter it with another point-of-view and not just hit people over the head. Calling of names is also considered a flame. We have conversations here, not shouting matches.

Also avoid posting...

* Known false or misleading information.
* Items that you know are a violation of copyright.
* Overtly profane posts (profanity is not forbidden, just use discretion).
* Loooong signature files. 4 to 6 lines is a good soft-limit.

Thanks for reading. Hopefully this will clear up some of the misunderstandings about posting to rec.radio.broadcasting. For a more inclusive charter of this group, send email to rrb-charter@airwaves.com .

From: EDITOR@airwaves.com
Message-ID: <3u5ik1$6on@vixen.cso.uiuc.edu>
Source record: 30460

I would like to hear from all country radio stations who have web pages.

Please write to me immediately and give me your URL to your page.
Also, if you would, tell me a little about how you came to have
the page...

X) Was it done internally or did you contract with a
service provider to do the programming.
X) How much did it cost you to create?
X) How much does it cost to maintain?
X) How valuable has this been to your station both in
visibility and image, listener participation and
(if at all) bottom-line/revenue etc.
X) Overall are you happy with your web page?

You need not answer any of the above questions to participate, but I
DO need your URL so I can visit your page.

Please reply at once.

!!!! Country Stations only, please. !!!!!

## 1085. Help us & get a free t-shirt - again!

Newsgroup: rec.radio.broadcasting
Date: 1995-07-14 00:00:00 UTC
From: nuzum.5@osu.edu
Message-ID: <199507141507.LAA27275@bottom.magnus.acs.ohio-state.edu>
Source record: 30461

This is not a sales pitch or anything like one!

I put out a similar message about two months ago, regarding callers to "BodyTalk" and have a couple slots available in programs this coming month -so many people responded and got turned away last time, I thought I'd post it again.

I produce a public radio program called "BodyTalk." "BodyTalk" is a medical call-in program with six doctors that we produce here in Columbus, OH and distribute to public stations around the world.

Anyhow, about the t-shirt. Every year during the summer we take a much deserved month of vacation, but we have to provide programs during that time. Each year we recruit "faux" callers to ask medical questions during our programs we produce for air during that break.

If anyone in this group is willing and available to help us out as a "faux" caller for one of these programs, we'll send you a BodyTalk tee shirt as a thank you.

Here is how it works, you can e-mail me and indicate your interest. Make sure to leave me a phone number where you will be at and WE WILL CALL YOU during the taping. If you don't have a medical question for one of our doctors, we can provide one - we just need warm bodies to ask questions.

Following are the doctors we feature and the times we will be taping with each. If you are interested and able to help, please make sure you indicate in you message which doctor you want to speak with. Then, on recording night, we'll give you a call, you ask your question, and we send you out a tee shirt. Also, if you are interested in a little more info on BodyTalk, check out our Web site at "http://wosuwww.wosu.ohio-state.edu/bodytalk.html"

ALL TIMES ARE EASTERM TIME ZONE

VerMeulen - Ear, Nose and Throat - Mon, July 17, 6:00 - 7:30pm

Fischer - Orthopedics/Sports Medicine - Mon, July 17, 7:30 - 9pm

Guthrie - Family Practioner (General Questions) Tues, July 18, 6-7:30pm

Rohyans - Pediatrics - Tues, July 18, 7:30 - 9pm

Hewitt - OB/GYN - Wed, July 19, 6 - 7:30pm

Gorfinkel - Cardiologist - Wed, July 19, 7:30 - 9pm

Thanks a bunch for helping and putting up with this long message!!!!

# 1086. New Service: AIRWAVES MEDIA JOB SERVICE

Newsgroup: rec.radio.broadcasting
Date: 1995-07-14 00:00:00 UTC
From: rrb@clm.aiss.uiuc.edu
Message-ID: <3u5g1r$3kb@vixen.cso.uiuc.edu>
Source record: 30524

Rec.radio.broadcasting and AIRWAVES MEDIA WEB have begun a free job placement service for media postions.

This service is open to anyone seeking employment in radio broadcasting.
OR
Anyone offering employment in radio broadcasting.

This includes all facets of the industry from Air Talent and Board Ops to Program Directors, General Managers Sales Reps and Engineering Staff. You can still post these to the newsgroup, but you can also send them to the service which is accessible via the AIRWAVES web page...

---

Here is the deal...

1. Send email to EMPLOYMENT@AIRWAVES.COM.
2. Use a descriptive subject that says one of the following...
o A) Help Wanted: Brief Description of opening.
o B) Position Wanted: Brief Description.

Note: You must use one of the above (A or B) as the beginning of your subject line or your message will be returned. This is required for sorting of you messages for easy retreival. Obviously Help Wanted means you are offering a position, Position wanted means you are looking for work.

Example...

- Help Wanted: Air Talent, New York City area
- Position Wanted: Engineer, 20 years Experience

3. Letter should be no more than 100 - 300 words (I won't do a word count, but brief and to-the-point will give the best impression)
4. Include your....

o A) Full Real Name
o B) Postal Address
o C) Voice and/or Fax Phone (voice preferred)
o D) Email address
o E) If offering a job, your company name and title.

5. No resumes, but you can include a URL to your web or FTP site if there is material there (resume, picture, sound clips etc) that might be of assistance.
6. If and when you fill your request, write and have your listing removed. It will be removed in 30 days anyway.

7. To look at the listings... point your Web Browser at..
http://radio.aiss.uiuc.edu/~rrb/job.html

I hope you are successful

Bill

# 1089. New England Radio Watcher: WPNW on the air

Newsgroup: rec.radio.broadcasting
Date: 1995-07-14 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3u5g1t$3kd@vixen.cso.uiuc.edu>
Source record: 30527

*After more than a month off the air, AM 550 is again operating in Pawtucket RI. Gone are the old calls of WICE; the station is now WPNW, sister to Boston's WBNW 590. Format is identical to WBNW - Bloomberg Business News much of the day, with local money talk 9am-4pm and Bruce Williams 7-10pm. And like all the Bloomberg startups I've heard (WBBR New York and WBNW), the first few days seem to be plagued with glitches in the PC that runs the whole show. A lot of the local inserts (weather and such) get cut off at the end, and driving home tonight I heard more than a minute of dead air, followed by the first few seconds of a spot, the first few seconds of a pre-recorded "local" news brief (actually from Metro Networks in Boston, 45 miles away), and then back into Bloomberg. Odd that they're using Metro for news, considering that WPNW is co-owned with WARA in Attleboro, Mass (just over the state line from Pawtucket), and WARA has its own newsroom. Also odd is that the spots seem to be mostly for Boston businesses (such as Clark Lincoln-Mercury west of Boston and the Offices at One Kendall Square, in Cambridge). Rhode Island now gets Bloomberg on 3 frequencies. In addition to WPNW, they get a strong signal from WBNW, and a pretty good signal day and night from WBBR 1130 New York.

*WFXT deal closes: The Boston Celtics officially sold WFXT-TV 25 today. Fox is paying $105 million to buy back the station, which it sold in the late 80s to acquire the Boston Herald. The deal was held up by an NBC objection -- the peacock people said Fox was foreign-owned and the sale would violate FCC rules. Every commercial station in town except for two have now changed hands in the last 5 years -- WHDH-7 from local David Mugar to Sunbeam, WFXT from the Celts to Fox, WSBK-38 from Gillett to New World to Viacom, WLVI-56 from Gannett to Tribune, WMFP-62 from local Avi Nelson to Shop at Home, and WQTV-68 (now WABU) from the Christian Scientists to Boston University.

*Bruds comes home: WBZ's David Brudnoy is doing his show from the studio tonight (Monday) for the first time since he collapsed on the air Oct. 24. Bruds later acknowledged that he has AIDS, and after recuperating from a serious infection, returned to the air January 2 from his Back Bay townhouse. He's in-house to interview ABC's John Hockenberry...who can't make it up to Brudnoy's apartment in his wheelchair. I hadn't seen David since October...and I can report to his fans that he looks great -- he's gained 30 pounds, is walking easily and without assistance, and he doesn't have that greenish cast to his skin that had us all worried.

*And I forgot to mention...WZEA-FM 102.1 Hampton NH is still WZEA, despite applying to change calls to WSTG. Meanwhile, the FCC has deleted the calls of WASY, 1590 in Gorham ME. That's the station that signed on in the late 80s as WPNN, after 1590's previous occupant, the former WJBQ, moved to 870 as first WKZN, then WLAM. 1590 has been dark for 3 years...and is not expected to return.

From: jgallagh@interserv.com
Message-ID: <3u5g1v$3kh@vixen.cso.uiuc.edu>
Source record: 30529

I'm sorry to hear that Upton Bell is no longer on the Sports Show weekends on WBZ 1030 am.

He has a very unique light delivery and great sense of humor.

Just when things turn boring, he switches subjects and gets going.

Weekdays he can be heard in Worcester, Mass on WTAG, 580 am (owned by Knight Quality Stations).

Years ago, Upton was the General Manager of the New England Patriots so the guy has quite a resume.

This is a loss for WBZ and I sincerely hope some other big Boston talker picks him up for weekends. Perhaps WRKO or WHDH could add him.

Of course if the rumors are correct that 105.7 FM (the former WVBF) is going talk, this would be the perfect place for Upton.

---

Another WBZ note....

Whoever is doing the promos for WBZ news should be fired.

They are stupid and degrading...meant to be funny but they are not. How can Gary Lapierre play those promos and come back on with a straight face ?

I was in college in Amherst, MA during the 1965 blackout, and I seem to remember at least one station in Springfield claiming that they were operating as part of the Emergency Broadcast System. I don't know much about the EBS, but this didn't seem to be kosher. Some more knowledgeable people at WMUA, the UMass student station, wondered whether that station would get in trouble.

You still don't get it.

Radio stations are NOT run for the benefit of employees or prospective employees. There is no law (and there never will be) that says we have to lose money because people think they are entitled to a certain standard of living.

I personally think I treat my people pretty well. But what made me profitable was strong cost control. Fewer jobs, better people. And, yes, when we buy another station, we immediately look for economies of scale. That usually costs someone a job. But threaten me with a union and you'll meet Mr. CartReady so fast you won't be able to clean out your desk before the new programming is on the air.

I don't need your help to lose my money.

> and the interest rate that was aggreed to as part of the deal.
>
> Second, there is the price that was paid for the station.

>>>> Tell me, Alan,

Do you own or have you ever owned a radio station?

Because your business fundimentals are a bit off.

Invested capital is every friggen dime paid for a station, whether it was borrowed or out of my pocket. When I borrow money to buy a radio station, I have never been able to avoid that nesty little device called the personal guarantee. Now maybe I'm stupid, but when my entire net worth is on the line if the radio station can't service the debt, I look at the who price paid as invested capital. And I wish to assure you that makes me a very sharp operator. Because I am not in love with the concept of the sheriff taking everything including my DSS dish with my NFL season package.

Second, I have never had the luxury of overpaying for a radio station. But I have had to bail out someone else's bad deal. That doesn't mean I should have to pay extortion to unnecessary employees to put the place back on its feet.

You seem to operate with the fantasy that I need large numbers of employees to do good radio.

I have a $2,000 computer system from CartReady in most of my operations that for the most part replaces $4.25 an hour board ops (who reall cost me about $8 an hour). That lets me spend more on my morning show.

If you think that's wrong, I make the same challange to you that I always make. You go out a buy a station and tell me how to do it better.

But if you insist on sniping from the sidelines, at least get your
facts straight.

## 1096. Earth 105, Portland

: >BTA-5H AM transmitters.

: What had been done in all three cases was solid state rectifier stacks
: replaced the thyratrons, and a motorized autotransformer was installed
: in the primary of the plate transformer. In all of the rigs this was
: done quite neatly and worked well.

The main problem with this approach is the size and cost of a 15 Kw 3 phase motorized autotransformer. Regular replacement of the autotransformer brushes is also an issue.

A muct simpler solution is to put in solid state diodes and simply use the plate loading control to trim power. If I remember right (and it's been 20 years since I've dealt with a modified BTA-5H) plate loading is done via an adjustable vacuum cap located at the top of the final compartment. It shouldn't be too hard to put a motorized adjustment on it.

# 1099. STATION MANAGER COMPENSATION

Newsgroup: rec.radio.broadcasting
Date: 1995-07-14 00:00:00 UTC
From: rickh@ns.cencom.net
Message-ID: <3u5g25$3ks@vixen.cso.uiuc.edu>
Source record: 30537

I'm in discussions re a station manager position and the GM and I are trying to come up with a compensation package that is performance-based and fair to both parties.

Duties: essentially I would free him from the day to day hassles inside the station so he could spend more time with major concerns--primarily key accounts & PR. He currently has 2 PDs, a sales manager and an office/business manager reporting to him. If I came aboard, it would be the GSM and me--and I would also be working with the GSM on major revenue-generating promotions.

Our market is only rated once/year, so tying compensation to a book isn't realistic. I expect I would be paid a salary for the time I spend with programming, but the big payoff would be some sort of bonus tied to new revenues.

Anybody have any suggestions on how we might be able to work this out? E-mail replies appreciated--and soon, because we're meeting again this Tuesday!

tnx
Rick

>TV side, News.

KSFO dropped G. Gordon again almost as quickly as they picked him up --
he was on for (at most) a month. There is now a local talk show form 9 to
Midnight.

To my knowledge, the nearest G. Gordon Liddy affiliate to the Bay Area
is AM 1360 in Modesto.

Message-ID: <3u5g28$3l4@vixen.cso.uiuc.edu>
Source record: 30540

FOR IMMEDIATE RELEASE:

Far West Radio, Inc., has entered into a Time Brokerage Agreement with Max Radio to supply programming to radio station KMTW-AM (1340), Las Vegas. Max Radio is also the owner of KKLZ-FM,
Las Vegas. KMTW is a 1000 watt station operating 24 hours a day on 1340am.

Far West is owned by Dave Rubio and Fred Weinberg of Tulsa, Oklahoma. Co-owned companies own
and operate stations in and around the Tulsa market.

"We believe in growth markets like Tulsa and Las Vegas," said Weinberg. "What we do best is local
talk radio. I have a lot of respect for the radio station owners in Las Vegas and we hope we can live
up to the standards they have set"

Weinberg said that after Far West's new studios are finished, KMTW would broadcast live, local,
interactive talk with a healthy dose of sports.

"We have a lot of experience in local talk radio," said Weinberg. "We have found that being involved
with the community is good business. We'll let our programming, which will be heard on KMTW, do our
talking for us."

Well, in the early 70s I used to hang out in the control room of KMET and often visit their tiny "paraquat room" next to the studio (this was in the Metromedia bullding, not the Sunset Bl address across from the Tar Pits). That and Jeff Gonzer's hospitality headed me into the business in which I've been for the past 21 years.....

Jon,

Those stations that are using your information without
your 'transmitting' it to Them are in direct violatoin
of the Communications Act with respect to "Third Party
messages."

Document the instances that they have done this and file
it with the Mass Media Bureau.

It is one thing for a fellow Part 74 license holder to
'pick up' a news lead and send their crew over to
where... but its a "Cow of a different Horse" when they
use the actual report of that other station on their Air.

## 1110. Same Frequency Request

Newsgroup: rec.radio.broadcasting
Date: 1995-07-14 00:00:00 UTC
From: luxt@river.it.gvsu.edu
Message-ID: <3u5g2f$3ld@vixen.cso.uiuc.edu>

Hi all--

I have a strange request. As the Webmaster of woodradio.com (stop by say hi! --shameless plug), I am looking for fellow stations on the net that broadcast on the AM frequency of 1300 and/or the FM frequency of 105.7. Just having ideas, that's all.... ;)

# 1111. Re: Simon Geller, WVCA

Newsgroup: rec.radio.broadcasting
Date: 1995-07-14 00:00:00 UTC
From: <>
Message-ID: <3u5g2f$3le@vixen.cso.uiuc.edu>
Source record: 30549

Yes, the passing of Simon Geller is a loss, and stirs up many memories
for me.

In the '70s, when I was a student at Gordon College on Boston's North Shore
I discovered WVCA, and decided I had to find the station and meet the man.
Exploring Gloucester, I walked up to the studio, and found Mr. Geller alone,
announcing a record, and eager to talk after the concerto started spinning.

He rambled a bit about his earlier days in New York, and made some disparaging
comments about Gloucester, which he saw as a hopelessly small town. But he had
evidently found an audience there. My eyes took in the simple studio, and I asked
about his antenna, which was on the roof of this downtown Gloucester building,
if I recall. He was paranoid that someone was always after his 104.9 license, and
reminded me that not that many years earlier, the FCC was begging people to start
FM stations.

Then he told me that at that very moment, some divinity students from my own
college were trying to obtain 104.9 to start a Christian station. Suddenly I
fell silent, feeling like an intruder of sorts. This was news to me, and I
realized that I could easily claim allegience to either side in this challenge.

I stepped back and reflected on Mr. Geller and his radio station. To have
a setup like this was once a childhood dream of my own, sitting below my antenna
in a town on the rocky New England coast, broadcasting what I wanted to a
community I would have liked to be a part of. But there was the other side, too;
Mr. Geller presented himself as a lonely, unkempt person who had simply found
a niche that was a little more visible than had he been a lonely, unkempt person
who was into stamp collecting or old movies. Was I just looking at myself many
years down the road had I followed a different dream?

When the Tangers bought the frequency and started "W-Bach", they beefed up the
transmitter and antenna, and now cover most of the northern half of the Boston
market pretty well. But when tune in to WB0Q, I still think of Simon Geller, and
hope that he would approve of the programming which I enjoy.

# 1112. San Diego Radio Watcher: 7.14.95

Newsgroup: rec.radio.broadcasting
Date: 1995-07-16 00:00:00 UTC
From: San Diego Radio Watcher <chris@terminus.wccs.saic.com>
Message-ID: <3uaont$14g@vixen.cso.uiuc.edu>
Source record: 30462

Here's what is happening in the 15th market:

"Dan Rather reporting. Imus in the Morning News." Dan Rather filled in for two newscast on Thursday filling in for Charles McCord [sp]. Charles is in Springfield, Mo., because his mother died this week.

KFI pulls ahead: The afternoon show of John and Ken on KFI is clearly the number one show in the Los Angeles area. The Orange County Register last Sunday had the Arbitron ratings, and the 3 - 7 p.m., slot for talk radio is owned by KFI. The Cox-owned station is at 4.0, while KMPC is at .9. [I'll post the numbers by Monday]

The D word: KKOS [95.9 Carlsbad] new moniker is "Diversified KKOS." The D word again: KKOS PD Sherman Cohen dropped the popular Dr. Demento show, and listener David Tanny wasn't too happy. He has led a small revolt in the news:rec.music.dementia newsgroup. According to the Escondido Times - Advocate, the San Carlos native would drive to Carlsbad to listen to the show on Sunday evenings.

The R word: Released. Kevin Kitchens quite KGB two months ago, and his side-kick Chic McGhee tried it alone. Two weeks back McGhee was "Released." Filing in the mornings while management looks for a morning drive is Denise Westwood. The TA said the morning bloc is "music intensive."

The T word: Jim Hightower apparently "ageeeetated" some listners of KOGO [AM 600, San Diego]; and was "terminated." Again, the Escondido Times - Advocate says that KOGO will pluck the Mario Cuomo weekend show.

Been there, did that - why that?: Apparently Charger fever is still around the San Diego area. Sunday afternoon XETRA-AM [690] will reply the SD Chargers victory over Miami from the last season from 2 - 6 p.m. You can check their new web page: http://www.xtrasports.com/ . What is missing? e.mail response.

Weaving a Webby World: Roger Hedgecock announced this week that KSDO [1130, San Deigo] will have a web page by August 1. Roger's show, is STILL the number one afternoon show in San Diego. He will be going to Texas to participate in the upcoming 'debate` sponsored by the group, "United We Stand."

Heard on the Mr. KFI show this week: Pat Paulson, along with Ruth Buzzi were hanging with Mr. KFI Thursday evening. Paulson, who is running for president, campaign slogan is, "United We Sit." e.mail: ppforprez@primenet.com

Rumor of the week? Imus has reportedly signed a LA station to host his morning show. Speculation is that it'll be on 710Talk, KMPC. Same source said that Art Bell would also fill in the Midnite to 5 a.m. slot. [CapCities/ ABC has Bell on KSFO, San Francisco.] Bell is pleased that 50kw KSTP has

joined the lineup for "Art Bell Coast to Coast." The Minneapolis station is heard throughout the mid-west [I remember listening to Machine Gun Kelly in the 70s.]

Missing Waves. A new "news" station is slated to kick off Monday [July 17]. XETIN has joined with KOJY, both at 540. The station, which will carry the Bloomberg news and financial features lacks one thing: acceptable coverage from San Diego's Sorrento Valley to north of Camp Pendleton -- which is part of their intended audience. Today, at my home in Oceanside, I apparently received both stations, the Mexico a split second after the Hisperia transmissions. Both signals are weak. Why am I bringing this up? Last Sunday's OC Register's ad for the "K-News" station promised to cover the area from San Diego to Los Angeles.

Revamped, more links, and expanded. During the last two weeks, I've taken the San Diego Radio log and enhanced it. The log now includes the "Los Angeles Radio Log." I'm still fine-tuning the LA section, but the radio with pictures section is complete. Please try it out, and any feedback is appreciated. http://www.geopages.com/RodeoDrive/1102/

>>It may be "Smooooth"....but how do you get "Jazz" out of "Am
I the Same Girl" by Swingout Sister?>>

I've read/heard this comment so many times... I think I finally have to
stop complaining about it at cocktail parties and make myself heard...

Smooth Vocals + Contemporary Jazz = Smooth Jazz

Smooth Vocals (Luther, Anita, etc). Contemporary Jazz (David Sanborn,
Lee Ritenour, etc.)

At the risk of playing fast and loose with interchanging musical genres
and radio formats, indulge me in the following:

For example: Why does traditional jazz get special status but not
classic rock???? Elvis don't sound much like Hootie and the Blowfish,
So, we have classic rock and modern rock to differentiate the two.
Think about any "type" of music and they all have some sort of
adjective in front of them...(classical, neo-classical, ac, hot ac...)

Frankly I'm at the end of my patience with all these people sniffing
that "that isn't jazz"... Well, fine. No-one's holding a gun to your
head making you listen to it, so play your 78's and stop whining.

Thanks. I feel better now.

Annie in Philadelphia.

Rick,

Tough question to answer w/o knowing the size of your market, salary levels in the market and salary levels in your station. Generally, you would be paid a flat salary for a major portion of your compensation. Getting an override on revenue is ok for the sales manager, but as a station manager your compensation should be tied to net operating profit (NOP). Perhaps on a quarterly basis (getting paid monthly would lead to wild fluctuations).

It's hard to recommend a percentage, the station I last worked at did about $2 million/year, I'd love to get 0.5% ($100,000) as a bonus. Other compensation plans I've seen include flat dollar amounts for achieving a certain NOP goal. Yet another variation would give you a percentage of the increase in NOP from the prior year.

Good negotiating,

Pat Ryan

Hi Alan,

I agree with your assessment. It's just too bad that too many investors flipped their properties, took their profits and got out while the market was rising in the 80's.

It was the greed and lack of vision of those who were the last to be handed the hot potato who are stuck with it. Too bad the financial rebalancing can't include the profiteers of the mid-late 80's who got theirs and got out.

Where did that money go anyway?

Regards,

Ty Ford

How about an even simpler solution, just a few bucks? Open up the FM receiver, find the little three lead 10.7 MHz ceramic filters. Most manufacturers use 280 kHz wide versions, which offers almost no adjacent channel rejection. Those filters are made in varying bandwidths down to 110 kHz. I recommend going to 150 kHz versions, because they vary in center frequency some, and you need some safety margin. You can get the narrow filters from hobbyist stores and mail order places like DigiKey. I have installed them in all of my radios, and can virtually get rid of adjacent local stations. If there is a signal at all, I can get it 200 kHz away.

Bruce Carter

## 1124. PHOENIX: Pratt's future?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-16 00:00:00 UTC
From: Michael Hagerty <Michael_Hagerty@azfamily.com>
Message-ID: <3uaoo9$164@vixen.cso.uiuc.edu>
Source record: 30474

The market is still buzzing over AOR KUPD(97.9) morning legend Dave Pratt's one-time fill-in on news/talk KTAR(620)'s "620 Sportsline" show last week.

Pratt, who has been one of the top 5 talents in the Phoenix ratings since his beginnings nearly 15 years ago at KUPD, filled in for the vacationing Brad Cesmat.

Recent remarks by Pratt about the loss of KUPD's "soul" since its acquisition by Sandusky Broadcasting(KDKB, KUKQ) have many wondering if he'll bolt when his current contract expires in a year and a half.

Pratt is known to love Arizona and a move to sportstalk... especially at a powerhouse like KTAR...could give him longevity beyond that available as an AOR jock.

# 1125. PHOENIX: Kepple Fired a s KGME PD

Newsgroup: rec.radio.broadcasting
Date: 1995-07-16 00:00:00 UTC
From: Michael Hagerty <Michael_Hagerty@azfamily.com>
Message-ID: <3uaoo9$169@vixen.cso.uiuc.edu>
Source record: 30475

Longtime market talent Mike Kepple(KUKQ, KTAR, KOY) has been fired as Program Director of Sportstalk KGME(1360). Chris Visser from Miami, Florida replaces Kepple on July 31. No word on changes beyond that.

Kepple's canning is the latest in a series of shakeups at KGME/KEDJ/KHOT in the wake of GM Kathy Lawrence's firing three weeks ago. KHOT(100.3) PD Carla Foxx followed Lawrence out the door days later, and Friday(7/14) is the last day of KHOT's four month old "Hot Talk" format, as the station switches to a fulltime simulcast of Modern Rock KEDJ(106.3) at 7pm.

Howard Stern's syndicated morning show will now be heard on all three stations, which appear to fill in each other's signal limitations.

:: WBAP became the fulltime occupant of 820 where it is to this day. WFAA
:: became the fulltime occupant at 570. 'BAP keeps cranking along, but
:
:I believe it changed about 1973 though I may be a little off about the
:year. I do remember that neither owner wanted to give up 820, and both
:owners were upset about the arrangement. Finally the FCC drew straws or
:something. I wonder who got custody of the cow bell...

I thought it was somewhere around 1969 or 1970 when the time-share ended.

The reason WBAP wound up on 820, and WFAA on 570, was that the Carters
(WBAP) paid Belo (WFAA) something like $8 million for the rights to
the clear-channel 820.

Belo sold WFAA and KZEW to Cox Broadcasting in the late 70s.
KZEW is now KRRW (CBS o&o).
WFAA is dark. KLIF moved from 1190 to 570 about four years ago.
And WBAP kept the cowbell -- but it's now retired to the overnight show.

# 1127. Simon Geller and WVCA-FM

Newsgroup: rec.radio.broadcasting
Date: 1995-07-16 00:00:00 UTC
From: "PETER Q. GEORGE, N1GGP" <PGEORGE@WELLESLEY.EDU>
Message-ID: <3uaoob$16p@vixen.cso.uiuc.edu>
Source record: 30477

Simon Geller WAS W-V ("V" as in Victor) WVCA ! He was one of the MOST colorful of people this industry ever produced. We seem to be losing some many of radio's great colorful heroes, Wolfman Jack for one and now Simon Geller. You might not have really enjoyed the music he brought to you with the "dead composers society" he spewed out, but listening to his banter was an event in on itself. He was very proud of the local handful of sponsors who stayed to the end....the couple of banks and a local candy shop. Most of the broadcast day was underwrited by listeners who send those precious checks he begged for. He admitted to me on the many times that I had spoken to him that he had a voice "only a mother could love". That voice, in my our opinion, set him apart from the other "la-di-da" jocks who nowadays infect the entire broadcast spectrum.
This man went through HELL ! His license was revoked in 1982 by the ever-so-kind FCC who gave the CP to the late Sy Spaulding (a man who had many political connections) who promissed the world that he was the better candidate and promised oodles and oodles of "public service" and even would provide "SOME" classical music. (Yah....) He had no money problems. either. Unfortunately, Mr. Spaulding left this world in 1983 after a fatal heart attack. His "Grandbanke " broadcasting venture died with him.
Simon was awarded another license, after some prodding with a VERY vocal group of listeners and local people of high standing made their voice be heard at the FCC. He was to improve the signal a few times to the point where WVCA was listenable throughout the Greater Boston area....except the very small area near Northeastern University where 10 watt WRBB resides. The FCC bull$hit drained him out of his strength, his already failing health and pitiful cash reserves.
Bitter ? You bet he was, and with good reason ! In spite of it all, he prevailed. I never had the pleasure of meeting the man, but our many phone calls we had before he sold the station several years ago were genuine enjoyment. Ham radio came up in one of those times. He used to be W1BAG and said that his ham radio hobby was a major factor in him getting WVCA-FM on the air in 1964....in addition to his radio engineering jobs in New York and other places. You may not remember by WVCA started life as a TOP-40 ROCK station ! He bought his first transmitter from WCRB, afet that station switched to stereo in 1963. Needless to say, an FM Rock station at the time had NO chance of making it without an AM counter-part. He originally wanted to have 1410 kHz in Gloucester in 1962, but the Sulivan family out of Brockton won the CP. But, the FCC offered him 104.9 MHz instead. He took it, gladly. After 3 years of draining him dry with the TOP-40 format, in 1967...he let his staff go and basically threw away his ASCAP and BMI licenses and played ONLY public domain material. That was to sustain him until 1987 when he called it quits and sold WVCA to Doug Tanger with the promise to keep 104.9 classical. Today WBOQ, under Tanger continues that promise of classical music on 104.9,

but with a few changes. It is now in stereo and plays more modern compositions in addition to the public domain material. It has been said that Simon Geller was a very scruff, bitter and lonely man. But I hope he eventually knew that he was appreciated and was a man who stood by his rights to keep that station alive. Whoever tried to take it from him, should have hung their head in shame. There will never be another Simon Geller, and for that I am sad.

Blake Lawrence wrote:

: It's official...announced today (7/13)...Susquehanna is buying KHQT in the
: San Jose market (class A - 97.7) and rumor has it they'll use it to further
: the reach of KFOG, their AAA San Francisco FM.

Supplemental info: KHQT is licensed to Los Altos, a suburb near San Jose. What had been the San Francisco/Oakland and San Jose radio markets have nearly melded into one, due to the long commute patterns between the areas and the infill of homes between these two urban hubs less than 50 miles apart (SF at 735,000 people and SJ at 800,000 people). However, few FM stations can cover both areas well. This simulcasting may become a trend.

Previously, the stations at 98.9 in SF and 99.1 in Santa Cruz (30 miles south of San Jose), known variously as KDBK/KDBQ and KSRI/KSRY had simulcast for about 5 years, but didn't make any money. Today, another SF (actually, San Mateo) station, KYLD (formerly KSOL) is simulcasting their co-owned Santa Cruz station, now known as KYLZ. I think the jury is still out on whether this will work or not.

>Boston talker picks him up for weekends. Perhaps
>WRKO or WHDH could add him.
^^^^
Errr...That's W-E-E-I, John. We're fast approaching on 1-year anniversary
(Aug.29) of the Big Shuffle orchestrated by American Radio Systems
and Back Bay Broadcasting. It wasnt one of the highlights of Boston's
radio history as the old WHDH AM 850 was "flushed down
the toilet" by a disgruntled 'HDH staffer about to lose his job.

I do agree. Upton will be missed. Unlike, Eddie on WEEI, he can be
entertaining and talk about all 4 major pro sports without any limitations.
Upton might resurface at WEEI AM 850 or WBPS AM 890, or maybe even
WKOX/WKLB whenever they switch to talk.

In other Boston Radio Sports News :

We have to wait and see what happens over WEEI. A personnel shake-up
was supposedly in the works. Reportedly. new PD Glen Ordway, isnt high on
mid-day voice(10-2pm), Dale Arnold who's laboring without a contract.
Arnold is going on 2-week vacation after today(Friday) and it'll be
interesting to see if returns to the same station or same shift.
In addition, Boston Globe reports today that Ordway is talking
to the Red Sox' TV/ESPN voice Sean McDonough(son of the Boston Globe
scribe and NBC football commentator Will McDonough). With McDonough
in the mix, Arnold might become expendable....I have a feeling
will have a brand new 'EEI weekday/weekend line-up come September.

Also, WEEI is very slow in naming a new Celtics radio team. With 2 1/2
months to go before the opening of the NBA's training camp(provided
there's no NBA work stoppage], you think they'd have everything in
place by now for broadcast sales purposes. That makes me feel that
Ordway will come back to the Celtics' radio mike to do play-by-play.

Finally, somebody at Prime Sports' affil WBPS{We are Boston's Prime
Sports] AM 890 had enough brains to change color scheme on their bus
signs and billboards. Altough, the old ones still pop around from
time to time...Lavender and Gold? For a sports station? Please!!!
It's been changed to Blue&Yellow.

-Mark

## 1131. WNEW format change almost believable

Newsgroup: rec.radio.broadcasting
Date: 1995-07-16 00:00:00 UTC
From: st92j2gl@dunx1.ocs.drexel.edu
Message-ID: <3uaoof$170@vixen.cso.uiuc.edu>
Source record: 30481

There's been a lot of talk lately about how WNEW, while changing their positioner, still sounds like the same old station. I drove up that way yesterday, and I'd have to agree. However, I still think that they may be in the middle of a very very very *gradual* song by song (by song by song by song!!) format change.

A very reliable source tells me they've been playing Seal, Annie Lennox, Boomtown Rats ("I Don't Like Mondays"), Eurythmics, Dream Academy ("Life In A Northern Town"), Concrete Blonde ("Joey"), Tori Amos, Modern English ("I Melt With You"), Motels ("Suddenly Last Summer" & "Only The Lonely"), Talk Talk, Blondie ("The Tide Is High"), 'Til Tuesday ("Voices Carry").

As far as I know, these aren't your typical AOR artists. There *is* a real 80s slant though, wouldn't you say?

I think it's just a big evolution taking place here. The decline/death of AOR, maybe? I think it's a situation like: soon, it'll be two rock formats - "Classic Rock" and "The Alternative to Classic Rock" (ie. "New/Modern Rock"). It would seem that all the "traditional" AOR artists are getting by just fine on strictly album sales; meanwhile, all the new acts are heading straight for modern rock/alternative radio. At most AORs, the percentage of currents that are considered "modern/alternative" is probably *at least* 75%. So, they (AOR people) probably figure, "Hey, let's just send all the old stuff over to the classic rock station, let the 'traditional' artists go with just sales, and we'll concentrate solely on the 'New' rock."

When people tune to a certain station these days, they only want to hear *one* type of music on that station. Hence, the AORs aren't going to attract the younger listeners that they need when, 9 times out of 10, I tune to WNEW or WMMR and hear something that wasn't even released in this decade!

To put it simply, there should only be 2 rock formats: "NEW ROCK" and "OLD ROCK". What we're seeing in New York is this station giving up on trying to attract older listeners, and going, instead, for the younger crowd. I think, if it's not already "happening", there's going to be a BIG trend.

I'm not typically a big fan of fragmentation, but it's happening.

Anybody agree/disagree? Am I totally off the wall here??

-Darius at Y100 WPLY Philadelphia, where we're uniting the CHR listeners and the AOR/Modern rock listeners under one "New Rock" station :)

## 1132. Digital Audio Workstations

Reply-To: ch474@freenet.carleton.ca (Craig Jackman)

It's the time of year again when I get to pester the GM to buy me a
workstation. Does anyone have any preferences (and why?).

I've used the DSE-7000, and its easy to use, but I reached it's limits
pretty quick. I've seen a Pro Tools set-up, but I don't need the video sync.
I've also demo'd Spectral Synthesis, Studer/Digitech Dyaxis II ($$$$$),
and Microtech.

Since I'm using an ADAT, a compatible interface would be nice.

I'm thinking about a Digidesign Session 8, a Fostex foundation, or perhaps
a Roland DM_800.

I'm the Production Director for CHEZ-FM, Ottawa Ontario Canada.
106.1 FM/Classic Rock.

Price is not a major concern. The best product is.

Good news for O.J. Simpson Junkies!

Actor/writer/comic Harry Shearer, who appeared last night on the Conan O'Brien Show and Comedy Central and discussed his new comedy CD "O.J. on Trial: The Early Years," has his own brand-new site on the WWW! You can hear audio excerpts from the CD, enter a contest to win a copy, and actually order it online.

The Web site is also full of fascinating and fun material regarding Harry's showbiz career-- his time on SNL, his experiences as a member of the mock-rock band Spinal Tap, actor on The Simpsons (he plays Mr. Burns, Ned Flanders, Smithers, etc.), thoughts on his syndicated radio broadcast Le Show, and much much more.

If you're truly a hard-core O.J. fanatic, look under "Found Objects" for an audio clip of television trial commentator Stan Goldman calling his Mommy.

Visit Harry's site at <URL:http://www.pobox.com/harry>

Enjoy!

Killer Web pages are our business!

# 1134. [FREE!] AIRWAVES RADIO JOB SERVICE

Newsgroup: rec.radio.broadcasting
Date: 1995-07-16 00:00:00 UTC
From: EDITOR@airwaves.com
Message-ID: <3ubu17$m3v@vixen.cso.uiuc.edu>
Source record: 30484
Cross-posted to: rec.radio.broadcasting,rec.radio.shortwave,rec.radio.info,rec.radio.noncomm,alt.news.media,sci.electronics,comp.dcom.telecom.tech,chi.media,ba.broadcast,alt.radio.networks.npr,alt.radio.college,alt.radio.talk

Rec.radio.broadcasting and AIRWAVES MEDIA WEB have begun a free job placement service.

This service is open to anyone seriously seeking employment in radio broadcasting ... OR ... Anyone offering employment in radio broadcasting.

This includes all facets of the industry from Air Talent and Board Ops to Program Directors, General Managers Sales Reps and Engineering Staff. You can still post these to the newsgroup, but you can also send them to the service which is accessible via the AIRWAVES web page...

---

Here is the deal...

1. Send email to EMPLOYMENT@AIRWAVES.COM.
2. Use a descriptive subject that says one of the following...
o A) Help Wanted: Brief Description of opening.
o B) Position Wanted: Brief Description.

Note: You must use one of the above (A or B) as the beginning of your subject line or your message will be returned. This is required for proper sorting of messages for easy retrieval. Obviously Help Wanted means you are offering a position, Position wanted means you are looking for work. Be sure to list *what sort of job you are seeking or offering as part of the Subject: line*.

Example...

- Help Wanted: Air Talent, New York City area
- Position Wanted: Engineer, 20 years Experience

3. Letter should be no more than 100 - 300 words (I won't do a word count, but brief and to-the-point will give the best impression)
4. Include your....

o A) Full Real Name
o B) Postal Address
o C) Voice and/or Fax Phone (voice preferred)
o D) Email address
o E) If offering a job, your company name and title.

5. No resumes, but you can include a URL to your web or FTP site if there is material there (resume, picture, sound clips etc) that might be of assistance.
6. If and when you fill your request, write and have your listing removed. It

will be removed in 30 days anyway.

7. To look at the listings... point your Web Browser at..
http://radio.aiss.uiuc.edu/~rrb/job.html

Note: This service is *only* for QUALIFIED individuals who are
SERIOUSLY seeking employment in radio broadcasting and
bona-fide employers in need of qualified help. This is NOT a
"Gee it would be cool to play Megadeth on the radio" list. any
listings that don't appear serious and qualified will be discarded.
However I take no responsibility for the legitimacy or
qualifications of any poster to this service, that is your job when
contacting someone.

Take a look at what is already online and then send in your Help otr
Positions wanted article. I hope you are successful.

Bill

From: mward@crl.com
Message-ID: <3udbsv$7aa@vixen.cso.uiuc.edu>
Source record: 30485

KFBK (News Radio 1530) news director and afternoon news host Rick Van Cise is leaving at the end of the month, to return to the station he came from - KOMO/Seattle (AM 1000).

Rick's only been with us for a few months, and has quickly gained recognition for his work with KFBK. He was actually a long-time staffer of one of KOMO's competitors (KIRO), joined KOMO for a brief time and then came to us. He returns to KOMO next month as program and news director. Those of you looking up in Seattle - reports have mentioned that KOMO is a full-service station "evolving" into a news/talker, and I'm sure that's high on Rick's agenda when he returns.

There is no word at this time on either temporary or permanent replacement for Rick. It's sad to see ya go, guy.

Mike
(views and opinions expressed are my own, and not necessarily those of KFBK, though I'm sure folks there would agree anyway. ;)

From: richwood@commspec.com
Message-ID: <3udbsv$7ab@vixen.cso.uiuc.edu>
Source record: 30486

IL>I was in college in Amherst, MA during the 1965 blackout, and I seem to
IL>remember at least one station in Springfield claiming that they were
IL>operating as part of the Emergency Broadcast System. I don't know much
IL>about the EBS, but this didn't seem to be kosher. Some more
IL>knowledgeable people at WMUA, the UMass student station, wondered whether
IL>that station would get in trouble.

Joseph,
That station was probably WHYN. At the time they were the "official"
primary EBS station in the market. They were fully equipped with an
underground studio and all the emergency equipment the FCC liked to see
in an EBS station. After all, in 1965 we were convinced the Commies
would drop the bomb any second. I was given a tour of the facility.

Don't forget that EBS is for emergencies of all kinds, not just
threats of war. The 1965 blackout was a time when a few stations were
the only ones able to broadcast without commercial power. WHYN was one
in Springfield and WBZ in Boston was another. Almost everyone else was
off the air.

Rather than getting in trouble, WHYN would have probably received a
commendation.

Rich

You don't have to go back to 78's to hear real jazz...or even back as far as the 1980's. How about such young players as Roy Hargrove? And jazz doesn't have to fit rigid stylistic boundaries, either. How about western swing?

IMO, what's being called "smooth jazz" is just elevator music for yuppies--about as interesting as a Mantovani record, and good for the same purpose. These stations are the 90's equivalent of the "beautiful music" stations that died out when their audiences got too old to attract advertisers. Unfortunately, they have driven real jazz--improvisational music that swings--off the commercial airwaves almost everywhere.

I don't have a problem with the marketplace doing its work (although I cried when KJAZ in San Francisco bit the dust). But calling Lee Ritenour or David Sanborn a jazz player is a bit of a stretch...and I even own a couple of their albums!

From: jmarch@wheel.dcn.davis.ca.us
Message-ID: <3udbt3$7ag@vixen.cso.uiuc.edu>
Source record: 30491

Not to sound like Andy Rooney... but didjya ever notice that the disclaimer shorthand that's used to trim time in produced spots becomes so entrenched and so accepted that it's quickly embraced as the only way to state a particular message? Regardless of how ungrammatical or unnatural-sounding they may be, certain phrases spread and take over like linguistic infections.

Case in point: "See store for details." You mean there's not sufficient time to say, "Visit your nearest store for details"? (And I wonder if anyone, anywhere, has ever actually been prompted to "see store for details.") Picture this:

"Where are you going, honey?"

"I'm going to see store for details."

No one talks like that. But that hasn't dissuaded ad agency folks. Other examples of impatient shorthand: "Member FDIC."

"Actual mileage may vary."

And, of course, "Batteries not included."

No more time. Must go.

>
> Susquehanna also owns Rush/sports outlet KNBR-680.

It'll be interesting. While KHQT has pretty good coverage in the South Bay, it's still a small station with a small signal, and I have my doubts that it will add much in the way of numbers for KFOG. Identity isn't just call letters; it's dial position. And 97.7 is a long way from 104.5.

Other experiments of this sort haven't sorked well. I don't believe Wild 107 (KYLD) has been helped much, if at all, by its "translator," KYLZ, at 99.1 (a great example of how maximizing a shortspaced license will often do little more than screw up a situation). Double 99 and (the late, great) KDBK/Q (both of which simulcast on 98.9 and 99.1), also had mixed success at best in the South Bay, but they also tended to ignore the 99.1 coverage area, especially Santa Cruz and the Salinas Valley. They were very SF-centric. Just like Wild 107 is today.

So I think the plan will work only if KFOG makes a committed effort to serve the South Bay. And that means more than saying "...and 97.7" with every ID.

I kind of wonder why KFOG didn't just go up to two bays with their antenna, rather than the one bay they have now. Two bays would replicate KKSF, which has a two bay antenna mounted on the same mast as KFOG, just a few feet above -- and both stations have nearly identical radiated power (7800 watts for KKSF and 7900 for KFOG), producing identical "predicted" coverage. The only advantage to KFOG's one-bay antenna is a slightly stronger signal below the Mt. Sutro antenna, down into the hills of SF. But KKSF doesn't seem to be hurting in that territory, either.

Curious, what are KKSF's numbers in the South Bay? I'll bet they're not bad.

Doc

# 1145. Smooth Jazz... Is it Jazz?

Newsgroup: rec.radio.broadcasting

} >that "that isn't jazz"... Well, fine. No-one's holding a gun to your
} >head making you listen to it, so play your 78's and stop whining.

First of all, I have personally had it to here with the use of terms like "Whining" and "Sniffling" when referring to others with differing views or concerns. People who have a concern and express it are entitled to the same respect as those who disagree. (There, now *I* feel better).

With that, Mark Howell (KUZZ1@aol.com) replied...

} You don't have to go back to 78's to hear real jazz...or even back as far as
} the 1980's.
}
} These stations are the 90's equivalent of the "beautiful music"
} stations that died out when their audiences got too old to attract
} advertisers. Unfortunately, they have driven real jazz--improvisational
} music that swings--off the commercial airwaves almost everywhere.

Ok, a couple of dynamics are at work here.

1) We have to realize that the *smooth jazz* format (which is actually called NAC, New Adult Contemporary or New Age Contemporary) is really not a single format, but a wide genre of various flavors. For instance, Chicago's WNUA, which is one of the nation's finest NAC's IMHO, has a wide variance in their music and presentation from daytime to evening and then overnight. Some NAC's are really little more than AC's with a leaning toward instrumentals and light urban vocals. Others skew heavily in the direction of fusion and modern Jazz. Some NAC's skew very urban, and these are the ones that sound the most Jazzy. And, as Mark indicated, some are, frankly, modern elevator music (or as my friend once remarked, "Music for yuppies to make love in elevators by").

2) Regarding the Traditional Jazz/Classic Rock comparison...

ANNIE SAID> Elvis don't sound much like Hootie and the Blowfish,

This is true, Annie, but there is no shortage of Elvis, Beatles, Led Zepplin or Joe Walsh on the airwaves and thus the New Rock is not likely to be confused with "rock in general". However, there is a marked lack of authentic jazz on the airwaves and the use of *smooth Jazz* by some of the less jazzy flavors of NAC does lead to the misunderstanding that this music is jazz. Sure some of the fusion and such is certainly a flavor of jazz (despite what Mark says). But I have heard a lot of stuff on NAC's like WQCD in New York that is absolutely not jazz in any way shape or form. Also, there is a LOT of jazz out there that is neither Glenn Miller nor Anita Baker.

Now before I get flooded with a virtual wheelbarrow full of email telling me that "Jazz is dead because it cannot be sold commercially" let me say that I understand that this is the common wisdom and that there are those who can present me with gigabytes of research that supports that position. And they may be right... But there was a time, not too long ago, that NAC wan not even a format and if you told the average media mogal that you could stay consistently in the top 5 in a market like Chicago with the likes of the Rippingtons, Shadowfax, David Sanborn, Lee Ritenour, Kenny G and even Ramsey Lewis, they would have shown you those same gigabytes of data to prove you wrong... yet that is what WNUA does in Chicago and has for many years. They do it with a more commercial, familiar and vocal mix by day and a more instrumental, moody and jazzy feel by evening and night.

NAC's of various flavors are springing up like tie-dye's at a Dead Show. It is a format which has arrived, big time. And if done well it is a good format and one which attracts a wide audience of various racial, economic and musical persuasions. I believe that a more straight-ahead jazz format could also work, if it were done right, promoted, researched, and presented on a clear strong FM signal by someone with deep enough pockets to really give it time to establish itself.

So the reason so many people are upset by the use of the term *jazz* to refer to NAC is because there is not much to anchor the genre of jazz other than the NAC and it makes people tend to take Annie's position that *real* jazz is only available on 78's or very old vinyl. Plus, as mentioned above, there are wide variances in what is called *smooth jazz* or NAC. Some are more jazz-like and others are very bland, vanilla and do resemble "Elevator Music For a New Age"

NAC is not bad music. Most NAC's that I have heard of seem to do well in the ratings and seem to draw from a demographically diverse listener base. This can't be bad from a station's point of view. It won't satisfy jazz purists, but I would rather see a well run NAC on the air than *yet another "LITE-FM" AC clone*.

Sincerely

William Pfeiffer

The magnificent KPIG at 107 -oink- 5, licensed to Freedom, CA and serving the Santa Cruz/Salinas/Monterey Bay area from studios in Watsonville, has been sold to Elletra Broadcasting, owned by Ken Dennis.

The KPIG people say the sale will go through in September and the format will remain the same.

If you want a visual sampling of The Pig, set your browser to http://www.kpig.com/; and for the Real Treat, get RealAudio and tune it in over the I-Waves.

KPIG is nothing other than the only living commercial station on earth. I can't listen to it without slamming my fist on the steering wheel and saying, "Damn, that's good." They play great music (which, get this, the _jocks_ select), have great fun, and serve their community well. They are loved, and with good reason. Let's hope Mr. Dennis's sees to adding the format in other markets.

Mr. Dennis alreay also owns two other stations in the market: Carmel's KAXT on 101.7 and Hollister's KXDC on 93.5 (once the home of KHIP, a forerunner of KPIG and, like KPIG, in the bloodline of the legendary KFAT, which started it all). KAXT has been a country station and KXDC has been a smooth jazz station. The two, however, will swich channels. Though their coverage overlaps quite a bit, the smooth jazz format is better suited for the Monterey/Carmel area 101.7 serves best, while the country format is better for the Salinas Valley and Hollister area that 93.5 serves best.

thorburn@.xyplex.com (Gary Thorburn) wrote:

>Are there plans afoot to move North American MW broadcasting to the
>9 kHz spacing as is used in Europe ?

Not that I've heard of. The last time this was proposed was in 1978.
The hue and cry that arose from the National Association of Large
Pre-Existing Broadcasters Who Want No More Competition helped nip it in
the bud.

There *are* some technical reasons for making AM channel spacing the same
the world over: interference. I remember in the late 70s when I was an
AM DXer, I would often hear a loud 3 kHz squeal over a semi-local station
on 1590 kHz at Waterbury, CT. The inteferer was a German (?) station on
1593 kHz.

There's been a lot of hoo-ha about the Navy's Very Low Frequency radio broadcasts from northern Wisconsin. The environmentalists are all cheesed off because it is supposed to be bad for the environment, etc...

What I want to know is how does this work? It's goal is to communicate with submarines around the world. What frequencies? What transmission method? What wattage would you need to hit a sub in the Indian Ocean from Wisconsin?

>That's the old WKAZ-950, the AM Top 40 giant, isn't it? They always did
>have a sketchy nighttime signal. WVAF (V-100) knocked them off in a book
>or two, as I recall.

V-100 is now #2 in the market with an 11 (Behind WQBE(FM) with a 34!).
The heritage WKAZ calls are now on 107.1 with a station owned by Empire
Broadcasting (Steve Kingston, of Z-100 New York). The format is 70's. Best
part is they even play up the change. ("20 years ago we were on 950 AM. Now
we're on 107.1. Same music.")

>
>> As a side note, WCHS(AM) ("Newsradio 58") also owns WCAW
>> ("68-CHS"). When the new company bought WCAW a couple of
>> years ago, they took it from a 50,000 watt directional daytime signal

>> Carolina.
>
>WCHS owns WCAW now? Are they really calling it "68-CHS?" That must be
>confusing, especially with the call letters on the OTHER frequency...

The only time you hear the WCAW legal is at the top of the hour. The rest of the time they are "68 CHS." If some of the books end up crediting WCHS by mistake, they don't care. To the owners (West Virginia Radio) 68 is a throw-away station. They use it as a bonus for the other four stations they control in the market. Sad part is their sister station, WKWS(FM) 96.1 ("Kicks 96") which was #2 just two years ago is gasping for breath, and may be passed in this book by 68 CHS. They are currently #7 and are expected to continue to fall. In fact, I have a bet with some people down there that 68 will beat Kicks in the new book. Partly because I think it will, and partly because I hope to see the owner embarrassed.

>
>Someone told me a funny story once about the WCAW directional array being
>on land owned by monks or priests or whatever, and WCAW having to run some
>sort of religious program as a result!

The towers were on hallowed ground. Just a church, though. Not anything really interesting, and yes, they did have to run religious programming. That was another reason West Virginia Radio moved the towers and changed pattern-- when the new owners came in they raised the rent on the land.

>
>Is WCAW still directional at night? I seem to remember the station using
>four towers with 250 watts at night, or some other directional
>monstrosity.

They are non-directional 60 watts at night. Unfortunately, V-100 (WVAF) is also on that tower. The new location sucks incredibly. They are inside a geographic shape which can only be described as a cereal bowl. The tower JUST BARELY peeks over the ridge, so much of the wattage is wasted. They were going to add another 200 feet to the tower, but if you draw a line from the main runway at Yeager airport (which is several hundred feet above the city), you run directly into the V-100 tower site.
The owner is one of the few people who ever impressed me. He has a "if you think small you will be small" attitude. But in his haste to get things put together in Charleston with five stations, he has made some bad mistakes. If the power is interrupted to their building, it would knock half the stations in the market off the air. Not a good scene, especially since the CE is trying to get them all designated primary EBS. (It's a market where EBS is used VERY often.)

> their co-owned Santa Cruz station, now known as KYLZ. I think the jury
> is still out on whether this will work or not.

Los Angeles has at least three of these types of operations:

* KFOX Long Beach and KRZE Ontario, both on 93.5 with a Korean format

* KYKK Santa Ana and KYKF San Fernando. on 94.3 with Country Western

* KACD Santa Monica on 103.1, along with a station in Huntington Beach

* (I think) dual stations on 103.9 in Inglewood and Riverside, with a soul format

There amy be others. Also, on AM, KPLS Santa Monica (830) and KCTQ
Thousand Oaks (850) with the Radio Aahz childrens programming

> WOSH-WVBO

Longwave is commonly used to communicate with subs. It has the ability to penetrate the ocean (something impossible at higher frequencies). Kinda nice since your secret nuclear sub does not have to surface to communicate, which would blow its cover.

The "generally accepted" terms for radio frequencies:

ELF (Extremely Low Frequency) Below 3 KHz
VLF (Very Low Frequency) 3-30KHz
LF (Low Frequency) 30-300KHz
MF (Medium Frequency) 300-3000 kHz
HF (High Frequency) 3MHz-30MHz
VHF (Very High Frequency) 30MHz-300MHz
UHF (Ultra High Frequency) 300MHz-3000Mhz

Since the frequencies used are so low, only narrow bandwidth modulation methods can be used, either CW (morse code) or low speed RTTY (radio-teletype). You can't send a lot of data. Obviously, this isn't much of as problem, the most important use to to be able to tell subs to launch their missiles.

Transmitter powers on longwave are generally extremely high, several megawatts not uncommon. Due to the long wavelengths (miles) huge antennas are necessary.
Propagation is not affected (as much) by solar conditions.

Of course the environmentalists are all cheesed off, they always are when something that they don't comprehend is proposed. Health risks are comparable to those from AC power line emissions - ie: zero.

> used to be 1530 and I couldn't get the 1360 in Dayton to figure out
> what it was now, or dark?

Jim,
The old WKRC (AM 550) was WLWA for about a year. Jacor than bought it
and either bought or did programming for 4 other Cincinnati stations.
As you stated 550 is now WCKY. It is all talk now. The only person
left from when you were in Cincinnati is Jerry Thomas. Everyone else
is gome. With Jacor controlling just about everything in Cincinnati
we have limited programming available. Another screw-up that the FCC
is responable for.

Hi Darius, ...I have to agree with you on the fragmentation issue. I program a small market AOR (KBOY) in Southern Oregon, and see the time coming when we will have to make more of a commitment to either classic rock or new rock. As is, we've been able to bridge the generations, but it's getting tougher. Unfortunately in small markets, classic rock is a safer sell, while harder and more modern rock would most likely get bigger #s...What to do?? 'NEW had no choice but to evolve...how many signals are in NYC, 40-60 or so? It's sad to see "big tent" stations go away. I received an interesting comment from a listener who relocated here from Seattle...(Where I last worked) She said "No stations up there play a variety of Rock...It's either all classic, or it's all hard, or it's all alternative, that's why I like you guys" It was nice to hear...but you wonder how much longer it can happen. Take care bud!

st92j2gl@dunx1.ocs.drexel.edu (Darius Filon) writes:

>There's been a lot of talk lately about how WNEW, while changing their
>positioner, still sounds like the same old station. I drove up that way
>yesterday, and I'd have to agree. However, I still think that they may be
>in the middle of a very very very *gradual* song by song (by song by song
>by song!!) format change.

I started to notice the change, and as a person who listened to the station
each day at work and at home thru the entire 1970's and 1980's, I was
surprised to see them change anything about the station. When Dave
Herman and Ray White were forced out, I knew the station was in for a
shift, but I did not expect what is starting to happen in NY/NJ radio.

>A very reliable source tells me they've been playing Seal, Annie Lennox,
>Boomtown Rats ("I Don't Like Mondays"), Eurythmics, Dream Academy ("Life
>In A Northern Town"), Concrete Blonde ("Joey"), Tori Amos, Modern English
>("I Melt With You"), Motels ("Suddenly Last Summer" & "Only The Lonely"),
>Talk Talk, Blondie ("The Tide Is High"), 'Til Tuesday ("Voices Carry").

I have heard all of the above, they have been playing A LOT of the
early 80's material by Annie Lennox.

>As far as I know, these aren't your typical AOR artists. There *is* a
>real 80s slant though, wouldn't you say?

I think you will see a lot more of this, the vast movements and changes
in music in the 1980's was a milestone, and I would not mind hearing it
all again with a lot of the 70's. This would be a much better array of
music instead of the mess which is rock music today.

>I think it's just a big evolution taking place here. The decline/death of
>AOR, maybe? I think it's a situation like: soon, it'll be two rock formats -

I think it died when major groups started to put out albums that none of its
fans were willing to purchase.

>"Classic Rock" and "The Alternative to Classic Rock" (ie. "New/Modern Rock").

This could mean endless playing of "Aqualung" to endless playing of
Kurt Cobain. What is a format anymore?

>It would seem that all the "traditional" AOR artists are getting by just fine
>on strictly album sales; meanwhile, all the new acts are heading straight for
>modern rock/alternative radio. At most AORs, the percentage of currents that
>are considered "modern/alternative" is probably *at least* 75%. So, they (AOR
>people) probably figure, "Hey, let's just send all the old stuff over to the
>classic rock station, let the 'traditional' artists go with just sales, and

>we'll concentrate solely on the 'New' rock."

Is there any artists who can survive off the formats of the stations at hand? There was a time when airplay on a station like WNEW was critical. It was the best medium to reaching the concert ticket buyer, the album and tape buyer, and of course great for running commericals and ads.

Most stations have no real identity, and real image. Anyone can have a remote, visit a studio or diner or concert hall, nothing is unique.

>When people tune to a certain station these days, they only want to hear *one*
>type of music on that station. Hence, the AORs aren't going to attract the
>younger listeners that they need when, 9 times out of 10, I tune to WNEW or
>WMMR and hear something that wasn't even released in this decade!

K-Rock will do the same for you at certain times, especially when the awful "Greaseman" is not on. Weekends are best in the entire NY/NJ area for hearing cuts not put down in ten years or better.

>To put it simply, there should only be 2 rock formats: "NEW ROCK" and "OLD
>ROCK". What we're seeing in New York is this station giving up on trying
>to attract older listeners, and going, instead, for the younger crowd. I
>think, if it's not already "happening", there's going to be a BIG trend.

I think the radio stations across the board are fighting for EVERY type of listener thay can, especially in this area. You cannot ignore the younger listener as much as you cannot ignore the older.

>I'm not typically a big fan of fragmentation, but it's happening.

It has been occuring for sometime, but has picked up speed.

>Anybody agree/disagree? Am I totally off the wall here??

Well, see above :)

Make sure you look at the ADX by Pacific Recorders. I bought one for my station last year, and although it has had some problems (mainly software bugs) the end result is fantastic. It is also quite easy to learn. One of our primary users picked it up by simply watching those users who had received training.

Craig,

I have worked on the Digi-Design Session 8 , the DSE 7000 and the Roland. I liked all of them. I do production for the ABC/SMN radio network and I have to be able to crank stuff out quickly. I am currently building a studio on my farm and I will be purchasing the AKAI digital editor. It is not PC based (rack mounts in a triple space). It is available in either 4 track or 8 track. It does everything the others do except for reversing tracks. In addition, you can link 4 4-tracks together for 16 tracks, or 4 8-tracks for 32 tracks. The audio is as good or better than anything out there. THe 8 track has a built in 16 channel midi-mixer with pan and digital parametric e.q. on each of the 16 channels. The mixer handles the eight recorded tracks plus up to eight external inputs and it also provides midi sync for REAL production capabilities. There's an available external midi controller/mixer like on the Session 8. The best part is the price. The 4-track retails for $1995 and the 8-track for about $4600. I'll have 16 track digital for the price of the session 8. Good luck in your search.

Val Davis ABC/SMN Classic Rock V/O's

What as breath of fresh air this morning on WRC radio in Washington, D.C. (980 AM) Former Clinton political stratagist Paul Begala is subbing for the regular midmorning host Joel A Spivak. Begala is great!!.. holds his own comfortably against the rightwing wackos calling in who up until now must have thought talk radio belonged only to them..
I only heard snippets on my drive into work and I'm sorry to say tomorrow (wednesday) may be the last day of his stint.
BRING HIM BACK SOON.... WRC!!!

# 1164. West Coast Live - Schedule

Sedge Thomson's West Coast Live
San Francisco's Live Radio Show to the World
Show Schedule
1995 July 19

1. Overview:
2. Dolby Surround Broadcasts:
3. The Upcoming Schedule:
3.1. July 22nd:
3.2. July 29th:
4. Special Offers:
4.1. Internet Free Ticket Offer:
5. Downloading Additional Information:
6. How to Reach West Coast Live:

1. Overview:

This is the weekly schedule for West Coast Live, San Francisco's Live Radio Show to the World (actually just public radio). Each week we give away two free tickets to the live show by a drawing over the Internet. Read below for details.
Live shows are broadcast from the Cowell Theater at Fort Mason in San Francisco, at 10am Saturday mornings.

2. Dolby Surround Broadcasts:

West Coast Live is the only regularly scheduled radio program broadcast in Dolby Surround. Listeners who are equipped with Surround decoders are able to appreciate an audio experience similar to (and sometimes better than) that of an audience member in the Cowell Theater.
For further information about Dolby, listeners are encouraged to telephone Dolby Labs., 8:30am to 5:30pm (Pacific) at (415)558-0200 or e-mail at:

info@dolby.com

Please mention West Coast Live when requesting information, and your name will go into a regular drawing for a Dolby Tee shirt!

3. The Upcoming Schedule:

All seats are reserved, and the best seats go first. Ensure the best seats are yours by calling the office at (415)664-

9500 to make a reservation. The reservation phone is open 24 hours a day. Remember that the best seats go early.

3.1. July 22nd:

* Judy Collins, blue-eyed singer-songwriter and now a novelist.
* Duck's Breath Mystery Theater, the long awaited reunion of Dr. Science, Ian Shoales, Mr. Nifty, and Randy of the Redwoods.
* Kongar-ool Ondar & Paul Pena, Tuvan throat singers.
* L.A. Guitar Quartet, just four guitarists known as LAGQ.
* Julie Smith, mystery writer.

3.2. July 29th:

* Chanticleer, renowned a cappella chorus, with Ensemble Alcatraz with the greatest hits of the 14th century..
* Josh Kornbluth, monologist and aspiring screenwriter.
* Paul Rudnick, a successful screenwriter.
* Sarah Lovett, mystery writer.
* Claire Peaslee, naturalist from Pt. Reyes Bird Observatory.
* True Fiction Magazine, warming up for the big show.

4. Special Offers:

4.1. Internet Free Ticket Offer:

The first person who sends e-mail correcting a spelling error in this mail message will win two (2) free tickets to this week's live show. In case I don't make a spelling error, corrections to grammar will be accepted.

4.1.1. Rules:

The contest begins each week as soon as the moderator sends this notice to the West Coast Live Internet mail list.
Contestants must be subscribed to our Internet mail list.
The winner will be selected based on the time the entry was sent, and no later than 48 hours prior to the live show. In other words, at about 10:00am on Thursday.
The e-mail must be addressed to:

DRAWING@wcl.org

Entries are limited to one entry per person each week.
The winner will be notified by e-mail.
If the winner can't attend this week's show, the winner must assign the tickets to a couple of friends.
The moderator's selection is final.

5. Downloading Additional Information:

To receive an auto-reply containing information about West Coast Live and our Internet presence, send a dummy e-mail message to:

INFO@wcl.org

6. How to Reach West Coast Live:

# 1165. Buffalo/Toronto Radio Watch(7/18)

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: ag365@freenet.Buffalo.EDU
Message-ID: <3uhprc$sim@vixen.cso.uiuc.edu>
Source record: 30401

Reply-To: ag365@freenet.Buffalo.EDU (Carl K. Gorney)

Up & down the dial in the #40 market:

*WUFX has switched its calls to WEDG(103.3,album/modern rock;103.3 the Edge)and were using the new calls this weekend. Its lineup has also changed. The Edge's jock lineup now looks like this:

6-10am:Ted Shred/Tom Ragan
10am-2pm:Rich Wall
2-7pm:Rod Ryan
7pm-mid.:Jason Ginty

Ginty & Ryan move in from weekends,while Wall returns to radio. He had been the host of WBNY(91.3)'s local music show for many years,as well as an executive for Eureka Records(a Canadian-based record label). He's also doing a Sunday night local show,with interviews and music.
Also,the new Edge TV commerical started airing within the past few days. It's a full 30-second commercial;previously,it only aired 15-second spots (at the most).

*WBEN(NewsTalk 930)has a new airborne traffic reporter. Mark Webster,who had done airborne traffic for Metro Traffic(which supplies its service to a number of stations-AM & FM-in the area),now moves into its the station's traffic copter SkyView 930. Also of note:
-Sports director Howard Simon is now at the Buffalo Bills training camp in Fredonia,on the campus of Fredonia State. He's doing his sports reports for Buffalo's Evening News,as well as hosting One on One Sports from there. BEN co-anchor Susan Rose was also there yesterday.
-News director Tim Wenger(who's married to Susan)is now doing weekend reporting duties for WKBW-TV(ch.7,ABC). 'BEN alum Helen Tederous is also at channel 7.

*WWKB(1520,hot talk;The Big 1520)has added Ken Hamblin's show to its lineup. The Entertainment Radio Networks-syndicated show airs from 4-6pm, replacing J.R.& Suzie's quasi-local show(it was done out of their house). BTW,around 6pm(after Hamblin's show ended),a loud tone could be heard for 6 minutes. Apparently,the board op didn't switch to the CNN news feed,which would feed in to Tom Leykis' show about a minute later. After the noise ended, utter silence continued for over 20 minutes.

*Jolene Baller did start up with CKEY(FM 101 The Planet),but not when I said she would-she actually began on-air last week.
Also correction-wise:CJEZ is now known as EZ Rock 97.3 FM,not Easy Rock. They,too,have started a TV ad campaign.

*Stations spotted at the Taste of Buffalo a couple of weekends ago:

-CKEY(FM 101 The Planet)
-River City's WKSE(Kiss 98.5)& WMJQ(Q 102)
-Mercury's WGRF(97 Rock)and WEDG(103.3 the Edge)
-WBLK(93.7)
-WYRK(106.5)
-WNUC(107.7;also 105.3 & 107.3)

# 1166. ALERT: Wed 19 July Vote on CPB Trust Fund appropriation

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: billp@kaiwan.com
Message-ID: <3uhprd$sio@vixen.cso.uiuc.edu>
Source record: 30402

Wednesday July 19 is now set as the date for a vote of the
full House Appropriations Committee on the
Trust for Public Broadcasting
and the accompanying appropriation which will allow
interim funding so that the public broadcasting will
not have to die before the Trust is functional.

Every citizen can participate in a meaningful way at this time
on this issue.

The citizen contacts his or her own representative.
If the citizen's representative is a member of the House Appropriations
Committee, it is only necessary to express support for the Trust and
its appropriation.

If the citizen's representative is not an Appropriations Committee member,
then the citizen should urge the representative to express the same
concern to Committee members s/he knows or can contact.

Understand the flow so far on this issue. The appropriate subcommittee
(listed below) voted last week to approve the proposal. It was nearly
derailed by a 2:30 AM action by one republican representative.
We have to thank those of our Representatives who gave up their sleep
to stay there to head off this attempt to kill public broadcasting.
Wednesday the full Commitee makes its vote. We don't know whether
additional legislation will be introduced at that time.

If the full Committee passes it, the full House may (we will have
another fight at that time). If the full Committee does NOT pass it
there will be no chance later.

This is the Fund which will help the survival of NPR, PBS, Pacifica,
ITVS, Soundprint, and PRI.

If any of those perform a service of value to you, this is the time to act.

This is one of the FEW times that direct citizen action is the most
important forces on the political scene! Elections are an iffy thing.

Right before the vote -- you, the citizen, are more powerful than all
the lobbyists and all the corporations. Take your power.

-bill

# 1167. Chicago Radio Watch:Spring Arbs

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: JJB92@aol.com
Message-ID: <3uhpre$sip@vixen.cso.uiuc.edu>
Source record: 30403
Cross-posted to: rec.radio.broadcasting,chi.media

The happy numbers are in...here is what is working in Chicago and what is not. I included the winter ratings for comparison purposes. The following is for the 12 year old plus demo for the spring rating period-March 30 through June 21, 1995.

WGCI-FM (urban contemporary) 6.0 6.4
WGN (talk) 5.8 7.1
WUSN(country) 4.7 4.3
WMAQ (news, Sox, Bulls) 4.0 3.6
WVAZ(urb. adult contemp) 3.9 3.9
WBBM-FM (top 40/dance) 3.9 4.0
WLIT (light favorites) 3.9 4.1
WJMK(oldies) 3.8 3.4
WKQX (alternative rock) 3.8 3.7
WBBM-AM (news) 3.8 3.4
WNUA (smooth jazz) 3.5 3.2
WRCX (rock) 3.1 3.0
WXRT (progressive rock) 3.1 2.8
WLS-AM (talk) 3.1 2.9
WOJO-FM (Spanish language) 3.0 2.7
WLUP (entertaining talk) 2.4 3.2
WEJM-FM (rap) 2.3 1.9
WTMX (light rock) 2.1 2.4
WCKG (classic rock) 2.1 2.3
WPNT (light rock 70,80,90) 2.1 1.9
WYSY (70's) 2.1 1.7
WAIT (big band) 1.8 2.4
WSCR (sports talk) 1.8 1.6
WNIB (classical/jazz) 1.7 2.0
WFMT (classial) 1.5 1.3
WGCI-AM (oldies) 1.4 1.4
WMVP (sports talk) 1.3 1.2
WIND (spanish talk) 1.2 1.1
WJJD (talk) 1.0 1.1
WTAQ (spanish language) 0.9 0.6
WVON-AM (talk) 0.6 0.6
WLS-FM (talk) 0.6 0.7
WYCA (gospel) 0.6 0.6

Winners and Losers:

While dropping to a "mere" 9.9 share, Bob Collins on WGN continues to lead the pack in morning radio. Bob dropped from 11.7 share in the winter but still more than doubles his nearest personality competition-WGCI's Tom

Joyner who scored a 4.7, down from a 5.6 in the Winter book.

Mancow Muller continues his impressive ascent in the morning rating game. Mancow has seen his ratings increase from 3.3 to 3.8 to a 4.2 share, good for 5th place in the morning race.

Steve Dahl and Bruce Wolf scored a 3.0 share which was good for 12th place in the market. When one considers that the station-WMVP- only pulls 1.3 share, it sends a clear message that Steve and Bruce are doing an impressive job in the mornings. Without Steve and Bruce, MVP would be lucky to score a 1 share.

Howard Stern scored a 2.2 share during his first rating book on WCKG. That was an increase from the Patty Haze morning drive which mainly featured bad repetitive music and scored a 1.8.

And we still can't get enough O.J.: Bouyed by a strong performance by the afternoon trial of O.J. Simpson and improved morning drive numbers from Pat Cassidy and Jay Congdon, WMAQ increased their share to a 4.0 from 3.6 in the Winter book.

What goes around, comes around. John "Records" Landecker, who held court evenings on WLS-AM during the 70's shot up to a 3.3 share on oldiesough O.J.: Bouyed by a strong performance by the
afternoon trial of O.J. Simpson and improved morning drive numbers from Pat Cassidy and Jay Congdon, WMAQ increased their share to a 4.0 from 3.6 in the Winter book.

What goes around, comes around. John "Records" Landecker, who held court evenings on WLS-AM during the 70's shot up to a 3.3 share on oldies WJMK. John improved on his 2.6 share from the winter book.

Robert Chase, who held down the morning slot on WKQX for most of the rating period moved up to a 3.1 share-good for a tenth place finish. His reward? Moved back to evenings to make space for "Lance and Stoli" mornings on Q 101. Perhaps the bosses at KQX brought in the "brains" from WLS or WJJD for consultation on the move.

Losers:
Has anyone seen Kevin Matthews? Once a fixture in the morning drive slot, WLUP failed to place its morning show in the top ten for the second consecutive book.

While you are looking for Kev, see if you can dig up the so-called "Wise-Cracks" who hold court on WBBM-FM. Terry Jacobs and Bill Cody tumbled out of the top ten. Honchos at CBS can't be happy about that. Makes one wonder if the bigwigs yearn for the Eddie and JoeBo years.

Ian Punnett, WGN's attempt to appeal to those who do not require the assistance of a cane, dropped out of sight of the top ten in the afternoon drive. Ian who had moved up to a 4.5 share in the Winter, fell below a 3.5. We can't be too hard on Ian however. Cub baseball returned to the airwaves during the period.

Maybe people are tired of Johnny in LA: Johnathon Brandmeier moved down from a 5.4 to a 3.9 afternoons on WLUP.

WJJD, Chicago's "hot talk" station did what was thought to be the impossible-they declined even further from their dismal 1.1 share. The station now pulls an impressive 1.0 share. Let's see-we will dump big band which pulled a 2.3 for syndicated talk (except for morning show with Ed Vrdolyak and Ty Wansley) which Chicago has rejected time after time. Yeah-good idea. Pretty soon, WLS will want to hire us.

Speaking of WLS, Drew and Tommy, the dynamic duo who run WLS-AM and FM, pulled the plug on the FM side. The station scored an embarrasing 0.6 share. The station returned to simulcasting its AM signal on the FM dial in late May.

Station versus station results:

News: WMAQ continues to hold its lead over rival WBBM-AM. While trailing in the morning drive, MAQ was no doubt helped by the return of Michael Jordan. Both stations enjoyed an improving book versue winter results.

Sports talk: WSCR, the fiesty, daytime sports talker expanded its lead over WMVP. SCR scored a 1.8 share, up from 1.6 beat MVP's 50,000 watt signal. MVP pulled a 1.3, up slightly from a 1.2. However, Steve and Bruce gave Tom Shaer (mornings along with Jim Memolo) what he deserves-a solid beating during the morning drive. Here's to hoping SCR management gives Jim Memolo a fighting chance by removing Tom from the morning show.

Classical music: WNIB continues to lead WFMT although the gap narrowed: 1.7 vs 1.5.

Adult contemporary: WLIT continues to lap the competition, scoring a 3.9 share. WTMX continues to fade into oblivion with a 2.1 share. WPNT saw a slight uptick to a 2.1 share.

Rock in all of its forms: WKQX continues to lead the pack with a 3.8 share. WXRT, a model of consistency over the years when it comes to ratings scored a 3.1 share. WRCX, carried by Mancow also posted a 3.1 share. Hard to believe but true: WLUP tumbled to a 2.4 from a 3.2.

Fans of the same songs over and over and over and over gave WCKG a 2.1 share. WYSY, all 70's all the time, matched that mark.

Finally, a further sign that the Apocalypse is upon us: Don Wade and Roma, a married couple who pretend they are not, mornings on talker WLS-AM scored a 3.4 share . While this is down slightly from the 3.7 share in the winter, it certainly doesn't give me much hope for the intelligence of mankind.

Ratings were courtesy of the Chicago Sun Times. Caustic comments are my own.

# 1168. DENVER RADIO WATCH/ KALC

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: Jon Jacobs <jonj@snark.wizard.com>
Message-ID: <3uhprf$siq@vixen.cso.uiuc.edu>
Source record: 30404

Not much going on in the Denver market - except at KALC/ Alice 106 --
Chris Davis was taken off the air, but is still with Secret Comm.
(Actually - I don;t know if he was 'taken off') Word is - Chris is
working on building the stations Web site and doing 'computer work' for
ALICE and KIMN. Now on Mid-days is Mary 'Cha-Cha' Chavez and replacing
Mary on nights is Ethen.

Jon "Fill-Jock" Jacobs
(*Available for lease*)(-just working setting up an Internet Web Site for
concert and sporting events - cgheck out the prelim. stages -
http://www.wizard.com/~jonj/tickets.html)

btw, anyone in SLC - have tapes of Alan Kabel/Mornings?

# 1169. Proposed Group W/CBS Merger

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: ap048@lafn.org
Message-ID: <3uhprg$sis@vixen.cso.uiuc.edu>
Source record: 30405

Reply-To: ap048@lafn.org (Donald Paschal)

This morning, it was announce that Westinghouse(Group W)was going to
Chemical Bank to see if they can finance a purchase of CBS, Inc.

CBS has been on the block for years, and I do believe that the radio
network is very profitable, so a purchase won't result in the horrible
situation that has occurred when NBC spun off its radio networks to
Westwood One.

The question is, since both CBS and Group W are active in many markets,
if the merger goes ahead, what stations would the combined company sell off.

My LA prediction: All-news KFWB-AM/980 will go first.

## 1172. New England Radio Watcher: $306 million later...

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3uhprj$sj3@vixen.cso.uiuc.edu>
Source record: 30408

*The winning bidder for Pyramid Broadcasting was revealed today...
and it's Evergreen. The $306 million dollar deal closes a chapter
that began when Cecil Heftel and Richie Balsbaugh bought a decrepit
AM-FM combo, WHIL Medford MA, and took the FM from worst to first
as disco WXKS-FM, "Kiss 108." Kiss eventually went CHR, and
Heftel cashed out, leaving Balsbaugh in control. Pyramid
picked up rival WJMN-FM, "Jam'n 94.5," from Ardman a couple
of years ago. The Pyramid portfolio also includes WNUA-FM Chicago,
WHTT AM-FM/WSJZ Buffalo, WRFX AM-FM/WEDJ Charlotte, and WYXR/WJJZ
Philadelphia. Now they join forces with Evergreen to give
the Dallas-based company stations in each of the top 10 markets..
the first time that's ever been done. Evergreen is new to
Boston, and to Charlotte, Buffalo, and Philly as well...but
Chicago is another story. Evergreen already had WEJM AM/FM,
WVAZ-FM, WLUP-FM, WRCX-FM, and WMVP-AM, under a waiver from
their merger with Broadcasting Partners. Now they end up with
*5* FMs and 2 AMs...it will be interesting to see whether they
sell or try for a waiver and wait for dereg. I'd bet Gannett is
drooling for the chance to add either WEJM or WVAZ to its WGCI
AM/FM combo...and I'm guessing Group W would like one of those
FMs to add to its 3-station group in the Windy City. Viacom,
Emmis, CapCities/ABC, and CBS are other single-FM operators
who might want a duopoly.

The ramifications here in Boston? Fewer locally-owned stations,
for starters. The deal leaves just a few stations locally-owned:
WBNW-AM (Back Bay), WRKO/WEEI/WEGQ/WBMX (American Radio Systems),
WJIB-AM (Bob Bittner), WROL-AM (Carter), WILD-AM (Nash),
and suburban AMs WESX, WJDA, WADN, WRCA, and WNTN. It also leaves
Evergreen with an interesting question: Do they keep running two
FMs with similar formats? Kiss 108 trends towards the dance side
of CHR, while Jam'n 94.5 looks towards the CHurban end of the
format...but there's a lot of overlap. Might Evergreen try to
consolidate that audience on one of the two stations, perhaps
the fast-rising Jam'n, and flip the other to something else --
maybe modern rock or FM talk? And what of little WXKS-AM 1430?
It's been satellite standards for more than a decade..and it
has a decent 5kw ND day signal, but its 1kw night pattern is
very directional away from Boston. Will Evergreen keep it
as is? Or could it be duopoly fodder for Salem Media (WEZE-1260)
or Communicom (WNRB-1510)? To be continued...

*Why we love the Boston Globe: Because of their continuing
quest for accuracy, of course! The latest offender...a Susan
Bickelhaupt column on cable radio last week that went on at

length about a certain Chicago classical station, "WFMT (93.3)" (sic). Uh, Susan? Do you make these things up? Oh, guess so...the next item mentions a Spanish-language station, "WNNW-FM (Lowell)"...which I guess must somehow be related to WNNW *AM* 1110 a dozen miles away in Salem NH. Hey, who needs accuracy when you're a Major Metropolitan Daily, right? That's what we little guys are here for :-)

*On the road: Took a quick spin through RI and down to southeastern Connecticut last weekend...and visited the transmitter site of WWRX (103.7, Westerly RI) and WDGE (99.7, Wakefield RI). It's a tough one to get to... located down a VERY long one-lane dirt-and-big-rocks road. But it does get out...WWRX is listenable here in Waltham MA, 65+ miles away, and WDGE's class A signal gets out well into Providence, 20 miles or so away. The site's on New London Turnpike south of rt. 165 in Exeter RI, BTW. WDGE is programmed by Jacobs Media with a no-DJs (as of yet) "Edge" format.

*Really on the road: Anyone else headed for the Decalcomania convention in E. Brunswick NJ July 28-30, or the WTFDA gathering in Lake Placid NY August 4-6? See you there...

A couple of footnotes from Friday's round-up:

>http://www.xtrasports.com/ . What is missing?
>e.mail response.

I wrote that XETRA-AM [XTRA Sports 690] added a "great" web-page but with no e.mail reponse. I received an e.mail from the vice-president of Nobel, Howard Freedman - VP/Programming and Operations, and an e.mail response has been added. It works too! When asked if the new seven-tower array is operational, the reply is "by Sept. 1." It's promised to be at 77kw! Popular afternoon host, Jim Rome, is now syndicated across the country. Note that his number at the LA studio is "800-470-SMAK." Also: KWNK 670, Simi Valley was confirmed to be in the Nobel broadcasting group. mailto:feedback@xtrasports.com

>Imus has reportedly signed a LA station to host his
>morning show.

I have heard from another source [and not a janitor, but someone in management] that Don Imus "might be in at KMPC." Imus, who is on record that he doesn't want to go against his friend, Robert W. Morgan in the morning drive time. The annoucement could be as early as this week. No word if Art Bell will fill the night at the CapCities/ABC station.

XETIN and KOJY have started the San Diego/Los Angeles news connection this morning. Both stations are at 540. See the post about reception in North County San Diego.

Long time readers will know about my praise on KKOS, Carlsbad [95.9]. The AAA station _played_ a great mix, and it _was_ "my station" of choice. Enter new program director Sherman Cohen, formally at XHRM [92.5 "the Flash.] I had this in the e.mail box this morning:

=----------
"KKOS is in turmoil, Sherman Cohen is an asshole [kkos staffer] the jocks hate the changes and the listeners are feeling abandoned. The music has gotten predictable and the passion is lost"
+----------

The above is true. :-( The moniker is either "diversified" or "progressive" KKOS, with "Long Music Sets." Gone are the great interlude with the traffic reports, folksy weather casts, and the usual banter that made the station "local." Sherman, if you

are reading this, please e.mail me. I can share more electrons with
you from other [upset] listeners!!

Los Angeles/Orange County numbers will be posted today!

## 1174. A.M. Fidelity

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: SNOWMAN <jlsnow@fcseng.frco.com>
Message-ID: <3uhprl$sj7@vixen.cso.uiuc.edu>
Source record: 30410

I was doing a bit of shopping for a new car over the weekend. I was struck with the fact that I saw no Amax car radios. No A.M. stereo. Just normal narrow-banded lousey AM radios. If broadcasters have trouble selling AM, it's partially because a large portion of the public identifies AM with low fidelity. We all know it doesn't have to be nearly as bad as it usually is. New broader banded radios are available ( the GE super radio iii for example). But the car is where a lot of people listen to the radio. And when car radios have trashy AM sections, people naturally get the wrong idea. HWhy hasn't NAB pressured the auto manufacturers into supplying better quality AM radios. It can't be an issue of cost because a simple matter of changing the filter cutoff frequency would make all the difference in the world. I think I remember the car radios in the fifties having more trebble. Then, when FM came online, suddenly the AM sections in car radios sucked. Conspiracy??? HMMM... Naaaaah.

Unfortunately there doesn't seem to be a card that gets AM.
Perhaps a computer controlled IR transmitter could be used
to control an external tuner??

Reply-To: thorburn@.xyplex.com

What ever happened to the "AMAX" standard for wide-band, quality AM ?
As I understand, this was a cooperative effort between radio manu-
facturers and AM broadcasters to come up with a standard to improve
AM broadcast receivers. It went beyond just AM stereo.

Apart from a low-end Sony walkman model (WMF-42) I have not seen any
products which claim to adhere to the AMAX standard. Is this
effort still alive?

Hi Todd...
I'm an old (and getting older) Willamette Valley AOR broadcast vet who spent a total of some 15 years, hmmm, maybe more, down in Eugene. I enjoyed over ten years in AM Drive at KZEL-FM and reached #1 12plus in the mid-late 70's. I was invited to Seattle in '79 and off I went to work KZAM in Bellevue and later KISW, which became #1 12plus, while I was there...but I've really missed the 'glory years' in Eugene ever since. Although I returned a few times to The Emerald Empire (KRXX, KLCX,KZEL again, and KAVE) it never really felt the same again.
The early daze in Eugene were much like a dream. The town was still a 'town,' lots of rain and plenty of freedom both on and off air. At early KZEL there were no playlists...only a growing record library of thousands and thousands of albums (remember them)? Social and political concerns were often the subjects of comments and sets of related music were often designed to accent such concerns. Vietnam, Affirmative Action, Racism, and of course good old Uncle Sam! Great days on-air! I guess it'll never be the same.
I'm a weekender at KZOK in Seattle now (Classic Rock) and have a friend who just took over as PD at 'Earth 105' in Portland. He tells me he's not familiar with the 'Oregon' lifestyle but realizes it's different. He's looking at some severe competition from KINK, KGON and KUFO but he's looking forward to a good fight.
I wish I know more about Lebanon et al but I'll ask around and let you know if I hear anything. A pleasure to hear from another 'Valley' broadcaster. Oh, some guy left me a message saying I had to use 'a' official sounding name while using this message board? OK: My name is 'John' Proscribe...How's that, dude? Hey Todd, keep in touch 'cuz Pacific Northwest Rock (Alternative included) is a real interest to me.

# 1178. Bill Rapley 1931-1995

BILL RAPLEY
21 MAY 1931 - 14 JULY 1995

HCJB World Radio missionary William G Rapley passed away Friday evening, 14 July 1995, of an apparent heart attack. He was enjoying an evening of fellowship at his church BBQ when he collapsed. Bill leaves behind his wife Beryl and three adult children.

For the past nine years Bill has served as an engineer at HCJB's UK office and studios in Bradford, West Yorkshire. He is best known to radio listeners worldwide as the host of "Blues, Rags and All that Jazz", a weekly, half-hour programme featuring his favourite music along with a gentle gospel message. The programme is broadcast from HCJB in Ecuador and other stations around the globe. It has been consistently listed as one of the top 10 programmes on shortwave radio by the Passport to Worldband Radio, an international publication.

Bill studied engineering at Woolwich Technical College in the late 1940s, and at the British Broadcasting Corporation in the early 1950s. He worked as a radio operator for the British Air Force from 1950- 1953, then spent 29 years as an engineer with the BBC. Bill and Beryl joined HCJB World Radio in 1982 and spent four years working at the mission's Italian office and studios, helping establish and sustain local Christian stations throughout the country. Since 1986, they have worked in the UK office.

The funeral will be held at 12.30 pm on Wednesday, 19 July, at Sandy Lane Baptist Church, where the Rapleys have been active members. Those wishing to encourage Beryl may write to her at: 84 Dalecroft Rise, Allerton, West Yorkshire BD15 9AX, England.

>
>I was in college in Amherst, MA during the 1965 blackout, and I seem to
>remember at least one station in Springfield claiming that they were
>operating as part of the Emergency Broadcast System. I don't know much
>about the EBS, but this didn't seem to be kosher.

I don't know about 1965, but more recently, I believe the EBS could be
activated by (1) the President/feds, (2) state officials, or (3) local
authorities. So they can use it even for a tornado or flood.

While a blackout might not be life-threatening enough to warrant EBS, it
was widespread enough so the central coordination of services might help.

I once read that there was an average of around 150 EBS activations
annually.

Regards,
Andy

[Moderator's Note: Our regional EBS primary, KTTS-FM routinely uses
its EBS tones to trigger their "Storm Alert Radios" whenever
threatening weather is present. They have been known to send tones
many times per hour (sometimes every few minutes) preceding local
weather alerts. Bill]

## 1180. Top T40 radio stations

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: TRRadio@aol.com
Message-ID: <3uhprr$sjh@vixen.cso.uiuc.edu>
Source record: 30416

I found this in the usenet newsgroup alt.rock-n-roll.oldies

>Subject: Greatest Top 40 Stations of all time
>From: yeauxbreau@aol.com (Yeauxbreau)

A group called DecalcoMania, dedicated to radio memorabilia, held a poll to determine the best Top 40 radio stations of the rock'n'roll era. I don't have the complete list, as I don't belong to the group. But here's their Top 10 of the Top 40:

1. WABC New York 1960-1982
2. WLS Chicago 1960-1980s
3. KHJ Los Angeles 1965-1979
4. WCFL Chicago 1965-1976
5. CKLW Windsor (Detroit) 1960s-1970s
6. WKBW Buffalo 1960-1977
7. KFRC San Francisco 1966-1980s
8. WMCA New York 1960s-1970
9. WCBS-FM New York 1970s-present
10. WFIL Philadelphia 1966-1970s

So, waddya think about this????

Tripp Rogers

# 1181. Re: Becoming a DJ?

Newsgroup: rec.radio.broadcasting

Message-ID: <3uhprt$sjj@vixen.cso.uiuc.edu>
Source record: 30417

In article <3uelph$mjn@sundog.tiac.net>, mpaolini@tiac.net (Matt Paolini) writes:

>Should I get a degree in communications?

As a holder of a BA in Communications, I would reccomend college as a good general learning and growing experience for anyone. But a communications degree is probably less valuable than any work you might do at a college radio station, and is an altogether useless BA for any kind of entry-level work in radio programming.

> What does it take to become a DJ, etc? How would I become an intern?

The second question is, in part, and answer to your first. Exposure to the work gives you an opportunity to see if this is what you want to do. Again, a college or university with a student-run radio station is a great place to start. Some commercial radio stations will allow you to work for them as an unpaid intern, but many require a connection to schooling.Otherwise look for a station that has a smaller staff, and might welcome some help. Expect to do menial tasks, but use the time to soak -up as much information as possible on EVERYTHING about working in radio; i.e., news, production, traffic logs, engineering, and all the other elements besides spinning CD's and talkin' cool...

>Or is it just too competitive?

Yes, and no. The "glamour" of radio from the listener side of the speaker makes alot of people think they want the job. Most haven't the stamina or the ability to deal with graveyard shifts, low pay, and unpredictable management - the things everyone experiences when entering the business. But the funny thing is, the really talented people can make it, with perserverance and a few good breaks.

So, if you want to try radio, try working in it. Find a college station or a small local commercial outlet, and experience the business firsthand. Take those college classes, but do it to expand your mind, not to train for a trade in broadcasting, because it takes a good thinker to be a good communicator, and that's what you'll need to be to make it in radio.

Good Luck,

Bob Seybold

>too competitive? I just want some general information
>concerning this subject...
>
> Thanx for your time...
> Matt Paolini

Matt:

The first thing you learn when you become a DJ is dedication and hard work. Be ready to give up weekends, dates, Thanksgiving & Christmas Morning. I never went to school for broadcasting, I started fresh out of High School, but I always knew what I wanted to do. If school is an option than I would suggest a course in engineering or computers or some other electronics...this way you have something to fall back on if you fail at DJ'ing or the salary you get is not enough. The best thing to do is "get in somewhere!" Find a station that needs a Sunday morning countdown run or public affairs program, then when you are done with your shift go into the Production room and practice, make a tape and give it to the PD every week, this way he knows you really want to be on the air!
The broadcast business can be unstable at times and we are always in ratings.....one minute you could be doing Top40 and the next morning the station might decide to go Country! Remember: not everyone is a Howard Stern or Don Imus.....
Best of LUCK and if I can help let me know.....

Hi Matt,

People become DJs not because the WANT to, but because they HAVE to. I was one for 17 years. It was the best of times, it was the worst of times....

The usual scenario is to get some training, get your first job in some small market, then work your way into the large markets.

It ain't like it was when I did it, and it won't be like it is now later on.

As with any LIFE thing, you put everything you've got into it and then some, and if you're lucky, you get most of it back.

Regards,

Ty Ford

: The combining of stations within a single market serves to reduce costs.
: First, the use of a common managment orgainzation; second, the combining
: of studio facilites; third, a common techinal staff; fourth, a common
: sales and billing staff.

I don't disagree with this point at all. In fact, it is the way it should be. My employer, Telmedia, owns QWK Rock; a State College based station, relayed for the Johnstown area w/local spots; and Power 92 (my station), the local CHR, which may also be relayed into the State College area.

However, despite the sharing of location of sales staffs in our office, we STILL maintain 2 separate receptionists, 2 separate (and large) sales staffs, sharing only the GM and copy-writer.

This is ridiculous, because, as you say, a duopoly is the perfect way to save money. In fact, we are supposed to have a Johnstown QWK Rock studio, but all the room does is sit there with an old cart machine, and the board opened. No mics. No CD players. It's been this way since we moved into the new building in October - because they don't have the money!

What money?

I'm not sure that there were "profiteers" in the sense you are thinking.

In the case of one deal I am bailing out, the people who lost money were the shareholders of a bank in Rhode Island who loaned millions to a guy in Arkansas so he could buy three stations in Muskogee, Oklahoma, two of which were losing money by the bucketfull.

The people who sold the stations did OK, but they had owned them for years.

The Arkansan goes bankrupt, the bank's shareholders lose a million dollars and I'm picking up the pieces with a lot less money invested.

The losers here were the ones who made the stupid investment--the bank in Rhode Island. Nobody told them to go make large loans on radio stations in secondary markets in Oklahoma when they should have been making mortgage and car loans in the Northeast. They were greedy. And they paid the penalty.

Each deal is different, but the people who usually get stuck are the folks who finance bad deals.

And that is as it should be.

I just don't know of too many sellers who made a lot of money in the late 1980's.

There are exceptions, but they are generally because the deals were fundementally sound in the first place.

Generally, John Rockefeller was right. When the shoeshine boys are giving stock tips, it's time to get out of the market. And when you see limited partnerships of San Diego dentists buying radio stations in
Arkansas or Rhode Island Banks financing radio stations in Oklahoma, it's time for professional radio investors to wait for the inevitable crash so we can go about our business.

It did, we did and now, we're facing some new realities, both technological and otherwise.

But that doesn't mean we need to run our properties for the benefit of the employees. We still have to make money or there will be no employees.

Tim...
'John' Proscribe here in Seattle. Brew is a fine, fine fellow. A good 'human' type.
You know, a rare compassionate PD who lives and breaths 'great' radio.
I've worked with him a couple of times in smaller markets; Lewiston, Idaho and Bellingham, Wa. but he is best known for a remarkable job as PD at KXRX in Seattle. For a couple of years in the early 90's he single handedly brought in every major AOR talent in the city and became legendary while doing so. He programmed 'The X' to bring in consistent sets of phenominal numbers and while doing so garnered a great deal of respect from everyone in the broadcast community -- both friend and foe.
I'm currently involved at KZOK (Classic Rock) here in Seattle but must admit that down the road a few months I might be looking to 'connect' with Earth 105 because and only because of BREW MICHAELS. Portland's a great town in an even greater state but BREW is among the best PD's around.
He's got a real challenge coming up. KINK, KGON and KUFO are among just a few potential problems for him. He'll need to hear from only the best!
His address follows. Send a cover letter, recent Air check and resume to
BREW MICHAELS
804 207th Avenue, NE
Redmond, Washington 98053
I have a feeling that working for Earth 105 will be a truly fun experience, if not rewarding in more ways than most of us here in the Pacific Northwest are used to!

>currently in stores cover the expanded AM band? Seems that they would,
>since the band is already in use elsewhere in the world.

Really? The MW listings in the 95 WRTH seem to stop at 1602, not 1701.
The 1620-1700 band was only recently cleared out.

As for radios, my Sony analog radios go up to 1700 as does the
Superradio III. The Sony STR-D390 receiver and Denon TU680NAB
get the high band also. But the Bose AM stereo in my 90 Nissan
and all of my sony digital portables stop at 1610 or so. Of
course the portables go higher, but on shortwave.

The station I'm listening to right now just ran their ID. It
went something like this...

ATTENTION... ATTENTION... This is the LEGAL ID... ATTENTION...
ATTENTION... Whether you're in your car or at home, this is KOTR,
Cambria, San Luis Obispo... You can relax now.

Harold

# 1190. Free Money !

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: Dusty Rhodes <dusty@iol.ie>
Message-ID: <3uhps6$skb@vixen.cso.uiuc.edu>
Source record: 30426

I'm writing from Dublin the capital city of Ireland where we have (wait for this) 2 local commercial radio stations, Classic Hits 98FM and FM 104. For years 98 has been the market leader and almost since they signed on they've been running a cash call contest. You know, they call out a cash total each hour, if they call you during the hour and you know the total you win the money etc...

Well 104 have decided to use this contest to their advantage. They are currently running a promo saying if 98FM call, put them on hold, call us and we'll give you the total !!! Win their money and you don't even have to listen !!

It's still to be decided whether or not this will work for 104. They are blatantly plugging the competition, it says nothing about what 104 do on air etc but perhaps it will appeal to some listeners sense of fun.

I know this has been done before but its a good excuse to ask for any good promotions/radio battle stories you may have done/heard in your area. If you have, please drop me a line (dusty@iol.ie).

>head making you listen to it, so play your 78's and stop whining.

To listen or not to listen is not the point. I'm not judging or debating the value of the programming; I'm simply suggesting that it not be called "Smooth Jazz" when a large portion of the music played is NOT JAZZ by any stretch of the imagination.

No argument there. But how do you put Anita Baker in the same category as Anita O'Day? Or Kenny G in with John Coltrane? Puh-leeze! I don't care what they play. I just wish people didn't think of it as jazz.

> I believe that a more
> straight-ahead jazz format could also work, if it were done right,
> promoted, researched, and presented on a clear strong FM signal by
> someone with deep enough pockets to really give it time to establish
> itself.

It did work, in San Francisco, for about 30 years, until the guy who owned the station (KJAZ) got up to his eyeballs into the bubble real estate market and it collapsed, forcing him to dispose of a station that was, I've been told, modestly profitable. And it wasn't even a strong signal.

But even a long-time owner would have trouble justifying a straight-ahead jazz format on purely business terms, given economic reality. I've heard that Saul Levine quintupled his cash flow when he flipped KKGO in Los Angeles from jazz to classical. (and that IS a strong signal).

BTW, Levine has put jazz on his AM station in Marin County (across the Golden Gate bridge from San Francisco), but on my last trip to San Francisco I found the signal in the southern and downtown parts of the City to be unlistenable. It's on 1510, a 1kw daytimer I think, and now bears the call letters KNOB ("the jazz knob"). He also has a co-located FM that went classical, and picked up the KKHI call letters, when the old KKHI became KPIX AM/FM. It would thus appear that he made the business judgment that it is better to have the second classical FM in that market than to have the only straight-ahead jazz FM. (Speaking here of commercial stations only, of course).

If only I could make a living playing jazz on the radio, I'd give up doing news.

Organization: Bitstream Underground

>Smooth Vocals + Contemporary Jazz = Smooth Jazz

Smooth Vocals (Luther, Anita, etc). Contemporary Jazz (David Sanborn, Lee Ritenour, etc.)

Think about any "type" of music and they all have some sort of adjective in front of them...(classical, neo-classical, ac, hot ac...)<

Since in this use, "smooth" is a modifier of "jazz"...I don't think so. It's a misnomer. What really is smooth jazz? It's "happy jazz"...jazz with no hard edges...an original American music genre with its heart and soul ripped out. Did I say I didn't like it? No. But that's what it is.

Why do many rally against this description? Because it's just wrong. Then everyone starts thinking this is jazz, just like everyone seems to think talk is "bad" as a result of the "Less Talk, More Music" propaganda. (Though the latter is more dangerous, for it sets up DMX and the like to be all the more acceptable. See what we've done now?)

Doc Searls (searls@batnet.com) wrote:

: The magnificent KPIG at 107 -oink- 5, licensed to Freedom, CA and serving
: the Santa Cruz/Salinas/Monterey Bay area from studios in Watsonville, has
: been sold to Elletra Broadcasting, owned by Ken Dennis.

: The KPIG people say the sale will go through in September and the format
: will remain the same.
.....(great information deleted).....
I am glad that KPIG's format will remain (I hope). I listened to both
KFAT and KHIP when I lived on the Monterey area. But, history does have
a habit of repeating itself. In 25 years the first thing new owners do
is to fire Travus T. Hipp. I remember that KOH (Reno circa '83) did not
change format, new owners took over Friday afternoon and Saturday morning
Travus was fired. Seems to me, people buy great radio station just to fire
the Hippster (no I'm not paranoid <g>). I hope that everything *will* remain
the same, and that the net link stays in place too. The link is all I have of
KFAT memories in Seattle, and besides I'd have to edit my home page again.

Reply-To: dtebbe@aol.com (D Tebbe)

It was good to hear that KRES / KWIX suffered no damage during the recent tornados that ravaged Moberly, MO. KRES is a blueprint for full service radio. I grew up in Central Missouri and KRES was THE station during severe weather. They dropped all other programming and made sure that we all stayed clear of harms way. Where radar left off, "weater watchers" phoned in. You can bet many lives have been saved by thier excellent service. Best off all they use thier 100,000 watt signal for what it was designed for, to serve ALL who hear it, not just some city they want to sell advertising in. Hats off to all the people who make this station what it is.....a darn good one.

Wanted! Public radio stations to become affiliates of the new
Music Showcase TV show. The show is starting on PA (Public Access)
TV and will feature diverse forms of music (no RAP or Heavy Metal).
No cost to become an affiliate and you receive FREE music to play
on your station, music that was selected by our panel for airing
on our TV show. This is non-commercial and we are going to be
airing this one hour weekly show across the nation on PA TV and
college radio stations. Now the aspiring band, singer and songwriters
have a place to showcase original music without having to go through
the major lables and Indy labels.

AND

New TV show called Music Showcase is currently producing a
pilot and looking for many types of music to showcase
(no RAP or Heavy Matal). We accept video's, CD's and audio
tapes. Submit a package on your band or if a singer or songwriter
on yourself to:

L.D. Bobbitt
Music Showcase
515 S. Virginia St.
Suite 235

Message-ID: <3uhpso$sl3@vixen.cso.uiuc.edu>
Source record: 30442

There have been some recent minor changes in the radio scene here in Portland. WCSO/WLPZ are now a part of a duopoly having been recently acquired by WHOM's parent, Barnstable Communications. Rumor has it that WHOM's studios will eventually end up at WCSO (Ocean 98) on Warren Ave near the ME Tpke and BJ's Wharehouse. I have also heard, uncomfirmed, that WZPK in Berlin, NH is also owned by the group. This station gets a grade a signal in Portland with its tower on Mt Washington. WLPZ is reportedly keeping its all sports format with Red Sox broadcasts.

WCLZ AM in Brunswick is now the Consumer Value Shopping Channel and no longer simulcasts WCLZ FM. The station sells through its local number discount coupons to various merchants around the area. For example, a $20 restaurant gift certificate can be purchased for $14. The Consumer Value Minute has been an integral part of WCLZ FM's advertising for over a year.

Scott, I'm glad you appreciate the two stations that I listen to 95% of the time. They are both AAA with WCLZ playing more lesser known music. Both stations have made great strides in recent books at the expense of more established rockers like WBLM and especially WMGX.

I love it.

You guys bitch about duopolies and you bitch about not being able to add more stations. To quote David Fry quoting Richard Nixon ("I AM the President"):

"Some people believe in instant integration. Some people favor segregation forever. I, myself, favor a third more moderate course--instant forever."

First, the idea of 9k spacing is not to allow more stations on the band. It is to conserve spectrum. I don't have any fundemental problem with lots of stations. But we have that now and people keep complaining about us taking jobs away when we need to make cutbacks.

Second, I would suggest that the complaints did not come from the NAB but from those of us who would correctly forsee the difficulties of changing a system of arcane engineering which, unfortunately, we have been stuck with for 40 years. Look at the problems we're having with the expanded band and you will instinctively know why going to 9k wouldn't work.

Our problem now is twofold on am. First, we have created too much ambient interference on the band because of poor engineering practices. The AM band is only marginally better than CB Channel 19.

Second, we have an engineering structure which in many cases makes no sense. A much better proposal would be to limit all am power to 10kw (or even 5kw) but make the lower end 5kw so we don't have to worry about 250watt daytmers going broke. THAT, I'll bet, would make the NAB squeal, but it would be worth it.

>It is one thing for a fellow Part 74 license holder to
>'pick up' a news lead and send their crew over to
>where... but its a "Cow of a different Horse" when they
>use the actual report of that other station on their Air.

The advice you gave the original poster was correct and right on point. I would add that the Electronic Communications Privacy Act also made MONITORING transmissions in teh Broadcast Auxiliary Service illegal, whether the info is used or not. Prosecutions are difficult if not impossible in almost every case, UNLESS the offending aprty is silly enough to act upon (e.g. broadcast) the info so gained. THAT is a criminal violation of the ECPA with sever penalties. A complaint to teh local U.S. Attorney with a cc: to the alleged offender may work wonders.

# 1211. MEGA Radio Deal

Newsgroup: rec.radio.broadcasting
Date: 1995-07-19 00:00:00 UTC
From: CBSO58A@prodigy.com
Message-ID: <3uhpst$sld@vixen.cso.uiuc.edu>
Source record: 30447

Doesn't anyone find it alarming that ONE company could own FIVE FM radio stations in a single market?

NEW YORK -- Evergreen Media Corp. said Monday it had agreed to buy a dozen radio stations in five markets including Chicago, Philadelphia and Boston from Pyramid Communications Inc. for $306.5 million.<
The deal would expand Evergreen's station lineup by more than a third to 34 overall, making the Irving, Texas-based company one of the nation's biggest radio station group owners.<
Pyramid's stations in Boston and Philadelphia would give Evergreen representation in all 10 of the nation's top radio markets, potentially making the Evergreen station group more appealing to advertisers.<
The deal is subject to regulatory approval, but is expected to close in early 1996.<
Pyramid is selling three stations each in Boston, Philadelphia and Buffalo, two in Charlotte and one in Chicago in the deal.<
``The Pyramid stations are real jewels expertly managed and operated and leaders in their respective markets,'' Scott K. Ginsburg, chairman and chief executive of Evergreen Media, said in< a statement.<
Pyramid, based in Medford, Mass., is privately-held by the investment firm Vestar Equity Partners of New York and company managers led by chief executive Richard Balsbaugh.<
Evergreen said it would seek waivers from regulations on how many stations a single company may hold.<
Federal Communications Commission regulations permit companies to own no more than 20 AM radio stations and 20 FM radio stations overall, and no more than two AM and two FM stations in any given market.<
The purchase would leave Evergreen with 23 FM stations overall, five FM stations in Chicago and four FM stations in Charlotte. Evergreen recently obtained a temporary waiver to own four FM stations in Chicago. <
Pyramid owns WXKS-FM, WJMN-FM and WXKS-AM in Boston; WHTT-FM, WSJZ-FM and WHTT-AM in Buffalo and WRFX-FM, WEDJ-FM and WRFX-AM in Charlotte. It also owns WYXR-FM and WJJZ-FM in Philadelphia and WNUA-FM in Chicago. <

Former Z-Rock affilliate WPBZ is now alternative "the Buzz," filling a huge hole in the market. Another AOR in Martin County (just north of the Palm Beaches) has been leaning alternative while WSHE in Miaqmi made the switch a few months ago.

WPBZ sister WKGR ("the Gater") retains their classic rock sound.

The Buzz is currently jockless, running liners that say

"channel surfers have finally found a place to stop."
"it's your generation, now tell us what you want."

Contests are handled by "Buzzy the janitor" who comes on mike amid feedback to announce they "have some sort of a contest or thing" going.

Umage artists (according to the promos) are Hootie and the Blowfish, R.E.M., Soundgarten and Nine Inch Nails.

# 1215. D.C. / WWRC-AM's "Anchors Away" / Wash. Post.

Newsgroup: rec.radio.broadcasting

From: "Max Cacas - NPR News Ops - Wash. D.C." <MCACAS@npr.org>
Message-ID: <3umps9$m4i@vixen.cso.uiuc.edu>
Source record: 30251

Tuesday's (7/18/95) Washington Post "On the Dial" (Radio) column reports that Greater Media's WWRC-AM (980) has fired the talk station's last two news people, and has signed on with Metro Networks to provide 5-minute local newscasts.

The Post says George Papagiannis and John Meagley were let go last Friday. Papagiannis has landed work as a free-lance reporter for competing news-talker WMAL-AM (630), while Meagley, who also works for UPI Radio, has a job at... Metro Networks!

Metro, which is an outgrowth of the more familiar Metro Traffic Control, now airs local newscasts for WWRC, WRCY-FM ("hot country"-formatted "Thunder 107.7", a rimshot from Warrenton, Va.), WPGC-AM ("Flava 1580"), WARW-FM (CBS' "Arrow 94.7") and WXTR-FM (Seventies "XTRA-104") in the Washington market.

Metro has assigned Jim Hawk, former News Director of WXTR-FM (Seventies "XTRA-104") to do mornings on WWRC; John Irving, who was recently let go by WKYS-FM as News Director/Morning Anchor will read afternoon news on WWRC. (Note: This marks an indirect "reunion" for Hawk and Irving, who had worked together for WKYS in the early 80s.)

Jack Roberts, WWRC's acting PD, says the move to Metro newscasts was a financial decision, and told the Post that "vendored news" is the wave of the future. Perhaps by way of explanation, he noted that Boston talkers WBZ and WRKO have recently added newscasts from "vendors". Claire Meyerhoff, Washington bureau chief for Metro News, says the network gets news from a variety of sources, and has an agreement with News Channel 8, a regional cable-tv news station.

Separately, Metro Networks D.C. Operations Manager Mike Morrison is moving to the Metro Networks office in New York to assist with the network's expansion in the Apple.

And so it goes...

Length of tape perhaps isn't as critical as how well the tape opens. When a PD is listening to a pile of airchecks for an advertised opening, time is at a premium. In most cases, if the first or second set doesn't grab you, it doesn't even get heard. I suggest starting with your strongest set, and go from there 2 to 5 minutes maximum. If they want to hear more, they'll tell you. The presumption is that you're sending them a tape of your best work, so send it!

# 1218. Promo Materials Wanted for Convention

Newsgroup: rec.radio.broadcasting
Date: 1995-07-20 00:00:00 UTC
From: fybush@world.std.com
Message-ID: <3umptd$m6q@vixen.cso.uiuc.edu>
Source record: 30254

An open message to any radio station people out there, especially you in the promotions department:

As has been posted here, the "Decalcomania" club ("The Club for Fans of Radio") is holding its annual convention July 28-30 in E. Brunswick NJ. We're a small club of folks who are passionate about all things radio, and much of our collecting involves bumper stickers, magnets, keychains, playlists, t-shirts, etc. etc.

At our conventions, we have a "promo table" in which attendees bring about 30 examples of such items, usually from their local stations. Everybody takes one of each, and we all go home with lots of neat new material.

And that's where all of you come in: If you're able to part with 30 stickers, 30 magnets, 30 pieces of letterhead even -- please send them to us! We collect everything...and don't you want to have your station on the table there too? Can't spare 30? Send us what you've got and we'll use 'em as door prizes.

Interested? Good. Here's where to send it:

If you think it can get here on or before Thursday July 27 (I leave that night), send it to me:

Scott Fybush
48 Bacon St. #5
Waltham MA 02154.

If you think it can get to NJ on Friday or Saturday, send it to the convention host:

Paul Richards
PO Box 126
Lincroft NJ 07738.

Either way, it will be much appreciated. We'd be happy to send you a copy of the Decalcomania newsletter as a token of our appreciation...just ask.

And BTW, it's not too late to make plans to attend. You can contact Paul at that address or at his email address: testnet!paul@pegasus.att.com, or by phone at 908-591-2522 for more info. It's going to be quite a get-together. If you can't make it in person, you can listen in to SPECTRUM on WWCR shortwave - 5.810 MHz - at

10pm Eastern on Saturday the 29th to hear a live broadcast.

And to all of you who might be able to help us out...

Thanks in advance!

-=Scott Fybush - fybush@world.std.com - Decalcomania Convention Committee=-

# 1219. Re: Sacramento Radio News - 7/7/95

In <3u5g2a$3l7@vixen.cso.uiuc.edu> mward@crl.com (Mike Ward) writes:

>You'd be kind of interested to know, I believe, that I had a flashback of
>my own when I moved out here to Sacramento. Do you know that "Cruisin'
>1470" here (KXOA-AM) is almost a clone of our old WRQQ? I believe they
>even bought the Jay Stevens package we used. Don't tell me you programmed
>their automation computer, too. ;)
>

Here's more on the two stations at 1470 !

Before Mercury Broadcasting purchased WOJY AM/FM-Farrell PA/Sharpsville PA,
1470 was OLDIES too. The station was live-assist/automated, using tapes I
produced in-house. The format was UPtempo Oldies from the 50's & 60's.
The slogan was..... " Cruisin' 1470" !
I still have old media kits & letterheads with the logo and slogan
"Cruisin' 1470". The new owners wanted to distance the new station from
the old station, but play the same music! So Kelly Holtzclaw and myself
spent one long day coming up with a new image and liners for 1470 am.
And so
WRQQ 1470 "The Rock" was born! During the brainstorm session I
mentioned to Kelly about this great little Oldies station in the Las
Vegas NV market, KRRI 105.5 K-Rock & Roll (now KQOL). He not only knew
about the station, but knew the owners. They were using the Jay Stevens
package! And the rest they say "Is Radio History !"

## 1220. Re: Options to secure 2 way communications?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-20 00:00:00 UTC
From: stellastar@aol.com
Message-ID: <3umpte$m6s@vixen.cso.uiuc.edu>
Source record: 30256

When I did morning news in Des Moines, "Captain Jack" on WHO was the only traffic reporter up in the air, and precious few others even bothered to get into a car and check the scene out in person. To be honest, the notion of needing traffic reports in Des Moines was a bit grandiose, as most of us agreed that "rush hour" lasted about ten minutes.

But it wasn't hard to get a cheap 9-channel scanner tuned to pick up Jack's transmissions to the station, and you could hear him chatting with the jock (at least his side of it) about when they'd take a break, what he'd be talking about, etc.

Apparently it was getting on his nerves to hear things like the station that repeated his reports almost word-for-word, while you could hear HIM in the background, on that "reporter"'s own car radio...so he took to doing bogus "bulletins" on his own frequency only.

That is, he'd say "I see a big truck on fire on the interstate"...on his plane-to-station link ONLY. If another station repeated that, he might give 'em a phone call to discuss intercepting private communications, or just go on a few minutes later and say "faked you out, cheater!" or something like that.

: Los Angeles has at least three of these types of operations:
[]
: There amy be others. Also, on AM, KPLS Santa Monica (830) and KCTQ
: Thousand Oaks (850) with the Radio Aahz childrens programming

St. Louis *had* WFXB (101.1) and KFXB (105.7) from about 1990-93 relaying the same AC format, using the slogan "The Fox". KFXB was (and KPNT still is) a rimshot signal that has
some coverage problems in the northern parts of the St. Louis metro area, while WFXB had (and WVRV still has) a weaker signal but a close-in transmitter location that covers St. Louis City adequately.

After KFXB became KPNT in 1993, WFXB continued for a while without the simulcast, and then changed formats and last year changed call letters to WVRV. I think the consensus in St. Louis was that the simulcast was a flop. KPNT has gone on to considerable success with a well-executed modern rock format. WVRV is still trying to find its place in the market.

(NB: For some reason -- advancing age, maybe? -- I forgot whether the KPNT switch was 1992 or 1993. I don't have my reference books at the office, so I'll just leave this note stand to cover the possible options!)

## 1222. Station Skipping

Newsgroup: rec.radio.broadcasting
Date: 1995-07-20 00:00:00 UTC
From: RobABass@aol.com
Message-ID: <3umpth$m6v@vixen.cso.uiuc.edu>
Source record: 30258

On Tuesday, Ju;y 18th, at approx 10:40PM CDT, I was working at my part-time radio job at KEOM-FM in Mesquite, Texas. Around this time, I got a call from someone in Ontario, Canada, who said he was able to briefly pick up the station.

If you are interested in hunting for skipping stations, this is probably a good time to do that, as I am also aware that someone else picked up KEOM for two straight days recently, whilr vacationing in Tennesee.

I don't know if the person who called me at KEOM on that evening, is a reader of Airwaves, but if he is, I would just like to again say hi, and again thanks for calling.

To my knowledgement, this is the second time someone in Ontario has been able to pick up KEOM. It did happen when I was working a daytime shift back in 1987, but at the time the station was operating with an ERP of 3,000 watts. The current ERP of KEOM is 61,000 watts.

Rob Bass

P.S. PLEASE NOTE: I am not a spokesperson for KEOM... I only included the station calls and ERP wattages for your personal interests. All other comments are strictly my own, and do not necessarily reflect the views of KEOM and the Mesquite Independent School District.

I was stationed at Dow AFB, Bangor Maine, during the blackout, and seems like I was listening to WNEW-AM NYC for news of the event. Bangor was not affected by the blackout.

# 1224. Re: Smooth jazz...Is it Jazz?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-20 00:00:00 UTC
From: directory.js@genie.geis.com
Message-ID: <3umpti$m74@vixen.cso.uiuc.edu>
Source record: 30260

Is it Jazz? Of course it's Jazz.

Drew in the Twin Cities says:
> "... a large portion of the music played is NOT JAZZ by any stretch of the imagination."

By your definition, it is not. I would respectfully suggest that your definition is irrelevant in 1995. It is the consumer who defines the terminology, not the self-selected critics.

The consumer -- who listens to these stations, buys the cd's, and attends the concerts -- calls this music Jazz. Overwhelmingly. No hesitation.

Many of the radio stations which play the music are heavily researched. If even a meaningful =fraction= of the audience were to say, "We listen because we like what you're doing, but we don't think you should call it Jazz", those stations would =stop= using the word. It's that simple.

Alan Freed says:
> "It's a misnomer. What really is smooth jazz? It's "happy jazz" ..."

Bzzzzt! Sorry. If that term resonated with the consumer, that's what it would be called.

I'm fortunate to be in Chicago where WNUA is "Smooth Jazz". I've researched the market for radio clients, as a consultant for other stations here (as well as elsewhere), in the course of which the listeners are often asked to describe the various stations in the market.

Ninety-something percent of them, in my experience, describe the station as some variation on "Jazz" or "Smooth Jazz". I've never heard anyone offer "happy jazz" to describe it. I also don't recall a groundswell of people saying "Well, they call it Jazz but it really isn't", even though a certain amount of press coverage in the area over the years has tried to suggest that it somehow isn't "real" jazz.

Alan continues, before going completely off-topic:
> "... an original American music genre with its heart and soul ripped out."

Every musical genre either evolves or else simply dies, frozen in time. Jazz continues to evolve.

If those who don't like the direction of its progress want to make snide remarks about it, that's fine. They are only offending the fans, while failing to make a point to anyone other than those who already see things their way.

Mark Howell, a News Director in Bakersfield says:
> "But how do you put Anita Baker in the same category as Anita O'Day? Or Kenny G in with John Coltrane?"

Okay, Trane was a genius who achieved critical acclaim and had a cult following. Kenny G is an accomplished musician whom many critics trash for playing bland, homogenized music. He is also extraordinarily successful as a commercial performer and is highly regarded by the =consumers= of his music.

I don't know that either would regard himself as being in the same musical category as the other. But in the 50s, =some= people who liked Coltrane called it Jazz (along with, you may or may not realize, a number of other terms to separate it from the traditional "mainstream" jazz of the time). And in the 90s, the Kenny G fans call his music Jazz too.

Tell ya what. Find me a Chuck Berry fan from the 50s and play him a Pearl Jam album. Whether he likes it or not, he will probably say, "But that isn't rock. Rock is Chuck Berry, Elvis Presley, Fats Domino, Buddy Holly."

He doesn't realize that his music was then and this music is now. Or, as Annie in Philadelphia so appropriately summarizes, "... play your 78's and stop whining."

Amen.

Back to Mark again:
> "I don't care what they play. I just wish people didn't think of it as jazz."

But they do. And they will.

You may accept it or not. It doesn't really matter.

The consumer will define the terminology. It's that simple.

MHz@bitstream.mpls.mn.us wrote:
: Think about any "type" of music and they all have some sort of
: adjective in front of them...(classical, neo-classical, ac, hot ac...)<

And to realize how ridiculous some of these monikers are, use their
antonyms:

"young country" / "old country"
"modern rock" / "obsolete rock"
"smooooth jazz" / "abrasive jazz"

In many cases, the aim of such adjectives, as is the aim of so much radio
promotion these days, is to tell you what the station is NOT, rather than
what it IS. A bad, noninclusive strategy, to be sure, but that's the way
it's been going for years.

[re "smoooooth jazz"]
: Why do many rally against this description? Because it's just wrong.

I think I have a better one, dating back to the "fusion" trend around 1980:
butcher-block background music for Volvo drivers.

: Then
: everyone starts thinking this is jazz, just like everyone seems to think talk
: is "bad" as a result of the "Less Talk, More Music" propaganda. (Though the
: latter is more dangerous, for it sets up DMX and the like to be all the more
: acceptable. See what we've done now?)

No one ever *did* answer my question, posited here a few months ago, about
how *advertisers* feel about "commercial-free music sweeps" and the like!

"This Way Out," the internationally syndicated gay/lesbian radio program, now has a fully revised and updated home page on the World Wide Web.

The Web page was developed with the assistance of Ron Buckmire, well known for his extensive efforts in creating the Queer Resources Directory, an online compendium of information for the lesbian/gay/bisexual/transgender community.

"This Way Out's" Web site contains a variety of information about the award-winning program, now heard on more than 80 stations in eight countries. Computer users on the Internet and on a variety of online computer systems can access such information as a list of stations carrying "This Way Out," detailed program summaries, and biographical information about the all-volunteer staff.

To access the "This Way Out" Web site, point your browser at http://www.qrd.org/qrd/www/media/radio/thiswayout

The Queer Resources Directory is accessible online at http://www.qrd.org/qrd

Check us out!

Both WJFK and WJZW "moved in" to DC under the old contour protection options afforded to older stations (licensed prior to 1959) before the rules were changed in 1985 to disallow such a radical short-spacing with two existing full power class B stations less than 40 miles away. (WMMX and WQSR, Balto). Both JFK and JZW have directional antennas which suppress signal toward Baltimore, thereby penalizing their coverage of the DC metro. FM directional antennas are almost always disappointing for their owners because they usually "over-protect" and form deeper than necessary nulls. This is because nulls are much harder to control at FM frequencies than the directional antennas used at AM freqs. This is especially true for JFK which uses an antenna with parasitic reflectors. The JZW signal is not quite so bad because it uses a panel type antenna. The main reason WRQX has signal problems to the west in northern VA is the fact the antenna is mounted on the east side of the channel 7-9 TV self supporting tower. That structure is massive, with a large cross-section. We have measured the 107.3 signal on various occasions, and even after the antenna was changed out several years ago, the situation did not improve significantly. You can't fight mother nature, contrary to what my friend Rick King believes. The solution to the RQX coverage deficiency is to build a wrap-around panel antenna on that tower. The signal would then be comparable to that of WASH and WKYS.

I like the DSE-7000 and have continued to like it since I got it in October 1990. The DM-800 is different, not as smooth, but with it's own likable features. It all depends on the kind of work you want to do, and how you like to work.

You bring out a very interesting point...AM's disadvantage (only partly overcome by its transition to less fidelity-sensitive spoken word programming) is not a function of AM modulation or the medium wave band itself, at least not for the most part. Today's transmission standards permit flat audio response at least out to 10 kHz; we transmit a flat signal 30 Hz-10 kHz, and could transmit highs to 15 kHz if interference protection rules didn't mandate a sharp rolloff above 10 kHz (and that last 5 kHz actually makes relatively little difference to the listener, given that most adults' hearing rolls off pretty rapidly above 10-12 kHz as well). And no one in the listening public knows it.

Why? It's the receivers, especially the tuner sections, that roll off AM sgnals rapidly above about 5 to 7 kHz. Some genius decided many years ago, that this reduced the objectionable effects of lightning and other natural and man-made sources of noise and static, even though it really makes little practical difference except to degrade the quality of the received signal 99% of the time. So that means AM stations that are perfectly capable of transmitting high fidelity music, in stereo no less,

can't do it because no one will hear half the signal they're sending.

It didn't have to be this way. The FCC could have set a stereo standard early, and saved a lot of the trouble we've seen. But the so-called market was allowed to decide, and there are times when it just can't.

The saving of the medium waves now, especially as Rush & Co. show signs of running out of gas, may be a combination of new voices on talk radio to rekindle interest in the short term, AND in-band/on-channel digital radio standards which will literally level the playing field for medium wave and FM-band stations once again.

I bought a 95 Ford Explorer and the "premium" sound system, which is an AM-FM-Clock-Cassette player, has AM stereo. I have some ham equipment that I wanted to connect the audio into the Explorer stereo. After I added connections for that, I broadened the AM audio response by adding a single cap across the IF filter. Beautiful AM stereo now. It's too bad they didn't include that with the stock unit, but at least they made it stereo. I have an assortment of wider filters such as 16, 12, and 8 khz that I may experiment with in the future in place of the capacitor.

Jack

Some folks claim that an AM receiver with a wide IF bandwidth would suffer from so much interference that listening would be "unpleasant." After listening to wideband AM on the SRF-42 and other receivers, I've found that the increase in noise is not that serious, and on local station, it is often not noticeable. In any case, the improved fidelity makes for more pleasant listening, despite the increase in noise, in my opinion.

Others claim that a wide bandwidth receiver would be nice to build, but because of the above noise problems, a narrow IF bandwidth would have to be provided, and the costs of building a receiver with two bandwidths would be prohibitive. This sounds like a bunch of B.S. to me because ceramic IF filters usually don't cost more than $3.00, possibly less in production quantities. Needless to say, multiple bandwidth IFs are common in communications and high-end FM receivers.

Yeah, I think there is a conspiracy...wean younger people away from AM so that they listen only to FM radio. Then, introduce a new broadcast medium and rant and rave about the new digital technology it uses to produce crystal clear sound. Pretty soon, FM tuner designs start declining in quality. Or, look at the tape decks in the newer bookshelf stereo systems....most of them don't have recording level controls or bias controls. That way, home taping is discouraged and buying CDs is encouraged.

The latest editions of the GE Superradio III carry a huge
"AMAX" logo on the box. The unit is *not* stereo, but
there is a bandwidth adjustment that I assume is a sign
that they're adhering to whatever AMAX standards there are.

The Sony WMF-42 is still receiving precious little distribution
after almost 2 years on the market. The only place I've ever
seen one is at the Sony store on Michigan Avenue in Chicago.
Where else can they be found? (Just curious, I already own one.)

Tom's right, there were automated stations in the late 1970's. Back then automation systems cost much more than they do now. Owners could hire live people (where the talent was available) more cost effectively than they could afford the equipment. Remember the Harris System 90 which, fully equipped, cost about a hundred grand? Then you had syndicated programming costs on top of that. Plus, I don't think the FCC allowed unattended operation then, so somebody had to be there to baby sit.

At one time, automation was a luxury. Now, it's a boil on the butt of radio.

: and would like to exchange views and ideas with anyone who does.

[I am posting to the newsgroup because I think this is of general interest, and hasn't been discussed here in more than a few months.]

The usual manner in which this is accomplished in the United States is through FM subcarriers, located on the baseband "above" the subcarrier that carries stereo information.

Relevant to "talking book" services, as they are called in the United States, one of two narrow-band FM subcarriers are used. One subcarrier is centered at 67 kHz, the other at 92 kHz on the baseband. Frequency response is approximately 100-5000 Hz.

Range is much more limited than the main channel of the FM signal, and SCA (Subsidiary Communications Authorization) subcarriers are extremely prone to multipath distortion. Still, it is a worthwhile and underutilized medium for speciality services such as this.

The availability of talking book services varies. It essentially depends upon either being in a major metropolitan area or being near a university that runs a radio station that's willing to carry the service. (see footnote) Most if not all the readers are volunteers.

Listeners may either borrow or buy receivers that are pretuned to the station carrying the service. In addition, there are a couple of hobbyists who sell kits or modified radios that can tune the entire FM spectrum. The favorite radio for this purpose is the GE Superradio III.

Oftentimes talking book services will be networked to provide wide coverage. Kansas University does this, for instance, with KANU's subcarriers being relayed on other stations in Kansas plus KCUR(FM) in Kansas City, Missouri. There is a similar service on WVRV(FM) in East St. Louis, Illinois, serving the St. Louis area.

(footnote: KBIA(FM) in Columbia, Mo. tried to keep such a service going for about 10 years until it had too much trouble keeping volunteers to do the reading. Its subcarrier now carries background music for a fee -- a shame.)

KANU, interestingly enough, carries the same talking-book program on both subcarriers. Evidently one subcarrier is intended for use with older receivers that don't contain the 150-microsecond deemphasis that newer SCA receivers have; the other contains preemphasized audio.

In the USA, there are FM stations in larger cities offering spoken word programming as part of their SCA (hidden channel) service.

In Oregon, for instance, the entire Oregon Public Broadcasting network of a dozen stations covering the state provides a mix of talking book, radio theatre, and regular National Public Radio programming. This is available by decoder for a fee of about $100 (purchase price for the radio).

Donald Paschal wrote:

: The question is, since both CBS and Group W are active in many markets,
: if the merger goes ahead, what stations would the combined company sell off.

This may explain the inexplicable purchase by Group W of the old
KKHI-AM-FM (now KPIX-AM-FM) in San Francisco last year. People raised
their eyebrows over it, since it didn't seem that they had a cohesive
plan.

Perhaps now they do. Our market already has market leading KCBS(AM) with
all news and KRQR(FM) with a sort of oldies format. Even so, ABC bought
an additional station here (KSFO) and Shamrock (Disney) took over Malrite,
giving them 4 stations here. It may be just a matter of size -- they feel
they'll need more stations in order to compete.

I guess this puts an end to the long association of Group W with NBC,
going back to it's founding.

> stations in a single market?

[Folowing was an article outlining Evergreen's purchase of Pyramid,
which will result in Evergreen owning five FM's in Chicago]

I find it worrying, and judging from past posts in this group, I think
many others do as well. Unfortunately, we're not the ones making the
rules. Right now, the radicals are in control in Washington, and
they're more interested in trying out all their pet free market theories
than they are in regulating any business, let alone one as minor in
the overall scheme of things as radio.
I find it even more worrying that because of these people, the future
will probably see virtually all of the radio stations in any given
major market owned by just two or three companies. This Evergreen deal
is just the beginning. But, hey, regulations out of fashion right now,
so we're just going to have to live with it. The result will be some
truly boring radio, but unlike some of the other deregulatory proposals
being considered, at least no one will die as a result.
Sorry, I guess that's enough cynicism for now.

I've seen alot of good advice to you in these responses. Sticking with it is probably the best advice. If you start and find it's really something you want to do, then stick with it. I dropped out of radio for a few years (joined tha Army (bright move?)). When I got back into it, it was in a station with a total of six employees in a town called Scottville, Michigan. It was sattelite country. It's real easy to get bored, and find a job doing whatever else. But I've seen friends that have stuck with it become very successful. Others become discouraged and hate their choice to even try it.

Personally I think it's fun, I can't belive thay pay me to do this. I also can't believe I can get by on what they pay.

Good Luck,

I have been reading this back and forth with some interest, generally siding with Fred's real world view of the radio business - but - I think that even Fred will find the radio marketplace about to undergo rather dramatic changes. Duopolies have made some fundamental local market changes, but Congressional repeal of station ownership limits is going to trigger an incredible concentration in radio station ownership. Prices will rise dramatically for "quality" properties as a national bidding war starts and many players at the margins are forced out of the business. I don't view this as either "good" or "bad" simply inevitable. Right now is an ecellent time to be looking for underperforming properties with good engineering possibilities.

Where then should prospective purchasers of radio properties look for capital? The biggest hurdle in getting into business is finding the capital to invest. There aren't very many people out there who will lend to someone who may know the radio business well enough but has nothing to offer in the way of collateral.

Message-ID: <3umpsr$m5i@vixen.cso.uiuc.edu>
Source record: 30382

The Navy's Project ELF transmitters in Northern Wisconsin and the Upper Peninsula of Michigan broadcasts on 76 Hertz. That's ELF. The signal is frequency shift keyed between 72 and 80 Hertz. The data rate varies with receiving location. Using extensive computer enhanced digital signal processing, a three letter (as in a letter of the alphabet), message can be reliably communicated to the Indian Ocean in thirty minutes. The North Atlantic clocks in at a blazing 10-12 minutes.

To send this amazingly tiny amount of information at this absurdly low data rate, the two ELF transmitters use a combined input power of 3 megawatts. Of that 3 megawatts, approximately 5 watts is actually radiated as an RF signal. The rest is dissipated in the ground and the equipment as heat. This is because a proper antenna for Project ELF would be 2500 miles long. The Wisconsin ELF antenna is 28 miles long and the Michigan ELF is 71 miles long. That's like an FM radio station trying to broadcast with a 3/4 inch antenna.

Political arguments aside, the ELF transmitter should be decommissioned on the basis of inefficiency alone. Blue-green lasers from satellites do the job much better.

I've been looking at this same problem. My solution was to use
a directional yagi antenna with rotor(Radio Shack sells these)
and also change out the crystal IF filter in the tuner. I've found
that most receivers have a wide bandpass(280 Khz). The FM
signal is limited to around 150 Khz.

The filters are quite inexpensive and simple to change out
if you can use a soldering iron. Digi-Key has filters for FM
IF's(10.7mhz) that are 110, 150, 180, 230 and 280 Khz wide
(these are 3 db down bandwidths)

I have volunteered recently for RRSM, The Radio Reading Service of Mississippi (USA). They provide 24 hour readings of local and national publications. This is a service of Public Radio in Mississippi (PRM). RRSM broadcasts on a sub-carrier (I think that's the term) of the PRM signal, which is simulcast on different frequencies throughout the state of Mississippi.

I'd be happy to discuss more if you like.

Brian...

There are many radio-reading services of the kind you describe here in the States.

Here in the Washington, D.C. area, "Washington Ear" has been providing a radio reading service for the blind/visually impaired for many, many years. Clients obtain the service (which is broadcast over the sub-carrier of a local radio station) using special radio receivers provided at low-cost or no-cost (depending on financial ability). They read the newspaper, books, and other printed material.

"Washington Ear" is located in Silver Spring, Maryland (a nearby suburb of Washington, D.C.). Their phone # is 301-681-6636 (sorry, I was unable to find an e-mail address or WWW site for the Ear).

Hope this helps...

Cheers, Max

# 1260. Toledo Talk Radio Host Fired

Newsgroup: rec.radio.broadcasting
Date: 1995-07-20 00:00:00 UTC
From: bobseybold@aol.com
Message-ID: <3umpt1$m5s@vixen.cso.uiuc.edu>
Source record: 30389

Friday (7/14), following her 3-5 pm show, Maggie Moore was fired by management of NewsRadio WSPD 1370-AM. Since September, 1993, Moore had hosted "On the Other Hand", a daily talk show featuring topical issues, open phones, and a decidedly liberal bent. Moore's show followed Rush Limbaugh, WSPD's highest-rated talk program. According to sources inside the station, Moore was told by GM Andy Stuart that ongoing audience research being conducted by Noble Broadcast Group indicated that her format was not one that fit with their programming plan for WSPD. Noble, which owns WVKS-FM (CHR) in Toledo, is currently LMAing WSPD and sister station WLQR-FM (Soft Rock), while the purchase of both stations is being completed. Beginning Monday, 7/17, WSPD will air a three-hour newsblock from 3-6 pm, in an expansion of the former 5-6 pm WSPD News Hour. Moore's producer, Becky Tobias, will join the WSPD News Department staff as a producer and part-time news anchor.

Many stations are setting up thier own home page on the web. It sems
to be a new promotional gimmick. Some of the WWW sites are quite
extensive with Playlists, Local artist Information, Concert Info and the
like. The END in Cleveland has a rather extensive Site.
MIT has compiled a list of all stations currently with WWW Sites.
I'd be happy to share the info I've collected so far if you'd like to
Email me. While I'm off the air right now....I've been collecting
Internet Radio information....and perhapes I can help.

>>I heard a rumor that Kevin MAtthews (mornings, WLUP FM 97.9 in chicago)
>>was being let go. Evidently Robert Feder indicated something like this
in
>>the Chicago Sun-Times this week. Anyone know if there is any truth to
>>this rumor? I'm just curious. TIA!

Andy,

I don't believe there is any truth to the rumor you heard. I don't believe Robert Feder made any mention of Kev leaving the station. There was a television show on in Chicago last week called "Faces of Radio" which spent a lot of time documenting the "war" between Mancow Muller on rocker WRCX, Kevin on WLUP and Steve Dahl on WMVP. (Robert's Tuesday column previewed the show.) Mancow launced attack after attack on Kevin. Kevin seemed bored with the "battle" saying he wouldn't stoop to Mancow's level etc etc. Robert commented on Mancow's unrelenting attack on Kevin, but didn't imply Kev was leaving. Mancow is calling for Kev to leave and that might be the origin of the "rumor".

Don't bet on Kev leaving in the forseeable future.

: It was good to hear that KRES / KWIX suffered no damage during the recent
: tornados that ravaged Moberly, MO [...]
: Best off all they use thier 100,000 watt signal for what it was
: designed for, to serve ALL who hear it, not just some city they want to
: sell advertising in.

Ummm, they're not entirely immune to that. They go into mono for St. Louis Cardinals baseball broadcasts to increase signal penetration in Columbia. This pisses off Columbia Cards affiliate (since 1947) KFRU to no end.

Also it should be noted that KWIX and KRES were running separate programming the morning after. KWIX (490 watts at 1230) focused on Moberly itself; KRES broadcast information for Moberly and for the entire region.

That part of Missouri had several broadcasters like that: Earl Dougherty in Mexico (KXEO/KWWR), Sam and Vera Burke in Kirksville (KIRX/KRXL), and, of course, Jerrell Shepherd in Moberly. All class IV AMs and class-C FMs; all heavily into community service. Shepherd's the only one who's still alive, though the traditions continue to some extent at the other stations. I remember talking to him at the University of Missouri School of Journalism when I was a student in 1977 -- even then, he was wondering what he was going to be able to do with his AM stations. He clearly saw that FM was going to overtake AM quickly, and invested the money in thousand-foot towers and 100,000 watt facilities (not just in Moberly, but in Lebanon and Farmington, too). Some of what his stations do is hokey, but it works and it makes money.

About the only lousy station in the chain is KAAN in Bethany, which simulcasts on AM and FM (in mono). That may be due to the horrendously depressed economic conditions on the Iowa-Missouri border.

Shepherd also has had a very good reputation over the years in treating employees well. You *can* treat employees well and make money, contrary to what some people seem to argue in this forum.

: KLVE SS AC 4.5 4.8 [....]

By "SS AC" doesn't the article mean Spanish language adult contemporary? IF so, this means this Spanish language station is #1 or #2 in all dayparts in the 2nd largest media market in the country.

Considering that English is still the majority language spoken in Los Angeles and that there are other Spanish language stations competing, this would tend to indicate that Spanish AC is getting more Ensligh speaking listeners, perhaps people bored with the other stuff out there on the English language statins. Or am I wrong about this?

Is someone censoring the news that we read and hear? Are we really getting the facts from radio and television?

A new, exciting radio program will be heard on KVOH short-wave, 9.975 MHZ, starting on August 7th from 8-9PM Pacific time, 9-10 Mountain, 10-11 Central and 11-12 Eastern.

Radio Liberty will bring you the story behind the story, the news behind the news, hoping to convince you that:

Reality is usually scoffed at,
illusion is usually king,
but in the battle for the survival of
western civilization
it will be reality, not illusion or delusion
that will determine what the future will bring.

Radio Liberty will take you behind the scenes to expose the truth about what is happening in America today, and keep you informed about the hidden forces at work within our society.

As Thomas Jefferson said two hundred years ago: "If a nation expects to be ignorant
and free in a state of civilization, it expects what never was and will never be.... and...
enlighten the people generally, and tyranny and oppression of body and mind will vanish like evil spirits at the dawn of the day."

This reminds me in a way of a stunt WVAM in Altoona, PA pulled on
competing WFBG back in the 60's.

WFBG was paying out $1,000 if they called and you answered the phone with
"I listen to WFBG."

WVAM let them roll with it for about a week, then began their campaign.
"We'll pay you $5,000 if you answer your phone 'Hello' when we call."

I believe I heard Jim Bohannon say last night that he was on "Westwood One Entertainment," *not* the "Mutual Broadcasting System." Perhaps Westwood One has stopped using the "Mutual" and "NBC" names?

In this neck of the woods, several stations carry *some* Westwood One programs (WTAE-AM 1250 in Pittsburgh, WLSW-FM 103.9 in Scottsdale, Penna., and WSSZ-FM 107.1 in Greensburg, Penna., come to mind), but I don't know that any of them are considered "affiliates." As far as I know, WTAE-AM, a Hearst station, is an ABC Radio affiliate.

Does Westwood One still have the "affiliates" of MBS and NBC, and their accompanying O&Os, or are they only a program syndicator/distributor?

I'll stay tuned for more information on most (some? any?) of these NBC (Westwood One?) stations... :-)

# 1271. San Diego Radio Watcher: 7.21.95

Newsgroup: rec.radio.broadcasting
Date: 1995-07-22 00:00:00 UTC
From: San Diego Radio Watcher <chris@terminus.wccs.saic.com>
Message-ID: <3upn7j$6b6@vixen.cso.uiuc.edu>
Source record: 30271

Digitally delayed and in beautiful stereo, here's what is
happening in radio waves in America's Finest City.
[Writers embellishment above: Wheaties for breakfast]

Roger Hedgecock of KSDO [1130, SD] and Ron Smith of WBAL,
[Baltimore, Maryland] held a trans-continental radio broadcast
on Wednesday. The topic was the Waco hearings, which WBAL is
carrying. Roger pointed out that no major network was carrying
these, except for local stations such as WBAL.

Continued fallout. In the wrath of new PD Sherman Coehn at KKOS,
e.mail to me indicates my feelings about listner-involvement is not
alone. Selections below:
+----
I don't understand what is happening at KKOS? There is no interaction
between the jocks and news/weather people anymore.
+-
What is this "progressive" crap [my notes: new moniker] It was this be-
fore, and that's why I listened to them. I heard Lyndard Skynard today.
Progressive?
+--
I miss the lunch box!
+-------------
The Lunch Box was a chance for listners to send in three favorite songs
that were played, and the reward was a meal at a local Italian eatery
or pizza-pizza delivery. This was "canned" when Cohen took over as well.

I'm not against change, but what made KKOS was the appeal that the listner
could call up and talk, suggest, and hear the request. Now, it's turning to
more of the robotic play made infamous by many lack-luster stations. "The
first of a long music set, here's Counting Crows!"

On to better items:
KSDS, San Diego City College [88.3] has been nominated for the Marconi
Jazz Station of the Year. The non-commercial outlet won in 1993. Too
bad XETV Ch. 6's marketing arm has protested the upping of the ERP.

Also nominated for country station of the year is KSON, [97.3FM/1240AM].
These are the only San Diego outlets nominated for the coveted award.

Minion alert: listeners to the show, "Ask Mr. KFI" will be pleased that
the URL to Mr. KFI's homepage has changed to an easier access site:
http://www.calypso.com/mrkfi . It's better and faster than the previous
ftp site. The show is heard only on KFI AM 640, Los Angeles weeknights
from 9 p.m. to midnight. news:alt.fan.mr-kfi for latest happenings.

Every week I'll bounce around the dials to see what is happening, and I was pointed to a Mexican-AAA station, with the moniker XHMORE. It plays a good set of music: Aztec Camera, Sting, Counting Crows, and others. What makes this a gem amoung stations here, it also plays espanol AAA bands, and the talk is in espanol too! The station is now noted in my radio log, address below.

Getting bounced the hard way: KMAX, part of the trio of stations in southern California at 107.1 FM, has fallen on hard times. Doug Krikoran has left the afternoon show of "McDonnell-Douglas Show." The reason? Bounced Paycheck! Apparently Joe McDonnell is still hanging through the stint. The stations move to sports comes on the rumors they are being sold. KBAX is based in Fallbrook, while the 'lead` station, KMAX is in Arcadia, and KAXX at Ventura. [The stations did broadcast the All Star game the first part of July]

Last week I had a small section on the reply of the San Diego Chargers football season by flagship station, XETRA-AM [690]. Woo is me, as this is a Charger town. Apparently, the re-broadcasts are a jewel to those who have been long time SD Charger fans. Next week, XTRA sports does it again with the re-broadcast of the Chargers vs. Pittsburg for the AFC championship. check out the web: http://www.xtrasports.com/

The latest Arbitrons were printed in the Escondido Times-Advocate's "Go" section on Friday:
[April - June rankings]

Overall Mornings
Calls format notes Calls format notes
KyXy AC 7.2 KKLQ CHR 12.4
KSON country down, but not out! XETRA-FM Howard 10.5
XHTZ urban KIOZ Rock 7.6
KSDO talk
KKLQ CHR KKLQ: Jeff & Jer [number one again]
KIOZ Rock co-owned with KKLQ XETRA: Howard Stern [first full book]
KIOZ: Dave, Shelly, and Chainsaw

Rumors: KMPC shakeup? It's been rumored, that Imus' LA station will be KMPC . . . Art Bell will be on the same too. SD's KCBQ format change? TA's Ken Leighton reports that 'CBQ is considering a change. KFMB-FM's 'Star` Format is making strides against KKLQ at 10 a.m., after Jeff & Jer sign-off. [I want to see what KKBH is doing. They have an extensive billboard, and TV campaign running now. When the SD Tribune runs the full routine, I'll send!]

My homeboy page has been expanded: it offers the world-famous San Diego Radio Log, and *now* includes the Los Angeles Radio Log. Southern California is covered from Santa Barbara to Ensenada! As always, satisfaction is upmost, and if you don't like it, I'll double your electrons back! Thanks to all who have looked and responded. :-) [and Ted, I didn't get your return e.mail address. Thanks for stopping!]

>Apart from a low-end Sony walkman model (WMF-42) I have not seen any
>products which claim to adhere to the AMAX standard. Is this
>effort still alive?

General Motors is selling AMAX compliant Delco radios, but they are all upgrades. If you buy a Delco stereo with a CD player or graphic equalizer, chances are the AM will be AMAX compliant stereo. I have one in my car and it sounds great. Check the sales literature carefully. Most GM pickup trucks sold around here come with AM stereo radios...don't ask me why. Chrysler's radios are AM stereo, but not AMAX compliant, as they still limit audio bandwidth to about 6 kHz.

AM Stereo is common in mid to late 80's Toyota models with upgraded stereo systems. I believe all Lexus models have AM stereo. The ones I've heard sound superb.

Now...why are AM radios for the most part so lousy? As the incompetent FCC crammed the AM band full of stations that interfere with each other, and the world became filled with more RF lighting devices, computers, microwave ovens, and other assorted RFI generators,manufacturers responded by narrowing the audio bandwidth in receivers, to minimize the RFI and "birdies" caused by stations spaced too close to each other. As the bandwidth of the radios narrowed, AM stations cranked up the high frequencies in their audio processing to try to compensate, worsening the interference, prompting manufacturers to further restrict bandwidth...and on and on.

The NRSC standard adopted by the F.C.C. a few years back alleviated the interference problem by requiring transmitted audio bandwidth be restricted to 10 kHz on AM. But AMAX also includes a noise blanking standard that manufacturers are reluctant to comply with because of cost (they say). And as for AM stereo...most people don't even think it exists. If you tell them it does, or try to promote your station as AM stereo, they think you're

lying. Or they think their cheap car stereos ARE AM stereo and it's the station (or the band) that's the problem.

I wish I knew. Aside from the SRF-42 from Sony, about the only other product in compliance with the standard that I've heard about is the TU-680NAB tuner from Denon ($600 list). A review of that tuner appears in the May '93 issue of Stereo Review (by Julian Hirsch).

It's a shame that it hasn't caught on, although I suppose one doesn't listen to much more than talk on the AM band anyway (not here in L.A. anyway). I'm waiting for the expanded frequencies, too, (up to 1710 kHz) but I'm not holding my breath.

As one who got into the business in the 1970's (and grew up listening regularly to three of the stations in the "Top Ten"), my comment would be that these were KILLER stations. Creative, energetic and the best argument for getting your music on low-fi AM (as noted in another thread), rather than just buying the records you like.

These stations -- and by that I mean the PEOPLE at these stations -- added immeasurably to the enjoyment and excitement of what was, in many cases, pretty mediocre music. I just spooled through my old linecheck of WCFL's rock 'n' roll signoff (to beautiful music), and it reminded me of several things: How creative the jocks were in those days, how tight the playlists were, how (unbeliveably) high the production values were, even for pretty ordinary items (local spots, etc.).

I think I'm warped for life: To this day, I'll listen to a station with music I HATE, provided it's got good production values and high-energy folks behind the mic.

# 1278. DCC vs. DAT vs. just plain WAV?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-22 00:00:00 UTC
From: Dave Sheranko <dpsher@planetx.Bloomu.EDU>
Message-ID: <3upn7p$6bm@vixen.cso.uiuc.edu>
Source record: 30278

I'm going to be starting up a very low-level production facility here for a handful of college stations and one or two commercial stations, and I could really use some advice.

For the last six months or so, I've been doing CHR/college format production work out of a very cozy setup (486/66, Logitech 16-bit board, WinDAT and GoldWave under Windows, and a helluvalotta home-made drop bits). Up until now, I've been able to transfer directly from my system onto a cart, but that is no longer feasable. I do have access to a nice Otari reel, but I'd like to be able to provide some method of sending out sound digitally other than WAV files. I've found one DAT and one DCC deck with features that I like, but I really don't know which way to go. What's the current industry standard? I don't want to spend $400 only to find out that I'm the only one with that format.

Or should I just forget about the DAT/DCC, assume that anyone with digital capabilities can receive a WAV somehow, and buy a new production library? Any help would be appreciated.

While still at a radio station, I checked 'em all out and bought a Roland DM-80...super sound, uncrashable and reasonably priced, although it took a bit more time to learn than the AKG/Orban. Then, after going into biz for myself, bought another DM-80...the next day, Roland came out with the DM-800, which does many of the same things but for about $6k as opposed to $12k. And so it goes.

I've seen and used a few different kinds of work stations. Back when I was looking just like you are, I came up with SAW (Software Audio Workstation?). It's a totally software based digital workstation. After doing some intense research, even talking to the digidesign people (Protools and Session 8), it was clear that the future of digital production was in software based stuff. Many including Protools and Session 8 are "extra" hardware dependent. I've also heard about a new up and coming peice of shareware software. Look on Compuserve for a program called COOL-EDIT. It's an incredible two track editor that we use in our studio for phoners instead of a reel-reel. Takes about 2 minutes to learn it's most basic functions. The word is that they are coming out with multi-track editor sometime in August. I'd look into them really hard, if I were you.

>workstation. Does anyone have any preferences (and why?).

>I use the Protools. I does everything I want it to do and I Like it a
lot.
>I have no experience with any other system.

I have used the Roland DM-80 for over a year and I loved it UNTIL Dave Foxx at Z-100 showed me Pro-Tools for the MAC. Now I wish I saw Pro-Tools first, it allows you to do MORE! I like to make things tight on my promo's and the Roland can not cut it! I have 8 tracks and it is a pain! I can not move in pairs, can not mix-paste, etc....Lately I have been cutting the voice parts at the station, drop them on Dat, bring them home and edit on my home PC using Quad Studio, at least I know the edits will be tight and I do not have to worry about loosing phase if I bump an edit ahead. My advice: GET PRO-TOOLS and SMILE!

Hi Johnny,

Stay with the Pro-Tools, maybe up-grade to PT III. I've used a number of different systems and Pro-Tools is the best system for me. I've been recomending the Roland DM-8000 to my client stations as an inexpensive alternative and ease for of use. But since you already know PT you'd be best off staying with it. BTW, haven't seen you on CIS lately....'was 'sup 'wit dat!

How long will it take before it's considered to have "worked?" If I'm
not mistaken, the current configuration (99.1 KYLZ and 107.7 KYLD) has
been in place for over a year now. With KHQT going away, Wild 107
will be the only Dance/Urban/CHR station in the San Jose area. They
just picked up KHQT's old morning drive team, and (so far as I can
tell as a listener), response has been positive.

I went to last year's show and am planning to go to this year's too. The
Radio Show is all radio, unlike the spring NAB convention which is mostly
television. If you check out the NAB WWW site (http://www.nab.org) you'll
find a fax number you can call and get more info.

There'll certainly be a lot of sessions to interest programming people.

You forgot WCRB(FM), most of which is owned by a trust set up by the late Theodore Jones, the station's founder.

Also still locally owned as far as I know is WUNR(AM), which I believe is still owned by Herbert Hoffman and broadcasts from his building on North Washington Street.

Who owns WPLM these days?

FYI:

The EDGE is programmed by Brent Peterson, former PD of WWRX in Providence. The station is _consulted_ by Jacobs Media. The majority of the staff came from 'RX with their GM, Phil Urso - who's family sold 'RX for 10 mil a few months ago. This EDGE station and format has been in the planning for a while.

Live talent is expected sometime in August - so far they've received in excess of 300 tapes.

Okay...

A six-pack of your favorite ice-cold beverage will be delivered to your doorstep if your GREAT (not "good") night show idea gets me a "kudos" note from my PD here in Lexington, KY. His panties have been in a wad lately, and I'm looking to finish off my 1-2 punch to the competition--a heritage country with a PRE-RECORDED voice on Monday-Thursday nights. (How they got to be #1 without a live DJ befuddles the hell out of me!?!?!!!)

I do a hot, audience-interactive show at night--as much entertainment as possible ALL while squeezing out at least 15 songs and 10 spots each hour! Ooohhh, the pressure's on!!! I was doing a "Partyline Phone Poll" question just about every night, but I soon ran out of good questions that yield short answers (to fit over record intros)! I wanna get this back on track, but I need your questions (i.e. 'What song best describes your sex life', etc.)!!!! Then, I do a "Top 8 at 8" countdown (most requested songs of the day). Then, a request/dedication show from 9-11p. But its days are numbered--I need a new variation, a new twist on the old "Request Express" I have running now..

That is your mission...should you choose to accept it...I'm serious about the brew!!! Thanks in advance for your stuff!!!

Fred -
I keep finding your replies in different sections and you are right as far as you went. No there will be no spacing down from 10 to 9. There is no need for the extra spectrum with oncoming compression technologies. Other commenters citing the European model seem to forget that we share N. America with other countries who are at 10 and want to stay there - Canada and Mexico. When this idea was finally killed at the FCC in 1981, it was partly because we had treaty obligations to consider - something that the proponents of 9 kHz conveniently leave out in their rush to blame greedy capitalist pig broadcasters who don't want to allow the homeless, poor people, illegal aliens, and Walter Mitty into broadcasting.

From: csgro@electro.com
Message-ID: <3upn86$6cd@vixen.cso.uiuc.edu>
Source record: 30292

I am going to be in San Diego for the Borland Developers' Conference August 9 through 12 and intend on trying some AM DXing while I'm there. I'll be staying at the Hyatt Regency (tall, expensive, downtown hotel, most likely with unopenable windows). I've never done any hotel DXing or West Coast DXing before and I'm looking forward to the opportunity to add some new states or Latin-American countries to my list. I'll have either a Sangean 803A or a GE SupeRadio 2.

Can anyone give any pointers on the best way to approach this or what I am likely to encounter?

Also, are there any San Diego radio station people who would be willing to show me around their station while I'm down there?

Source record: 30293

Geez... Sorry to be flooding the group with naieve questions (can you tell I'm new in the biz?), but ...

This is going to sound absolutely ridiculous...

One of the stations I'm doing production work for wants to present a very ultra-modern super-mega-over-hyped image. In their liners that I'm doing, I'm planning on incorporating some scattered radio quasi-static. That is, I'm planning on using bits of sound not unlike what you'd hear if you rapidly swiped all the way across the dial on an old analog AM radio in a low-density area (but with better EQ and in stereo). I'm trying to be as lazy as possible and avoid making my own production elements by actually DOING the swipes (and processing them, and finding hit and stop points in the recording...), but so far my search has yielded nothing.

Now for the ridiculous part...

Is there a production lib out there with this sort of thing on it? I mean, I suppose I could take any average white noise clump and fold it a few times, but I don't have the time for that. If I could find a library or collection with this sort of "staticy" thing on it and extra radio-related sound bytes from non-radio-related sources (know what I mean?), I'd be eternally grateful to whoever pointed me at it.

Thanks in advance to anyone who can even give me a clue here.

: the imagination."

I'd define jazz as musical improvisation based on an underlying theme
which runs through the piece. Brubeck/Desmond's "Take Five" long version
fits this definition. So do numbers such as the Joe Pass takeoff on the
"Flintstones" theme song. But whale music? No way, Jose'.

Please...
'Smooth Jazz', 'excelence in broadcasting' they're just names, made up by the 'broadcaster' not the 'consumer'. It is neither Jazz nor Excelent.

It's a bunch of guys sitting around a table saying, what will make us money. We'll tell people that they are unique, so they should listen to what everyone else is listening to.

Whether the consumer calls Barry Manilow jazz or not is irrelevent. It's not Jazz. It will never be Jazz. Remember the consumer voted in a republican congress. They'll do what they're told. Rush has proved this over and over again. Tell them you're the most listened to, and they will continue to listen. Tell them they like what they hear and they will like what they hear. The American consumer has no mind of it's own.

Tell them it's jazz, and they will believe it's jazz. Tell them to duck and cover, and they will believe they can survive.

>The consumer -- who listens to these stations, buys the cd's, and attends
>the concerts -- calls this music Jazz. Overwhelmingly. No hesitation.

The consumer calls it whatever the record company and radio station hype
tells him to call it (see you point immediately following). That still
doesn't make instrumental pop "jazz" by any stretch of anybody's
imagination (other than the marketing geniuses who came up with the idea
origninally).

>Many of the radio stations which play the music are heavily researched. If
>even a meaningful =fraction= of the audience were to say, "We listen because
>we like what you're doing, but we don't think you should call it Jazz",
>those stations would =stop= using the word. It's that simple.>

>Alan Freed says:
>> "It's a misnomer. What really is smooth jazz? It's "happy jazz" ..."
>
>Bzzzzt! Sorry. If that term resonated with the consumer, that's what it
>would be called.

If we had any semblance of a decent music education in this country, they
wouldn't even call it something as kind as "happy jazz." But that's
another argument. And, again, "smooth jazz" resonates *only* because
consumers have been brainwashed; if the record co's had been more honest
from the start and called it "smooth pop" or some such, *that* is what would
resonate.

[deleted material on WNUA]

>Alan continues, before going completely off-topic:
>> "... an original American music genre with its heart and soul ripped out."
>

>Every musical genre either evolves or else simply dies, frozen in time.
>Jazz continues to evolve.
>
>If those who don't like the direction of its progress want to make snide
>remarks about it, that's fine. They are only offending the fans, while
>failing to make a point to anyone other than those who already see things
>their way.

Two final thoughts, getting way off group topic (but following the thread):

Jazz, *real jazz* has indeed continued to evolve. There are several
great examples (right Jim's hometown of Chicago, among other places) if you
bother to look.
There are even a number of talented artists who defy categorization, though
they have firm roots in jazz. But evolution of that nature is something
the industry can't deal with ("if we can't label it, we can't sell it"
apparently).
And thus, my final point is that most popular music has reached a stage
where it draws on influences from any number of traditional genres.
Categorizing bands these days is *only* a marketing exercise (whether
we're talking about rock, country, jazz, pop, etc.). Image is everything
in terms of mass popular acceptance, and that image often has little
in the way of a clear relationship to the music itself being talked about.

[much deleted]

>The consumer will define the terminology. It's that simple.

The marketers will define the terminology. Most of us don't care, except
when we have nothing better to argue about on a hot summer day.

# 1299. Sony Jukebox's & UDS Cards Wanted

Newsgroup: rec.radio.broadcasting
Date: 1995-07-22 00:00:00 UTC
From: wixc973@aol.com
Message-ID: <3upn8d$6cn@vixen.cso.uiuc.edu>
Source record: 30299

Reply-To: wixc973@aol.com (WIXC973)

We are interested in buying a few used Sony Jukebox's (CDK006's) along
with the UDS interface card and cables. These are the 60 slot machines.
If you are up grading and need to get rid of your old machines, perhaps we
can help each other.
Please e-mail info to wixc973@aol.com or phone 517-892-9700 and ask for
John Dakins or Geary Morrill.
Thank you kindly,
John

HEY ALL,
My name is JOHN E. KAGE, & I do afternoon drive in ST.
CLOUD, MN.
at KCLD, about an hour north of the TWIN CITIES. I also have the job of coming up with all of our sweepers, wich is fun, but right now i'm stale. if anyone has heard any good ones lately, I'd love to see em'! NETWORK 40 comes out witha couple pages of them once a year wich is cool, but we can also do it right here.
I'll list a few I've come up with, if you could too, you'd be doin' me a BIG favor.
thanks!

JOHN E. KAGE

KCLD / ST. CLOUD, MN.

1. 104.7 KCLD, ALWAYS ALOTA FUN, UNTIL SOMEONE LOSES AN EYE!
2. 104.7 KCLD, WE'RE WEARING FRESH UNDERWEAR, IN CASE YOU GET IN AN ACCIDENT.
3. 104.7 KCLD, STARRING 10 SONGS IN A ROW EVERY HOUR..NOW PLAYING AT A SPEAKER NEAR YOU.
4. YOUR SPEAKERS HAVE GOTTA FEVER OF A 104.7...KCLD
5. 104.7 KCLD, OFFICIAL RADIO STATION OF THE ATLANTA SUMMER OLYMPIC GAMES.
6. REMEBER...FRIENDS DON'T LET FRIENDS DRIVE...WITHOUT 104.7 KCLD

Yep. Jaycor.

In addition, they just bought WDUV, the 100kw beautiful music station licensed to Bradenton, just on the other side of the bay. I understand they'll be moving the 'DUV studios to Tampa. Along with WDUV, they acquired WBRD(AM). No one seems to know yet what they're going to be doing with it.

# 1303. AM640/Q107 Toronto changes

Newsgroup: rec.radio.broadcasting
Date: 1995-07-22 00:00:00 UTC
From: pcuser@IMPRINT.uwaterloo.ca
Message-ID: <3upn8i$6da@vixen.cso.uiuc.edu>
Source record: 30303

Long time (9 years) AM640 morning drive partners Jesse Dylan and Gene Valaitis (formerly CFTR and Q107) are no longer co-hosting the morning show as Jesse has left the station. Probably not his own decision. Apparently they are still pals and the spilt is amicable. No official announcements yet. PD Danny Kingsbury even let Dylan say goodbye on the air this morning (7/18) between 7 and 7:30 am, suggesting he was let go. A true shame since their mostly talk ( 2 songs an hour) mornign show was laugh out loud funny and a breath of fresh air in the somewhat stale Toronto morning show arena .

Valaitis also hinted other changes are on the way. Probably dumping the last of their CHR programming in PM drive, evenings and overnights to become all-talk around the clock. There will be official announcements in the next few days.

Sister FM station Q107 (AOR) will be picking up Toronto Maple Leaf broadcasts this fall, the addition of new sports director Mark Hebscher certainly had some impact on this decision. The Mighty Q's solid 18-35 male numbers were a big factor in this coup. Telemedia's The FAN 590 is the big loser in this manouver as the Blue Jays are rumoured to be looking for a new home, possibly at legendary market leader CFRB 1010. The FAN's fortunes are already in sad shape as the Canadial Footbal League's Toronto Argonauts have moved to AM640. Perhaps more sports in the evening on AM640?

Steve S @Imprint, University of Waterloo, Ontario, Canada.

# 1304. UPS recommendations wanted

Newsgroup: rec.radio.broadcasting
Date: 1995-07-22 00:00:00 UTC
From: Greg Monti <gmonti@cais.com>
Message-ID: <3upn8i$6db@vixen.cso.uiuc.edu>
Source record: 30304

I�m in the process of purchasing more than 400 personal computers to send to radio stations for a satellite audio automation project. Since the PCs will be running OS/2, which is known not to crash gracefully during power failures, we want to recommend that the radio stations buy uninterruptible power supplies, probably in the 400 to 1,000 volt-ampere range for 20 to 30 minutes.

I�m not looking for recommendations by brand or model (although those are welcome, too), but I�d like to compile some advice from more experienced users about what to look for:

What chemical technologies are used in the batteries of contemporary UPS units? Is one better than another for a given application?

Are the users better off with a true UPS in which the AC to DC converter always charges the battery and a DC to AC inverter always runs the load from the battery? Or a fast switching UPS in which a coil of wire around a ferrite core acts as a flywheel to keep the 60 Hz AC output waveform going until a switch flips to power the load from the battery and inverter?

Are the units from computer supermarkets and mail order houses any better or worse than the ones from industrial computer houses that pitch the integrator/LAN installer markets?

Anything else we should look for or to avoid?

Thanks for your time and for your opinions. Please e-mail to me privately to keep newsgroup traffic to a minimum.

Brother Wease, to correct the spelling, is still alive and well doing mornings at WCMF in Rochester, and doing quite well in the ratings, much to my chagrin. He, WHAM and WBEE usually jockey for the top spot in the Arbitron morning numbers.

Yes, Brother Wease is still in Rochester, hosting mornings for 96 WCMF. While you may not like him, you have to respect his numbers. He continues to lead the pack with a 14.6 12+ Arbitron rating in the Winter book. Spring numbers are out next week... we'll see how he does.

I work for his competition, and we've never quite been able to overtake him in mornings. Plus, in three years, Howard Stern still has not made an impact in this market. Like him or not, the listeners continue to tune in.

Yep,
Brother Wease (short for "weasel," an old nickname for the fellow whose momma named him Alan Levin) is still alive and well on the airwaves at WCMF...he's locked in a tight battle for the #1 spot 12+ in morning drive, and owns the 25-54 demos in mornings in the Rochester market. It's theoretically AOR for-mat, but it's more talk (mostly humorous and a little on the crude side) than rock by far. Basically a fun show, and beating the hell out of Stern...his closest competitors are news/talk and CHR morning shows, all predominantly local content. (This town isn't big on syndicated stuff, at least before dark.)

Bob Smith, middays WXXI-AM 1370 Rochester NY

# 1309. WWRC AM 980 Changes

Newsgroup: rec.radio.broadcasting
Date: 1995-07-22 00:00:00 UTC
From: halem@access4.digex.net
Message-ID: <3upn8o$6dm@vixen.cso.uiuc.edu>
Source record: 30309

The source for the following is the 7/18/95 "On the Dial" Column from the Washington Post. It is not a direct quote, more of a summary.

Budget cutting by Greater Media (the owners of WWRC AM 980, talk) has resulted in the firing of the stations last two news anchors. George Papgiannis and John Meagley were replaced with news casts from Metro News. These reports will be heard during the day on weekdays. After 11 PM and on weekends, news will come from NBC Radio News. According to the article, WWRC's acting PD Jack Roberts said it was a cost cutting move and "'vendored news' is the wave of the future in radio." The article also said that two "respected" AM stations in Boston (WRKO and WBZ) had added vendored news casts.

The two outed anchors had both found work by last Friday. The article says Papagiannis was doing freelance work for WMAL-AM 630 (news/talk) and Meagley was working for (get this) Metro News and also for UPI where he was employed while at WWRC.

The article says that Jim Hawk will doing the AM casts and John Irving will do the PM casts.

Now my two cents... So far I couldn't tell that they were using Metro Networks. It sounds really good. When I heard a different newscaster, I though they had a personnel change. I was surprised when I read the article in the paper.

As always, comments are welcome!

-Mike

# 1310. Z-100 NY 2 days no DJs

Newsgroup: rec.radio.broadcasting
Date: 1995-07-22 00:00:00 UTC
From: Paul Richards <72212.441@compuserve.com>
Message-ID: <3upn8p$6dn@vixen.cso.uiuc.edu>
Source record: 30310

Over the weekend Z100 was promoting a need for parttime DJs and some
listeners were heard talking up records as on-air auditions.

Tuesday 7/18 from 10A-10 P and again today in midday and presumably all day
again there is just "that voice" (the guy with the non-ballsy voice who does
the image liners for 99x Atlanta,Z100 NY and everywhere else now it seems)
saying 'the boss gave the DJs the day off', 'right here we're supposed to give
a weather forecast, but the DJs are at the beach...it's great there' .

Just wonder the reason for the gimmick? Party to celebrate new ratings
(2nd 18-34, tied for 4th overall)? Station meetings? Contract negotiations
for all? Cost saving? A test to see if listeners like the station better
without ZJs?

I would dispute another posting that suggested Z100 has gone all the
way to modern rock. I just heard Bon Jovi's "Never Say Goodbye" and
they still play some dance stuff at night. While they ran sweepers over several
months "are you ready for New York's rock alternative?" either Z100 listeners
weren't ready, or it was an inadvertent promo for WNEW's format modification,
but that's another story already covered.

Paul Richards, watching NYC radio but not in an official r.r.b capacity

Over the weekend they promoted the day saying they need some new DJs
and even heard some people talking up records. Guess no one passed
the audition though.

WFLA and WFLZ are owned by Jacor. They also recently purchased WDUV/103.
3 with plans to move it to 103.5 aqnd upgrade it from Class C-1 to full
Class C status.

WSJT is owned by Florida-based Paxson Communications. They also own WHPT
("The Point 102.5") in Tampa Bay, as well as several other stations in
Florida.

# 1312. Unlurking

Newsgroup: rec.radio.broadcasting
Date: 1995-07-24 00:00:00 UTC
From: howellh@acad.winthrop.edu
Message-ID: <3uv6jc$pfo@vixen.cso.uiuc.edu>
Source record: 30201

From: Haney Howell

Subject: Unlurking

I've been lurking around for some time enjoying the list. Many names from "the old days" pop up, and the real-time discussions are informative and fun.

As a quick intro, I started in radio in 1958 while in high school at a 250 watt "coffee pot" that I helped wire up! Must admit that was a great time to get into the industry, as small towns thoughout the nation finally got their radio stations. Pulled jock stints in Knoxville, Savannah, Miami, Mobile, and other points south. Uncle Sam caught up with me, and after a stint in the Air Force, I wound up in India (that's another story!) where I caught on with CBS. The next years were either at the network or in Denver at KUSA and KCNC (ok, I'll date myself... they were KBTV and KOA when I worked there.) After another round at CBS in NYC and at Conus, I switched hats and entered education. Now teaching at Winthrop University and do morning news and some sports for the local AM/FM combo in Rock Hill. Also spent a couple of years recently at WSOC on the weekend desk.

In other words, I don't see how I can teach in a rapidly changing field and not be a part of it. (That will generate some fun E-mail from my academic fellows!) Oh, yeah. Got my "Ph.D." in news at ABC in the mid-70s. Worked as Charge Editor at the radio network with a great group of people.

To answer the obvious question from some, yes, I did receive tenure with a masters degree and the above experience. However, am finding promotion a bit harder to come by because it is more academically oriented. Have you read any of the academic journals lately? Among the arts and sciences folks at my institution, that's the only way to get credit.

I'm in search of a couple of old friends. Joey Reynolds was last at WSHE in Miami in my rollerdex. Any sightings? We worked together on the ill-fated all-night radio/television show on KOA in the early 80s. Also stuck my head in-to the studio a few times while he was at WNBC.

John Ogle. Last heard from in the Washington, DC area.

Any leads would be most appreciated.

Again, enjoy the postings and the contact with those who love the airwaves!

Haney Howell Winthrop University Rock Hill, SC 29733

Message-ID: <3uv6i2$pdf@vixen.cso.uiuc.edu>
Source record: 30205

>From Charm City...

Spring '95 Ratings

Station Spring Winter
1. WPOC-FM (Country) 8.5 8.1
2. WBAL-AM (News/Talk) 8.4 7.4
3. WLIF-FM (AC) 6.8 6.2
4. WWMX-FM (AC) 5.6 5.6
5. WQSR-FM (Oldies) 5.3 5.5
6. WERQ-FM (CHR) 5.1 5.5
7. WHFS-FM (Progressive) 4.9 3.4
7. WXYV-FM (Urban) 4.9 6.1
9. WOCT-FM (70's) 4.0 3.6
10. WIYY-FM (AOR) 3.9 4.0

Among the news this week, Brian Wilson, PM Drive at WCBM (News/Talk), has left the station. No reason was given but the hot rumor is that he will resurface as WOCT's new morning man. Brian Wilson once did mornings for WOCT (then a different format and call letters) as part of the popular Brian and O'Brien morning show. No word yet on a replacement for Wilson at WCBM.

Lisa Callahan is the new afternoon drive personality at WJHU hosting All Things Considered. Callahan was at Metro Traffic before joining WJHU. She starts in a couple weeks. WJHU just recently dropped classical music to switch to a talk format.

Stay tuned,

Jim Purther
Metro Networks-Baltimore

# 1317. Where are they now from WLS/WCFL/CKLW??

Newsgroup: rec.radio.broadcasting
Date: 1995-07-24 00:00:00 UTC
From: TRRadio@aol.com
Message-ID: <3uv6jf$pfu@vixen.cso.uiuc.edu>
Source record: 30206

A couple of months ago, I asked for some help on where the alums of these great midwestern Top 40 giants might be. With some help from my friends (pardon the pun), here's what I've come up with:

WLS (Stands for World's Largest Store) & WCFL (The Voice of Labor)

Larry Lujack (AM & PM Drive) - Retired, lives out West
Fred Winston (AM Drive on WLS) - Talent Agent in Chicago (Check out his ads in R & R)
Bob Sirott (PM Drive) - Host of 'Fox Thing in the Morning' on WFLD 32/Chicago.
Art Roberts -
Chuck Buell -
John Records Landecker (Evenings 'Boogie Check') - Was in Toronto & Cleveland doing AM Drive in the 80's, back in the Windy City at WJMK/Oldies 104
Jeff Davis - Voiceover talent and PM Drive at LA's Star 98.7/KSTR. Also worked in LA for KRTH and KCBS-FM before their change to the ARROW.
Yvonne Daniels (Overnights) - worked for a couple of other Chicago stations before dying of breast cancer a couple of years ago.
Tommy Edwards (Middays) - became a PD for CBS in Boston and now Los Angeles. The person behind the ARROW format.

CKLW

Brother Bill Gable (Afternoons) - is AM Driver in Orlando at WOCL/Cool 105.
Big Jim Edwards - Now owner of Oldies 107.1 in Long Branch, NJ
Dave Schaffer -
Tom Shannon (Mornings/Middays) - worked in Detroit and Buffalo during the 80's, came to CKLW-FM in the late 80's-early 90's, current status unkown.
Chuck Morgan - Worked in Cincinnati in 1972-73, now ???
Charlie Van Dyke - Alive and well doing voiceovers from Phoenix, AZ.
Ted Anthony - Still in the Motor City doing voiceovers
Max Kinkle (Super Max) - Ex WCBS-FM overnight personality
Johnny Williams - Was host of 'Pillow Talk' in Detroit at WNIC & WOMC, not sure where he is now--Cleveland is one possibility.
Ted Richards (Evenings)- was in both Detroit and Toledo, currently missing in action.
Pat Holiday (Middays) - was in Cincinnati for a time in the 80's, now ????
Dick Purtan (AM Drive) - Still doing AM Drive in Detroit

and now CKLW 20/20 news:
Byron McGregor - Died last January.
Grant Hudson - owns Voicehouse, a voiceover company.
Joe Donovan - Morning anchor for CBS o&o WWJ-AM in Detroit.
Jon Belmont - Anchor for ABC Information Network.
Rabdall Carlisle - Worked in TV in Salt Lake City, Minneapolis & Houston.

Presently unaccounted for.
Keith Radford - Worked with R. Carlisle in SLC, now in Buffalo.
Steve Madely - In Ottawa.
Marc Daly - now at CITY-TV in Toronto.
Len King - with CNN in Atlanta.
Bob Loesure - CNN anchor
Lee Marshall - went to LA at KHJ and KMPC. Now sure where he is now.
Art Riley - Ran the Texas State Radio Network.

I'd like to thank everyone who helped out with this project, especially
Michael Lewis and Grant Hudson. I hope it brings back some memories.

Tripp Rogers

# 1318. WJML--Looking for Info on Former DJs--Tim Nixon &/or Mark Singer

Newsgroup: rec.radio.broadcasting
Date: 1995-07-24 00:00:00 UTC
From: Sue Scally <sscally@cc.wwu.edu>
Message-ID: <3uv6jg$pfv@vixen.cso.uiuc.edu>
Source record: 30207

Talk about your long-shot postings ...

I'm looking for information on two DJs who worked for WJML (Petoskey, MI) in the mid-1970s.

Both men were tremendously kind to me at a time when kindness was in short supply in my life and I never really had the opportunity to say "thank you." I guess nobody really understands a 13-year old's "sturm und drang" like that voice on the other end of the request line, right? Nevertheless, both Tim and Mark went beyond the call of duty and for that I will always be grateful.

I've checked most of the databases I've been able to find referencing on-air personalities, but have come up empty, so any help you can provide would be greatly appreciated.

Written July 22, 1995

KQRC PROMOTION BREAKS LEG, WINDSHIELD
A noon-hour cash giveaway in downtown Kansas City resulted in a broken leg for one woman, and a smashed car windshield for another.

For the KQRC "98.9 The Rock" promotion at 12th and Walnut streets on Friday (July 21), morning DJ Johnny Dare stood atop a KQRC van, throwing away rolled-up dollar bills to the crowd. The station planned to give away a total of $5,000.

Police estimated more than four thousand people showed up for the event, according to one report. Another report, in the Kansas City Star, said "hundreds" of people were at the event.

A KSHB-TV report on the event, which did not mention KQRC's call letters or slogan, included an interview with an unidentified man who said he had been poked in the face repeatedly while Dare was pitching money to the crowd.

The woman whose leg was broken was treated and released from a Kansas City hospital. It is not known whether the station offered to pay her medical expenses.

The station did offer to cover the insurance deductible, but not the entire amount of damage, for the woman whose windshield was smashed in. The car suffered other damage as well, estimated in the thousands of dollars.

KQRC had obtained the requisite permits and hired off-duty police officers to provide security for the event. Still, on a KCTV interview, police spokesman Capt. Vince McInerney expressed some irritation with the promotion, noting that all downtown beat officers had to be dispatched to 12th and Walnut for crowd control.

The KQRC promotion also occurred just two hours after a fire at the Commerce Tower (home of the backup transmitter for KPRS(FM)) at 9th & Main. Downtown traffic was still snarled from that incident when people began arriving for the KQRC event.

KXTR BOYCOTT UNDER CONSIDERATION?
Supporters of the Kansas City chapter of the Gay and Lesbian Alliance against Defamation (GLAAD) are considering a boycott of KXTR(FM) owner Robert Ingram.

According to an article in the Kansas City New Times, GLAAD supporters Carol and Gary Smith submitted photos and an article of a GLAAD event to The Independent, a society newspaper owned by Ingram.

According to the New Times, The Independent's editor told Carol Smith that the publication would not accept Smith's information because the event supported an organization dealing with gay issues. The event, in Kansas City's swankest suburb, Mission Hills, Kansas, was a fundraiser featuring one of GLAAD's national field directors.

The New Times quoted Ingram as saying The Independent had a stated policy of reserving "the right to accept or reject any editorial material submitted for publications, including photographs." According to the New Times, Ingram is standing by the decision not to publish an article or photos from the GLAAD fundraiser.

The New Times reported, "the Smiths and others are considering urging readers, listeners and advertisers to boycott all of Ingram's businesses." Aside from classical station KXTR, Ingram also owns the monthly magazine Ingram's and has extensive real estate interests in Kansas City.

---
Elsewhere in Kansas City radio over the past three weeks:

* KCMO(AM) and KMBZ(AM) program director Mike Elder has left the station. Elder is now program director at the legendary Minneapolis full-service station WCCO(AM).

* The Royals radio network is featuring Negro Leagues legend Buck O'Neill in 30-second vignettes between innings. O'Neill reminisces about the Kansas City Monarchs and other teams in the Negro Leagues during his broadcasts. O'Neill, 83, was a major contributor to Ken Burns' PBS series on baseball.

* KZTO(FM), soon to be KCHZ(FM), has finally applied to move its transmitter site closer to Kansas City. The Lawrence-based station, presently silent, has been purchased by chain owner Frank Copsidas and plans a fast-paced modern rock format on the 95.7 frequency. However, questions persist in the Kansas City market about Copsidas' ability to get the station on the air. An earlier August target date has now slipped to September.

A couple of TV notes as well:

* KSMO-TV was off the air four days earlier this month after repeated lightning strikes to the station's antenna damaged the transmission line. Since July 12, the station has been back on the air with a backup antenna and transmitter. KSMO-TV will leave the air again this weekend for permanent repairs. KSMO-TV broadcasts Kansas City Royals games when it is on the air.

* The dormant allocation for channel 32 may finally see some activity. The construction permit has gone through several hands since it was first granted in 1990. Now, the Kansas City Star is reporting that Quincy Jones Entertainment may buy the station. Musician Quincy Jones and partner David Salzman already own a New Orleans TV station. Salzman told the Star that, if a deal is reached, it would be late this summer. Salzman added that QJE might consider leasing the station to another broadcaster.

> quality of the received signal 99% of the time.

Another reason, according to the man who built the Big 1220/WGAR in Cleveland (now WKNR), CE Robert Reymont, is that the AM chips that roll off the frequency are about 50 cents in quantity, and the ones that offer true 15 khz frequency response cost about $21.

I had an opportunity, in 1981, to listen to WGAR, WWWE and WJW in AM Stereo on a hand built AM receiver that used a full fidelity chip...it sounded fuller, cleaner and more defined than WGCL, WDOK or WDMT...on FM! It was amazing!

I don't know if AM stereo car radios bother to comply with AMAX, but at least one of the stations that uses the system -- KFRC/610 in San Fransisco -- sounds quite good on our Infiniti Q45's Bose AM stereo radio.

>It's a shame that it hasn't caught on, although I suppose one doesn't

>anyway). I'm waiting for the expanded frequencies, too, (up to 1710
>kHz) but I'm not holding my breath.

In fact, Los Angeles sounds terrific in AM stereo. Almost all the stations have it. On an AM stereo car radio, it makes them sound much more lively and FM-like. Two I can name, KLAC/570 and KRLA/1110, play music and sound terrific (especially KRLA). Up where I live in the Bay Area, two of the Spanish music-formatted AMs are stereo, and they sound quite good too.

The expanded band is an interesting development, but at the end of the band where coverage is worst for the watts. Don't expect much.

Doc

The AM sections in car radios are not very sensitive. The 88 Ford F150 truck was fair. The 1994 Ranger I have is even less sensitive. My friend's 92 Toronado with the fancy color CRT touch screen radio is even less sensitive than that. Who cares if it has AM stereo. You'd have to be almost in sight to have decent audio. The old 1967 Chevy truck I had had a very sensitive truck and the 58 inch whip I had on it helped. It had a nice bandwidth too. The Delco radio in my 56 Studebaker is even better. The GE SuperRadio III sounds good, but there is a substantial lack in quality control. It doesn't take much to make a decent radio. There's just too much attention to fads and how "COOL" something looks.

Check out our ever-expanding web page - http://radio.aiss.uiuc.edu/`rrb/

The AIRWAVES Radio Journal (Formerly published as the Internet Radio Journal) is a periodic email digest dedicated to discussions of broadcast radio, from a professional and quazi-professional perspective. Subscriptions to Airwaves are free, and available via electronic mail (email). Subscription information follows later in this document.

In addition, all articles in AIRWAVES are ported to and from the Usenet newsgroup rec.radio.broadcasting (r.r.b) which was founded in April of 1992, as a means to further discussion of topics pertaining to 'domestic broadcast radio'.

By domestic, we mean broadcasts which are intended, primarily,for reception in the same country/nation in which they originate. AIRWAVES and rrb, are international in scope, and the term 'domestic' should not be taken to imply 'USA' or even North American. Readers in other nations are encouraged to participate.

```

___) | |_| | |_) | | __/ (__| |_\__ \
|____/ \__,_|_.__// |\___|\___|\__|___/
|__/
```

Appropriate topics include (but are not limited to)..

) Formats and programming.
) Engineering & technical matters and interests.

) Community broadcasting.
) Pirate broadcasting (especially non-shortwave, domestic pirates).
) Legislation affecting the industry, and its 'offspring' industries.
) Technologies affecting the industry, and its 'offspring' industries.
) General station information. Who is going on and off the air, and why.
) Radio's historical and cultural significance.
) DXing (long distance reception) on the standard broadcast bands.
) Radio's current and future trends.
) Political and news coverage and its impact.
) Job openings and help to those seeking work in the industry.
) Information on equipment and techniques involved in transmission and reception of broadcast radio signals.
) The International Scene and how broadcast radio is shaping up in the various nations of the world.

**********

One of the main goals of AIRWAVES/rec.radio.broadcasting is to act as a bridge between the radio broadcast professional, the listener, and those who are up-and-coming broadcast Professionals. Groups who often lack any real insight into each other's "world".

1) The radio professional. S)he lives *inside* the walls of radio. While dependent upon the listener (or more accurately the overall number of listeners) the Broadcast Professional (BP) is somewhat separated from the end user by virtue of his/her "point-to-multipoint" position. AIRWAVES offers the BP a glimpse into the real-world of the listener, un-filtered by consultants, ratings, trend-reports, trade pubs et-al. Sometimes that world is a little rougher than the broadcaster is used to, but that is the reality of 'the real world' sometimes. We do try to maintain a civilized environment, though, and filter out the most offensive brainless or off-topic posts (more on this below).

2) The radio listener. The listener is also in a similar (albeit inverse) position. The listener has relatively little actual input into radio programming. They often have only a vague idea of what makes a radio station tick. By communicating directly with broadcast professionals (and para-professionals) the listener gains some insight and understanding into the world of the broadcast professional.

3) The 'wannabe' broadcaster. AIRWAVES/r.r.b gives those with a strong interest (but little or no experience) in the industry the chance to interact with, those who have made it in the business. We also post resumes and 'help/positions wanted' ads for interested parties.

AIRWAVES/r.r.b is loosely moderated, as alluded to above.

Our philosophy of moderation is to 'err on the side of permissiveness'. We do not believe in censorship and never kill a post because We don't believe in the poster's opinions. We take great pains not to unduly

restrict dialogue or the poster's right to express him/herself, while
at the same time attempting to provide a professional-level
environment free of unnecessary noise (a daunting task).

```

|___/
```

Matters that may cause an article to be rejected, include...

* Articles which are not on (or reasonably near) the group's charter.

* Articles that are too long for submission as-is. We have a soft
limit of 8000 bytes (*kbytes) and a fairly hard llimit of 10,000 bytes
(10kbytes per article for the Digest. We will post longer files in
the newsgroup, but all sites may not carry longer items.

* Articles which are merely multiple repetitions of an identical answer which
has already been offered several times.

* Articles which contain 'miles' of quoted and multiple quoted text followed
by a few lines or less of original text. Please edit quoted text to a
minimum and try to adhere to the *50% rule*, that is 51 (or more)
percent of original text to 49 (or less) of quoted text.

* Articles that solicit for funds or contain blatant commercial content.

* Articles which are unwarrantedly offensive, abusive or contentious for the
sake of contention. Personal attacks and ridicule are considered such.
Discussion, even argument, of issues and opinions are welcomed and
encouraged. However personal attacks on individuals (no matter how
justified you might feel they are) are not part of our charter.

* * * * * * *

```
_ _ _____ ____ _

| _ | (_) \ V V / | | (_) | | __/ (_) \__ \ |_
|_| |_|\___/ \_/\_/ |_|\___/ |_| \___/|___/\__|
```

1) Post via rec.radio.broadcasting as you would any other Usenet
group. Your articles will find their way to AIRWAVES as well.

2) Email your article directly to articles@airwaves.com. Using other
addresses to post will needlessly delay your article. You might
consider installing an alias in your mailer for emailed articles,
especially if you post a lot of stuff. See the end of this file
for all applicable addresses.

```

```

AIRWAVES has a program called RadioWatchers, which is open to any
readers who are interested. Basically RadioWatchers are volunteer
staff reporters who write about the goings-on in their market or area.

RadioWatchers are expected to maintain at least one posting per month,
more as news warrants. For a complete file on the RadioWatcher
program, send email to radiowatcher@airwaves.com and tell us
about yourself.

```

Archives of past Airwaves Radio Journals are kept for retrieval via
FTP, Gopher or via the Worlkd Wide Web. Below are the paths for
these archives.

FTP - radio.aiss.uiuc.edu /misc/rec.radio.b-cast/
Gopher - radio.aiss.uiuc.edu 7070
W.W.W - http://radio.aiss.uiuc.edu/~rrb/

AIRWAVES JOURNALS (and the previous incarnation as Internet Radio
Journals) are stored in sub directories, each with their own index file.
Our archive site also contains files from a couple of our
other lists, as well as some interesting information not published
in AIRWAVES/r.r.b. Most files are compressed, so if you are using
FTP, use the binary mode to transfer.

Our Web Site has many other radio/media and general links in addition
to the archives for AIRWAVES publications. Do check it out. Let
us know if you have any other interesting links for us.

We hope you enjoy the group. Remember, it is only as good as it's
contributors. So don't be shy :-). If you have a question, or answer,
even if you are not sure, post - post - post.

We are open to suggestions on how to improve this group.
Send them via e-mail to wdp@airwaves.com

Thanks to all who have, and continue to, participate.
We now return you to your regularly scheduled newsgroup :-).

In article <3umpsh$m53@vixen.cso.uiuc.edu>, jtl@mcs.com (Joe Lynn) says:
>The Sony WMF-42 is still receiving precious little distribution
>after almost 2 years on the market. The only place I've ever
>seen one is at the Sony store on Michigan Avenue in Chicago.
>Where else can they be found? (Just curious, I already own one.)

That's actually the SRF-42. (A Sony model number starting with WM is a Walkman tape player.) Any good Sony dealer can get the 42, which lists for $36.95); I got mine from a Louisville dealer. Sony also lists the very common SRF-39 ($19.95 list), the SRF-H2 and HM22 headset radios, the SRF-M33 and M43 (with digital tuning), many of their AM/FM cassette models and several Sports models as having wideband AM capability; these are not AM stereo and are not claimed to meet AMAX specs, but should be better than average.

# 1325. Re: Is 9 kHz AM coming?

Lets see how much trouble I can get myself into:

In article <3uhpsp$sl4@vixen.cso.uiuc.edu>,
Fred.Weinberg.KTRT/KBIX.Tulsa.918-341-6600;fred@ktrt.com says...

>First, the idea of 9k spacing is not to allow more stations on the
>band. It is to conserve spectrum. I don't have any fundemental
>problem with lots of stations. But we have that now and people keep
>complaining about us taking jobs away when we need to make cutbacks.

9K spacing from what I remember was whined about by the "poor" South American countries who claimed they couldn't make the change. If we had the current frequencies starting at 530 and 9K spacing throught the new part of the expanded band we could have a lot of clearer stuff.

>Second, I would suggest that the complaints did not come from the NAB
>but from those of us who would correctly forsee the difficulties of
>changing a system of arcane engineering which, unfortunately, we have
>been stuck with for 40 years. Look at the problems we're having with
>the expanded band and you will instinctively know why going to 9k
>wouldn't work.

Yeah we have too many people whining about why they want an allocation. And don't forget. If you have 1000 watts at 540 lets say and migrate to the new band your 10,000 watts is a MAJOR power decrease. 5000 watts at 540 is more effective than 250,000 watts at 1660. And the skywave is FAR worse at the high end...

>Our problem now is twofold on am. First, we have created too much
>ambient interference on the band because of poor engineering
>practices. The AM band is only marginally better than CB Channel 19.

Thank the FCC...

>Second, we have an engineering structure which in many cases makes no
>sense. A much better proposal would be to limit all am power to 10kw
>(or even 5kw) but make the lower end 5kw so we don't have to worry
>about 250watt daytmers going broke.

EVERYONE would go broke in major markets that didn't have a 15 to 30 ground conductivity MINIMUM. The 50K station that had to cut to 10K would be gone. they could no longer serve their local market if it were any size at all. There would be only a SMALL night coverage.

WSB in Atlanta NEEDS every bit of the 50,000 watts to cover its market, and could use 250,000 watts at night. HUH? Look at the ground conductivity. It's basically .05 or LESS. Like near 0 in some areas. This means with 50.000

watts I could hear the 10K heterodynes on WSB at night on the tube type Fisher stereo I have. This was when my apartment was less than 5 air miles from the transmitter. Only WQXI AM was decent at night, and I was a mile or two from the transmitter. Here in SC the area where I am is basically a 2 at the very best. So cutting power would be just to cut their throat. I'm just under 5 miles from WVOC and I can tune in stations on 540 and 570 with no problem. I'm close to 1170 and there are DEAD spots in their coverage within a mile of the transmitter. 10,000 watts heats that sand nicely. When they are on their 2500 watts I don't hear them well and I am not 10 miles from them.

THAT, I'll bet, would make the
>NAB squeal, but it would be worth it.

Yeah, there would be the NAB-FM only. .
>

Fred, the ground conductivity is so bad here I can't hear a station in Hampton SC on 1270 (not that I'd want ot listen to WHBC) 70 miles away. I guess I could if I had a 300 foot long wire...but lots of areas have 4 or less. I think you have, what, an 8, maybe an 15 where you are? It's amazing what a difference that really makes. The Florida coast near Miami is an 8. I could hear the WQAM 560 in Jupiter about90 miles north of there...AT night NO skywave interference. 1000 watts night, non DA. WVOC 90 miles during the day north is hard to hear at all.

So one little power cut for everyone is just folly.

>just don't shell out the near $1000 for a premimum audio system from the
>dealer. They would rather go after market where there are NO AM Stereo
>radios or AMAX radio for that matter.

Now, Ron, I'm not flaming YOU, but this enhancement cost GM, Ford, etc, LESS
than what you pay to eat at a fast food restaurant. Um leave out the big
fries and you CAN'T have the Coke, BTW. And the standard fancy radios keep
getting worse and worse in the Ford's I see (on the AM band anyway) There is
simply NO excuse for it. But as we know, GM is not out to make cars, but to
make money. (This is a comment of a former GM top dog...) From what I heard
this wideband stuff had been already designed for the regular radios but was
nixed.
I'd like to see a return to making some good equipment instead of
cute styling. I'd like to see more AM Stereo chips in the other Sony radios.
The other thing is that they sync detector really helps in selective fading
and better overall audio. The GE SuperRadio III has really good audio at a
low price. Unfortunately so is the quality control. I'm on my third, and
it's so far off on calibration that I have to guess where I am. And the
tuning on the low end of the band (AM AND FM) are widely spaced and the high
end is all "skoonched up"....

Hmm any one wanna give me a Caddy or a Lexus (or whatever) with one of these
radios to test??? ]:) <---------devil faced smiley

Soem ABC staff have email address, and Triple J have their own email address, but none have web sites.

The only exceptions are SBS have a web site, so do Radio Australia, and their is a Triple J site run by a listener.

Please visit my site for further details.

## 1328. Help - automation software?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-24 00:00:00 UTC
From: jon105@aol.com
Message-ID: <3uv6ib$pe2@vixen.cso.uiuc.edu>
Source record: 30315

Reply-To: jon105@aol.com (Jon105)

Hi, I am putting together a small cable station and I want a good portion of it to be automated using a computer. Does anyone know of a decent software program that will allow me to do this without costing an arm and a leg? I ran across a demo for a program called "Desk Jockey", looked great but I can't get any more info on it. Any help is greatly appreciated.

>authorities. So they can use it even for a tornado or flood.

And on top of that stations are free to use the tones (and arguably should) on their own when they deliver emergency information. In Louisville one station, WHAS (AM), does this; of course they're the EBS primary and are monitored by all other broadcasters in the region.

I'm told some nuclear power plant operators, as part of the evacuation plans they are required to develop, have provided fixed-tuned receivers with tone decoders to all residents in their specified evacuation radius and have made arrangements for any evacuation order to be broadcast, preceded by the EBS Attention Signal, by a particular local station. In some of these cases the station has gotten an FCC waiver to allow them to send a special (non-standard) end-of-message tone to shut off the receivers bought by the power company.

# 1330. ZBM Radio Bermuda Reunion

Newsgroup: rec.radio.broadcasting

Reply-To: jlloyd7@aol.com (Jlloyd7)

I'm reposting this message because my last brought some leads but no hits.

Trying to locate several colleagues for a 40 year ZBM Bermuda reunion.

In Canada looking for Greg Poole, last heard of in Toronto and Jack Dodge,
somewhere in BC.

In the states, looking for Jim McLaughlin last heard of working in radio
in the Albany area.

They may all now be retired.

Any leads, post a message or E-mail:
Jlloyd7@aol.com

Thanks,

(Jay Lloyd, KYW, Philadelphia)

## 1331. Bob Aaronson's new show

Forget about DCC, that format was still born!

Everyone and his mother in radio still uses reel, whether they like to or
not! DAT is fast becoming the industry standard. Not everyone has a
computer in the studio ... yet.

I'm not an advertiser, but . . .

Since the stations keep on doing it, and I haven't seen one such station
go out of business yet, I would imagine that the advertisers probably
don't feel that strongly about the commercial free music sweeps.

The ad gets played, regardless, and most people favoring a certain type
of music probably won't twiddle the dial too much just to aviod
commercials. (If you wanted *really* commercial free music, wouldn't
you just play a tape?)

I'm really surprised to hear that WRQX has signal problems to the West
in norhtern VA. I've always been amazed at how well their signal
reaches North and East. I regularly listen to WRQX while travelling
North on I-95 and their signal is very good up to the Susquehanna
river and on warm summer nights reaches well into Delaware. I've also
heard them on many occasions just outside of Atlantic City, NJ.

I've notice that WQSR has very short spacing not only with WJZW in
Washington, but also a station on the SAME frequency (105.7) in York,
PA that is not more than about 50 miles North of Baltimore. It's
interesting to listen to 105.7 as you drive North from Baltimore.
When you go up a hill you hear WQSR, and when you go down a hill you
hear the York station. Why on earth did the FCC alllow these two
stations to be so close together? I think they are both full class B
stations.

YES! Cool-Edit is indeed a really cool (and almost free) audio editing program, which can also be found on the net (check out Yahoo). We recommend it to theme parks that use our digital audio sourcing equipment, and will be distributing it with our new AudioCue product that is aimed at radio stations.

...spoken like a true "acting" PD...

What's this product sound like? Sound bites? Voicers? Wraps? Or just quick copy? Is it just recycled TV audio, or stories generated by the staff for radio? And is it the same copy for all local affiliates, just read by different anchors who < insert call letters here>!

Thank God I'm in a city too small for something like Metro News. Of course we're also too small to have anything more than one "real" radio news operation (ours!) - all _9_ of us on staff. Geez, that's probably as big as DC Metro News. How sad.

Don't buy DCC - it's a dead duck. However, many radio stations will have DAT machines (and DAT doesn't compress the audio, which DCC does). Alternatively, some radio stations are using Sony's MiniDisc system as a cart replacement, so you might try that - note that it uses compression though.

Cheers,
Dave

Message-ID: <3uv6io$peo@vixen.cso.uiuc.edu>
Source record: 30330

Let's take this in order.

Rob, re your question on capital:

Banks are the last place you go because under normal circumstances, they won't loan you money unless you can prove you don't need it.

But before I get to the financing question, let me ask a Bruce Williams question: Does not having any collateral mean the same thing as loan me 100% of the purchase price? Because if it does, in 99% of the cases, forget it. Most people who want to get into business without any of their own money at risk never will.

I was able to because I had worked in another industry, saved about $100,000 and leveraged that. Whe I went through that, my family came up with $50,000. My first lender loaned me $35,000, noting that I stood to lose $150,000 of my own money if I screwed up.

In my case, I used a combination of seller financing (always available in the more desperate cases) vendor financing (if they want to sell you a transmitter bad enough, they'll finance it) and my own limited capital which I raised from family and friends. My reputation and track record didn't hurt.

I also made some major mistakes in the past and have learned to evaluate whether a property is merely an underperformer or a dog.

Next:

Ty, thanks. I would bet you can find a lot of dentists in San Diego (and other places) who invested in these "deals" in the 80's and would be glad to tell you about radio as a business---from their own limited point of view.

Next:

WARTUDOR, I agree. That's why we ended up in Las Vegas with KMTW (which we signed the purchase agreement on last week)

I'm going on an AM buying junket because the prices are right and I can make them cash flow using the new technology. Also, I can have fun in the states I'm in because I promise you I CAN have some political impact.

I just came from lunch (this is Saturday afternoon, July 22) with Congressmen Steve Largent and Jack Fields, he of telcom dereg bill fame.

I took a red eye back from vegas to Tulsa specifically to tell Fields that I very much want this bill passed in its current form lifting all radio ownership caps. Digital radio will remove signal barriers. I want spectrum in my markets and I want the same rules for me (as many AM stations as I want to buy) as for the big boys. If you live in fear of the future, you will always be living in fear. A famous man said that. Me.

Fields says that the probability of me getting my wish is now 97%.

So, I'll see you on the buying trail.

>The question is, since both CBS and Group W are active in many markets,
>if the merger goes ahead, what stations would the combined company sell
off.

>My LA prediction: All-news KFWB-AM/980 will go first.

IF the deal goes through ... it will take some time before it becomes
final. Group W is banking on a change in the rules that will allow it to
keep ALL or MOST of the stations. Congress is already holding hearings on
the changes. The only market it might have a problem would be Chicago
where Group W would wind up owning FIVE radio stations.

Even if the rules aren't changed...aside from Chicago...Group W could keep
ALL of its radio stations BUT some TV's would have to go. If you want to
take bets here I say the smaller markets would be jettisoned...perhaps
WCCO, KDKA, KMOX?

Online Tonight with David Lawrence has been purchased by WOR Radio Network, and is being moved from its old time of 9 to 11p on Sundays to 2 to 4p on Sundays, and is being renamed Online Today with David Lawrence.

The show's debut will be this Sunday afternoon at 2 on WOR, AM 710 in New York, as well as stations to be announced along the WOR Radio Network.

The phone number to reach the studio for questions during the broadcast will be 1-800-321-8828.

[Wow...what a serious post. Hope I get my sense of humor back before Sunday.]

..David Lawrence.....

# 1354. Re: Print Handicapped Radio

Newsgroup: rec.radio.broadcasting
Date: 1995-07-24 00:00:00 UTC
From: bobseybold@aol.com
Message-ID: <3uv6j1$pf6@vixen.cso.uiuc.edu>
Source record: 30341

Here in Toledo, OH, the local Society for the Blind operates SCAN (Sight Center Audio Network), a 16-hour-a-day, 7 day-a-week service providing readings of five daily newspapers, numerous national magazines, and some books. Some of the newspaper readings are done live, but much of the product is recorded for later broadcast. The service uses volunteers (myself among them) as readers. SCAN broadcasts on the SAP channel of the local PBS TV affiliate. That means anyone with a stereo TV can recieve the service with the press of a button. They also provide decoders for those listeners who do not have stereo TV's.

Yeah, Mike...those of us who work at KFBK will agree with you, wholeheartedly. Rick was with us for too short a time. He'll be in his realm in Seattle. KOMO is moving up and I congratulate them and him.

Dave Williams, KFBK
Mornings

## 1356. Scruff Connors?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-24 00:00:00 UTC
From: bl058@freenet.carleton.ca
Message-ID: <3uv6j4$pf8@vixen.cso.uiuc.edu>
Source record: 30343

Reply-To: bl058@freenet.carleton.ca (Dan Stark)

Can anyone fill me in on what's happened to Scruff Connors, last heard in the morning in Winnipeg?

I've heard that he's gone from his last gig in Winnpeg, but didn't hear what happened. Someone mentioned he'd been heard on Q107 Toronto recently, but I haven't heard him there. The Toronto Sun reported he got married and he and his new wife honeymooned in separate cities. Joke?

# 1357. Seattle Music Available for Airplay

Newsgroup: rec.radio.broadcasting
Date: 1995-07-24 00:00:00 UTC
From: dobuchanan@aol.com
Message-ID: <3uv6j4$pfc@vixen.cso.uiuc.edu>
Source record: 30344

Reply-To: dobuchanan@aol.com (DOBuchanan)

I represent some really great up and coming talent in the Seattle area and would love to have the opportunity to provide copies for airplay to any and all interested parties. The music is rock and roll, some grunge oriented and some not - take your pick. Write me directly if you are interested. By the way, I do this for free, I am not trying to make any money (yet), I just believe in what I am doing, and I love it and I think others would like the talent I represent. I welcome any comments you may have as well.

Sincerely,

Dean "O" Buchanan

# 1358. OOPS! We forgot to sign off / cut power / go DA!

Newsgroup: rec.radio.broadcasting
Date: 1995-07-24 00:00:00 UTC
From: powell@scsn.net
Message-ID: <3uv6j5$pfe@vixen.cso.uiuc.edu>
Source record: 30345

Am I just lucking out, or am I finding stations that have just "forgotten" that they were supposed to sign off a 50K daytimer on 1080? I found a 10K DA daytimer on 1190 and they forgot to sign off and the person baby sitting all 3 stations had NO idea what I was trying to tell him when I called. Then I caught another 1080 in Louisville KY that forgot to cut from 10K. The local WTGH 620 forgot to cut from 2500 to 120 or so watts. I also have noticed that after they "sign off" they actually are not turning off the transmitter. And there's this nice hum. I also caught WGFS in Covington GA way after sundown at 5000 watts instead of 250. The previous owner said they do this habitually. Being this close to an FCC monitoring station might get them in hot wate....OH ...I forget there is no FCC....

Reply-To: MHz@bitstream.mpls.mn.us

Jim Smith shared his opinion by saying:
>It is the consumer who defines the terminology, not the self-selected critics<

I beg to disagree. The consumer does not have a 100k xmtr and a $100k promotion budget to convince everyone that Luther Vandross and Swing Out Sister are "smooth jazz." If "research" reports the consumer thinks smooth jazz is what it isn't, credit it to good (but misleading) marketing by the station. If the product was promoted as "beautiful music" (or whatever) that's what research would show consumers most likely call it. I hate stating the obvious.

>>What really is smooth jazz? It's "happy jazz"<<

Jim continued:
>Bzzzzt! Sorry. If that term resonated with the consumer, that's what it would be called.<

Sorry you read more into it than intended (and with a dose of attitude too!), that's what I called it for our discussion only, I didn't suggest the consumer would call it that. After all, we can see that smooth jazz stations, by their own definition, aren't about to tell the truth now, are they? :)

Jim's attitude continued:
>Alan continues, before going completely off-topic:
>> "... an original American music genre with its heart and soul ripped out."<<
>Every musical genre either evolves or else simply dies, frozen in time. Jazz continues to evolve.<

An evolution? An offshoot, perhaps. Jazz is rooted in emotion, hardship, life experience. I don't hear much emotion in Kenny G, etc. (not that I can't enjoy it for what it is, it just isn't jazz). Regarding "going...off-topic": Jim, it's too bad you can't understand my extended point concerning definition, labeling and marketing, which is precisely what this thread is about.

Jim's parting insight:
>The consumer will define the terminology. It's that simple.<

With the guidance of misleading marketing by radio stations. And we'll have to deal with it forever after!

Alan Freed

# 1360. How to find this radio station?

Newsgroup: rec.radio.broadcasting
Date: 1995-07-24 00:00:00 UTC
From: gmandel@netcom.com
Message-ID: <3uv6j7$pfg@vixen.cso.uiuc.edu>
Source record: 30347
Cross-posted to: rec.radio.broadcasting,ba.broadcasting

I am trying to find out the call letters and geographic location of an FM Radio Station. Specifically, I was out in western Nevada along Highway 359 which is California Highway 167 and I had tuned in 96.9 FM. I remember it was about 12:30PM on 7/6/95. I'm 99.9% positive it was 96.9 FM since that corresponds to another frequency I tune into the next county south of me.

My first thought was to look through Nevada yellow pages at a library, but if there's a more direct way, esp. through Internet means (ftp, gopher, etc.) I'd really like to know. TV guides and newspapers have listings of AM & FM stations in a given area, I'm wondering if that's available online.

Incidentally, the reason I want to make contact with the station is to see if they can tell me the name of this one tune that has kept bugging me since July 6 when I drove around this area to see Mono Lake. The announcer said it was by Dave Grisman. It may have been Dave Grisman Quintet as well since during my 3 hour drive through Nevada I heard several Grisman tunes.

This one tune has a repetitious accompaniment (primarily in the key of A-flat, I have perfect pitch). It is mostly an improvisation. Of all things, I just heard it again tonight in a Taco Bell in San Jose--they did not have an FM radio tuned at the Taco Bell, it was one of the subscriber services. This is definitely NOT elevator music. The song has a basic oom-pah-oom-pah, 1-and-2-and-3-and-4-and type rhythm.

Anyway, if you could provide pointers with the above information how to find an FM station given the above parameters and/or help me find this tune, I'd really appreciate it. Perhaps you might know what Dave Grisman tune gets a lot of play lately.

WFLA and WFLZ are owned by Jacor, based in Cincinnati.

> Also, a new radio station just started here (<1month ago) WSJT 94.1 lite
> jazz and some lite rock. Who owns it??

WSJT is owned by Paxson Communications (based in Clearwater but moving to
West Palm Beach). Paxson also owns three other stations in the Tampa Bay
area (WHPT-102.5 and two AM stations, WNZE and WHNZ).

Copies of this FAQ are distributed monthly to rec.answers,
rec.radio.info, rec.broadcasting, and other newsgroups; and are on
file at bloom-picayune.mit.edu in the file
/pub/usenet-by-group/news.answers/radio/old-time-faq. Updates may
occur more frequently than the normal distribution schedule. The most
current version is available by anonymous FTP from ftp.crl.com,
directory: users/lg/lgenco. See FAQ for more info on FTP, email and WWW
access.

---------------------

Table of contents:

Q1. What is "OTR"?
Q2. You haven't mentioned OTR music, why not?
Q3. Where can I buy recordings of old radio shows?
Q4. Which vendors have (lower prices) (higher quality) (faster
response)?
Q5. Are OTR shows rebroadcast? If so, where and when?
Q6. I remember a great show called (x). When was it aired?
Q7. Are there any books about OTR?
Q8. Does anybody trade tapes of OTR shows?
Q9. What's this stuff about Copyright?
Q10. How can I get my local radio station to broadcast OTR
programming?
Q11. I have some old transcriptions and tapes, how can I make them
sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are
different. Why?
Q14. Is there anywhere I can get a complete listing of all the
episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the themes of
OTR programs?
```

Q16. Is there a World Wide Web page (URL) or FTP address that I can access for more info?
Q17. How do I subscribe to the OTR electronic newsletter?
Q18. Can I get archived copies of old issues of the OTR newsletter?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your FTP site?
Q25. Your Digest and WWW pages only deal with Old Time Radio. Where can I get similar information about early TV?
Q27. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

---

Q1. What is "OTR"?
A1. OTR is an abbreviation for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the early 1950's. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures.

Q2. You haven't mentioned OTR music, why not?
A2. There was a good deal of "big band" and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. There is no restriction to discussing OTR music in the OTR Newsletter, however you would find much more discussion about this topic in alt.music.big-band.

Q3. Where can I buy recordings of old radio shows?
A3. There are several individuals and companies willing to sell tapes of OTR programs. A partial list can be obtained from my OTR WWW site or FTP address listed later.

Q4. Which vendors have (lower prices) (higher quality) (faster response)?
A4. Prices, quality and service differ somewhat among all vendors. Check with other subscribers to the OTR newsletter to learn of their experiences, then check with potential vendors.

A comparitive price chart, listing many vendors, is available at my WWW site.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the archive site, and my FTP / WWW sites.

Q5. Are OTR shows rebroadcast? If so, where and when?
A5. Yes, several AM and FM radio stations, satellite feeds and a shortwave station rebroadcast OTR. Check my OTR WWW page for current info, or download STATIONS.OTR from my FTP site. If you learn of other sources, leave a note!

Julian A. Smith (jsmith@blues.epas.utoronto.ca), Frank Passage (passage@pluto.dss.com) and Bill Pfeiffer left the following information:

For AM listening, try the brand-new National Radio Club's _AM Radio Log, 15th Edition: Complete Listing of U.S. and Canada AM Radio Stations_ (Mannsville, N.Y.: NRC, 1994). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price range: $20.00]

For FM listening, I'd suggest Bruce F. Elving's _FM Atlas_ (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has _maps_ of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx $1.00 s/h]

The M Street Radio Directory, M Street at 800-248-4242 or +1 212 473 4668 voice, or +1 212 473 4626 fax. The address is M Street Corp., 304 Park Ave S Floor 7, New York, NY 10010 USA. costs $29.95 + p/h,

Those lucky listeners living near Boston can have a periodic update of local OTR programming by sending email to Noah Schaffer, at nschaff@k12.oit.umass.edu. Noah will send you monthly OTR & Radio Drama updates, including program titles and station/frequency/time data.

Q6. I remember a great show called (x). When was it aired?
A6. Check with subscribers to OTR newsletter, or look through the program databases (WWW or FTP). Also see answer A14 below.

Q7. Are there any books about OTR?
A7. Yes, there are several books related to OTR. See my WWW page or FTP site for a list of some of them.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch <henry@g0gku.demon.co.uk> related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

Q8. Does anybody trade tapes of OTR shows?
A8. Yes. Check with subscribers to the OTR newsletter. My WWW page has a database of private traders as well. Leave a note in the OTR newsletter if you want to trade, or send email to me if you want your library to be listed in the on-line database.

Q9. What's this stuff about Copyright?
A9. The copyrights on most OTR shows have expired. A few copyrights have been renewed. Examples of the latter include The Shadow (Conde Nast) and some of Arch Oboler's productions. See my WWW site for the latest "common sense" and legal citations.

Q10. How can I get my local radio station to broadcast OTR programming?
A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase listenership and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us: "The days of radio being ruled by the artisians is over, and for some time now it has been in the hands of people who only look at the bottom line, so to reach them you must talk through public radio pledges, or through sponsors on commercial stations."

Q11. I have some old transcriptions and tapes, how can I make them sound better?
A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

Randy Riddle (Rriddle@aol.com) left this information:

There's a firm that sells archival quality turntables and sound processing units that can dramatically improve old recordings. Their sound processing unit runs around $300.

Audio 78 Archival Supplies
PO Box 187
San Anselmo, CA 94979
415-457-7878

Henry Brugsch <henry@g0gku.demon.co.uk> left this information about Digital Audio Format (DAT):

The dat-heads mailing list maintain an archive of all their material at the following site: ftp.atd.ucar.edu. Log on with the usual anonymous then, your routine password. head on over to /pub/dat-heads/ You will find a wealth of info up there. All the digests to the current day, and mike faqs, as well as market postings on equipment. Highly recommendable for anyone to get their feet wet in this media. Happy taping.

Q12. Are there any OTR clubs near me?
A12. Check the club listings in my WWW page, and leave a note in the OTR Newsletter asking about local clubs for your area. Send me email if you want your club listed.

Q13. I have some OTR tapes of the same program, but their dates are different. Why?
A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X minus 1 and Dimension X.

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program serial?
A14. Some of the larger vendors / collectors may have this data. If you find such a publicly available source, we can make it available in the Internet OTR file repository.

Some of the OTR Newsletter subscribers have contributed Program Logs for several well-known series. The logs are available at my FTP/WWW site. While you are there, check the online libraries; some collectors have very complete collections of various serials, and they are listed by name or date in their listings.

The "logs and publications" entry in my WWW page gives names and addresses of several vendors of these items. It can be FTP'd as sou_pub.otr. (Thanks to RadioJoe5@aol.com (Joe Coleman)). There is also a Netscape table of logs and log sources at my WWW site.

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of -The Ultimate History of Network Radio Programming and Guide to All Circulating Shows- (last supplemented in Oct 94). Jay's address is:

Jay Hickerson JayHick@aol.com
Box 4321
Hamden, CT 06514
(203) 248-2887 FAX (203) 281-1322

Q15. Is there any place where I can get a written synopsis of the themes of OTR programs?
A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of the themes, send them to the OTR newsletter for inclusion in one of our databases.

Jim Widner has contributed some synopses / introductions to various programs. They are on file at his and my WWW/FTP sites.

Q16. Is there a World Wide Web page (URL) or FTP address that I can access for more information?
A16. Yes, there is a growing number of WWW sites, as well as FTP sites and a Gopher. Each site contains different information, so you might want to visit them all. The sites listed below are good places to start, since the major OTR WWW pages have links or pointers to each other. If you learn of any others, I'd appreciate your informing me via email!

(1) My site:

World Wide Web URL:
http://www.crl.com/~lgenco/otr.html

FTP:
Anonymous FTP to ftp.crl.com
directory: users/lg/lgenco

(2) AIRWAVES E-Publishing's Site (courtesy of Bill Pfeiffer):

FTP:
Anonymous FTP to radio.aiss.uiuc.edu,
directory: misc/rec.radio.b-cast/OTR.

GOPHER:
gopher radio.aiss.uiuc.edu 7070
(select "OTR")

World Wide Web URL:
http://radio.aiss.uiuc.edu/~rrb

Q17. How do I (un)subscribe to the OTR electronic newsletter?
A17. To subscribe, send email
To: old.time.radio-request@airwaves.com
Subject: SUBSCRIBE

To unsubscribe, send email
To: old.time.radio-request@airwaves.com
Subject: UNSUBSCRIBE

(The body of the message is ignored in both cases)

Q18. Can I get archived copies of old issues of the OTR newsletter?
A18. Yes. The OTR Digests and Index are updated three times a week, and are accessible through the first two WWW pages mentioned above, or from the AIRWAVES anonymous FTP site mentioned above, or from the Gopher mentioned above.

Readers with a WWW browser can access a "smart" archive program. This program can sort and display old OTR articles by author, subject, thread or date submitted. Just the thing to use when you want to catch up on a discussion thread, without plowing through a lot of extraneous material. To access this service, point your browser at:
http://radio.aiss.uiuc.edu/~rrb/online.html

Q19. What is the best way to archive OTR programs?
A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2000 range, and used reel machines are becoming harder to find.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS) reel tapes. This may lead to a greater loss of signal (paraticularly high-frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time.

Some subscribers have mentioned Talking Book tape recorders as a possible archival method. These recorders operate at 15/16 ips (half the speed of a standard cassette recorder), and can operate in 4-track mode, thus giving up to 6 hours of play time on a standard 90 minute cassette. As yet, we have no info on long-term longevity of these recordings.

Don Coco (djc@crl.com) left the following information about sources for Talking Book type equipment:

The American Printing House For The Blind
1839 Frankfort Ave.
Louisville, Kentucky 40206
Tel. (502) 895-2405

Sells Braille and recorded books, 4 track recorders which record
at 15/16 IPS, and other products of interested to Visually
Impaired persons. Price of 4 track recorder around $175

I.R.T.I.
1411 West El Camino Real
Mountainview, Ca. 94040
Tel. (415) 961-3161 or (800) 322-4784
Sells all including Radio's, TV's with SAP, Reading Machines,
Computers ETC.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in
response to a query about finding used reel-reel machines:

You can also call Harris/Allied used equipment
division at 1-800-622-0022 or call Radio World
magazine at 703-998-7600 for subscription
information. Radio World is an industry trade and has
used equipment listings in the classifieds once a
month.

(Jim Blackie [jblackie@aol.com] indicates that the
Harris/Allied number has changed to: 1-800-300-0733.)

Q20. My old reels squeak. Why does this happen, and can I fix it?
A20. There are at least two causes for "squeaky reels" on a
reel-reel tape recorder. (1) The tape edge may be rubbing
against the rim of a distorted take-up reel, or (2) the oxide
may be sticking to your erase (or other) heads. If the former,
the least frustrating alternative is probably a new take-up
reel. If the latter, Fred Korb left this note:

If you have any squeaky reels that you would like
to recover, I will be glad to send you more
information on how to do it. Just send me a
stamped self addressed # 10 envelope and I will
respond. Send your request to: Fred Korb, c/o
Oldtime Radio Collectors and Traders Society, 725
Cardigan Court, Naperville, Illinois 60565-1202.
I am willing to help you preserve the sounds of
radio days gone by.

[Editor's note: Fred's method consists of a kit by which a
lubricating film can be automatically applied to the tape as it
is played. I tried it. Although temporary, it does indeed work!
I'd recommend it for those squeaky tapes that you wish to
re-record onto newer reels.]

Richard Fish <lodeston@bluemarble.net> also left this helpful
info about an alternative method:

HYRDROLYZATION is the culprit. The tape material -- the
backing, or the binder compound used to stick the

magnetic particles to the plastic backing -- has absorbed water from the air. The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.

WHY SOME TAPES AND NOT OTHERS? It depends on the formulation of the plastic backing and binder. In the mid-70's, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-80's. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.

WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:

Bake the tapes in a convection oven for 8 hours at 130 degrees Fahrenheit. It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water. So the best deal is to bake the tape and immediately make a copy. But if you forget to do it and it re-hydrolyzes, you can bake it again.

Q21. Where can I find more information about antique radios?
A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono newsgroup, created by Bill Robie. A pointer to his FAQ may also be found at my WWW site.

The WWW site, "The Bellingham Antique Radio Museum" is also available through my WWW site, or directly via URL http://www.pacificrim.net:80/~radio/ This site contains info and GIFs on old radio hardware, as well as soundclips (.au files) of OTR show intros.

The University of Maryland also has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through my WWW site, or directly via the URL:
http://www.itd.umd.edu/UMCP_Libraries/BPL/bpintro.html

Q22. What is the best radio / antenna to get distant OTR stations?
A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios. A SuperRadio FAQ is available at my WWW / ftp site.

-Some- readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Dan Hughes <dhughes@prairienet.org> left this note:

Several years ago one of the electronic magazines ran
plans with dimensions and number of turns, etc to build
one of these antennas. I have built several and I'm no
mechanic. If you (or anyone else reading this) would
like a copy of the article and plans, drop me a stamped,
self-addressed envelope: Dan Hughes, P.O. Box 933,
Urbana IL 61801.

If you are interested in AM Broadcast Band reception, and technical artlcles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY 13667-0164

Q23. Is there a group for modern radio drama ("new-time radio")?
A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you. Here is a list of some of the WWW pages for radio drama:

Atlanta Radio Theatre Company: http://www.webamerica.com/artc
ZBS Media? http://www.zbs.org/zbs.html
LodesTone Productions?
http://www.bluemarble.net/~lodeston/lode.html
Midwest Radio Theatre Workshop?
http://www.thoughtport.com/tpa/non/mrtw

There is also a mailing list for folks interested in current radio drama:

Send email to: majordomo@world.std.com
Subject:[blank]
text: subscribe radiodrama

Q24. I have only email access to the Net. Can I still get the files at
your FTP site?
A24. Maybe. There are several FTP-by-email servers. Contact one of
them for instructions.

ftpmail@decwrl.dec.com
with no subject line,
and two-line body with line one help and line 2 quit

ftpmail@grasp.insa-lyon.fr
(body: help) Please, European users only.

bitftp@pucc.princeton.edu
(body: help or ftplist for a list of anonymous ftp sites)

BITFTP@DEARN or BITFTP@vm.gmd.de
(body: help or ftplist for a list of anonymous ftp sites)
(Europe only)

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at
MIT, and is available from the MIT mailserver. For more info on
how to get files by email from MIT, send a message
TO: mail-server@rtfm.mit.edu
SUBJECT: [blank]
BODY:
help
end

Q25. Your Digest and WWW pages only deal with Old Time Radio. Where
can I get similar information about early TV?
A25. The OTR Digest and OTR WWW Pages are purposely self-constrained
to OTR topics. Folks interested in early TV shows might be interested
in this note from Kathy O'Connell (oconnell@pobox.upenn.edu):

Let me announce a brand new TV list!!! A woman named Linda
has just started a list devoted to 50's-60's Television.
You can contact her at LEEKNIGHTS@delphi.com I signed on
immediately, and it's a wonderful place to meet other people
interested in this subject. Very much like the OTR list,
but for television!!!

Q27. I have never heard "Old Time Radio". Can I get an audio sample
via Internet?
A27. Yes, if you have a suitable WWW browser. Connect to any of the WWW
sites mentioned above, and follow the pointers to their audio clips
and / or soundbytes.

Desk Jockey has vanished. I know several of their customers who are very upset by the inability to get support for their products. The number of companies providing similar equipment is numerous. Any copy of Radio World will provide a large sample of offerings. But here are a few:

Arakis - Digilink
Broadcast Programming's Sentry
ITC (the cart machine people) - Digicenter, I believe.
Scott Studios - Music on Hard Disk
Dalet

- Interesting email address you have -

Jon,

We've been using the "AudioVault" for over a year now to run our mostly-syndicated all-sports AM station, and also to run the SPOTS for the AM and one of our FMs (with the other FM coming on-line soon). Sure, it has its episodes every now and then, but if you can keep computer-illiterates off of it, then I say it's a helluva lot better than that Desk Jockey (which was running our AM till we got the A/V).

I don't know what happened to the company. Their product sucked in my opinion, and the AudioVault does pretty well, I think. The company that makes AudioVault is Broadcast Electronics. Hope this helps.

Right back at you Fred,

I hope your pockets are as deep as your soul. They'll have to be to beat the "big guys". When the door to unlimited ownership of facilities opens up, there will be a buying spree the likes of which we haven't seen since the '80s. Maybe you won the lottery out there and are ready to party with your winnings.

I'm going to download this letter to the printer and seal it up for five iyears. I bet when I open it in 2000, the trades will be full of stories full of people saying things like, " Gee we didn't expect the same six companies to buy EVERY station in the top 50 markets! That's hardly fair."

Next to that story will be a puff piece on the noblesse oblige shown by the "Big Guys Broadcasting Consortium"; about how they really needed to decimate local and regional broadcasting " in order to bring it up to their standards".

See you in the coffee shop Fred. Stay away from the donuts.

Regards,

Ty Ford

## 1367. Hotel DX'ing.....

Newsgroup: rec.radio.broadcasting
Date: 1995-07-26 00:00:00 UTC
From: "PETER Q. GEORGE, N1GGP" <PGEORGE@WELLESLEY.EDU>
Message-ID: <3v47cj$e8f@vixen.cso.uiuc.edu>
Source record: 30217

I looked with great interest at the postings on "Hotel Dx'ing", more specifically in the San Diego area. That area is and always will be one of the most over-radioed markets in the country. Doing DX'ing in a hotel, moreso in the newer hotels can be frustrating. First of all, the metal beams and electric wiring can soak up nearly 75% of any signal coming to your radio. Secondly, the digital noise from the in-house phone system and cable feeds (and of course the burglar protection for the TV sets in every room) effectively drowns out what is left of the signal coming to your radio. If you can get close enough to the window, like flush to the glass....you have a good chance of getting some DX. However, you will never get anything close to what you can get OUTSIDE of the hotel. During my trips to Phoenix, I simply went out to the car (in the parking lot outside) and my using the radio in the rental car and my Superadio II and III I have gotten some of the best reception I had ever witnessed. You can imagine hearing "254-5678, the area code is 617 here on WBZ/Radio 1030" driving on Van Buren in Phoenix just before sundown. No sign of KTWO yet that time. This was before the clears were totally broken down in 1986. Subsequent trips were equally fun. Hearing something from 2600 miles away was amazing. In addition, I got typical Border Blasters like XEROK, XERF, XETRA and XEPRS and some long wanted targets like WHAS, KDKA, WLS (even with KDXU in the background) and more. One time I really enjoyed listening to KSL/1160 in C-QUAM stereo with their Sunday night broadcast of the Mormon Tabernacle Choir, live from Salt Lake City. It sounded (no pun intended) "heavenly" ! Also I heard excellent AM stereo reception from KBOI/670 from Boise, KFAM/700 from Salt Lake City (still playing really decent "Beautiful Music" with a signal that could blow the doors down !
Try DX'ing in the car while on your extended vacations. Don't worry about the car's battery, four hours of running the radio is equal to the use of the car's starter on one crank. Have a nice vacation !

I don't know, maybe they are testing the rules. Here in Boulder,
KBCO-AM 1190 is now calling itself (except for top of the hour ID's)
KHOW-2. Apparently they are trying to distance themselves from
their sister station KBCO-FM 97.3 and pair up with the formerly
popular KHOW-AM 630. I don't know why this is because 1190 still
transmits from Boulder (it bleeds over on my non-cordless phone!)
while KHOW transmits from Denver somewhere.

Maybe someone needs to call the feds and ask if this is kosher.

Captain Howdy.

Also try the new release of GoldWave (v3.00b) - it's on beta at the moment,
but due for full release in a month or so. It's quicker than CoolEdit, has a
*much* nicer interface (CoolEdit looks like a DOS program which someone
tweaked to run under Windows, whereas GoldWave has a proper windows
interface, with all the cut/paste functions readily to hand) and has most of
the functions you'd need.

Check out http://web.cs.mun.ca/~chris3/goldwave/goldwave.html

>Vegas NV market, KRRI 105.5 K-Rock & Roll (now KQOL). He not only knew
>about the station, but knew the owners. They were using the Jay Stevens
>package! And the rest they say "Is Radio History !"

Ta-da! I've often thought about giving the KXOA folks a jingle and asking them if they're using the Jay Stevens stuff on AM 1470 here. Sure sounds like it. Do you have any idea how popular the Jay Stevens package was? And was it your idea to make him sound so upbeat when he pronounced "FARRELL!" at the end of the legal ID? ;)

I also find it interesting that the WRQQ call letters are the only ones that have survived since the ol' "Rock" and WAX-FM went off the air in November 1991. The FM went through WHTX and was even going to be renamed WRQQ-FM (!) before finally ending up taking the WRKU call letters from 95.1 and becoming "96 K-Rock". But the AM, now back on the air simulcasting 95.9, is still legally WRQQ.

WRQQ...the AM that refuses to die. ;)

This is an interesting transition; in the New Paltz, NY Z-Rock
affiliate WBWZ 93.3 (and its Middletown, NY translator at 93.1), they
dropped the Z-Rock feed about a year ago and went to an "all 70s, all
the time" format. Bee Gees. We're talking disco 24 hours a day. I
don't know if this is a satellite service; seems like they just dusted
off the local studio's 70s collection when they pulled out the
satellite feed from Z-Rock, because the personalities don't seem to be
focusing on a national audience (you know, they announce the local
time and weather, etc).

# 1373. NYC Spring '95 ARB Ratings & Other Stuff

Newsgroup: rec.radio.broadcasting
Date: 1995-07-26 00:00:00 UTC
From: TRRadio@aol.com
Message-ID: <3v47c5$e7g@vixen.cso.uiuc.edu>
Source record: 30223

WRKS' "Classic Soul and Smooth R&B" format continued to dominate New York's spring ARB. WRKS dropped 7.4-6.7, but still easily dominated the pack:

Kiss 98.7/WRKS 6.7
Hot 97/WQHT 6.1 CHR
Mega 97.9/WSKQ 5.0 Spanish
Z-100/WHTZ 4.6 Modern CHR
WCBS-FM 4.6 Oldies
Lite 106.7/WLTW 4.1 Soft Rock
WABC 4.0 Talk
WINS 3.7 News
WPLJ 3.6 Hot A/C
K-Rock/WXRK 3.3 Classic Rock
**Ratings courtesy of the Ross Brittain Report

Happy 10th anniversary to K-Rock/WXRK--the station kicked off it's Classic Rock format with a live broadcast of Live-Aid in 1985. A couple of months later, Howard Stern joined the station for afternoons, moving to mornings in early 1986 and becoming the #1 rated AM Drive show.

Mike Breen will continue as Knicks Play-by-Play radio voice. He re-signed with WFAN and Madison Square Garden after being courted to take over the NJ Nets TV job. Breen also serves as Imus whipping boy/sportscaster and TV play-by-play voice of Giants football.

Till next time....

Tripp Rogers

# 1374. Nashville Radio Watch 7/23/95

Newsgroup: rec.radio.broadcasting
Date: 1995-07-26 00:00:00 UTC
From: mdonegan@edge.net
Message-ID: <3v47c6$e7i@vixen.cso.uiuc.edu>
Source record: 30224

WSIX-FM (ctry) midday personality Hoss Burns has taken a 30-day medical leave of absence.

WKDA-AM (CNN,talk) morning show talkers Teddy Bart and Karlen Evins will host a midday talk show on WSMV-TV (NBC). The 11am show will replace a midday newscast and will be simulcast on WKDA.

Former WKDF-FM (AOR) midday jock Shannon, who now hosts a country music show on The Nashville Network cable channel, will host a morning show on WSMV-TV slated to begin in September.

WKDF-FM morning show hosts Big Dave and the Dook were recently interviewed by Time magazine regarding their hijinks with New Jersey residents upset over efforts to move the Devils hockey team to Nashville.

AT WLAC-AM (News,Talk) mid-morning talk show host Les Jamison has quit the National Association of Radio Talk Show Hosts board along with two other board members after voicing displeasure about various issues, including the power weilded by NARTSH exec vp Carol Nashe. Ted Werbin, formerly with KMOX-AM and KLOU-FM in St. Louis, has been named news director at WLAC. Rick Sanborn will replace Werbin as WLAC's morning newscaster.

WLAC-FM (AC) personality Phil Valentine, of the Phil and Terry morning show, moves to WWTN-FM (Talk) to host a morning talk show. Valentine formerly co-hosted a talk show at WLAC-AM with Victoria Jones, who was most recently with WRC in Washington. Terry Hopkins stays behind to host mornings at WLAC-FM.

KCSC's the Terry Dorsey Gang in Dallas was the first country radio morning show to simulcast with the Ralph Emery Show on The Nashville Network. This coming friday Emery will feature the morning show at WDAF in Kansas City.

As published in the SD Tribune and Escondido Times Advocate

12+ 6am-mid Winter book to Spring book (not trends).
Spring Book is April-May-June.

Station Format Winter 1995 Spring 1995 <=my notes/obs.
KYXY-FM AC 5.4 7.2 <AC now number one in SD
KSON-FM Country 6.5 6.6 <down, but not out
XHTZ-FM Urban 5.2 5.1 <Z90 continues strong
KSDO-AM Talk 5.3 4.9 <Listners going to KFMB?
KKLQ-FM CHR/T-40 4.5 4.6 <continues rebound from 94
XETRA-FM 91X Alt. Rock 3.6 4.1 <Stern's first book helps
KIFM-FM Jazz 3.8 4.0 <Jazz FM. :-)
KIOZ-FM Rock 3.0 3.8 <Mornings are good
KFMB-AM Full Service 3.1 3.6 <Padres + Taylor/Leitner
KBZT-FM Oldies 3.6 3.5
KGB-FM Rock 3.9 3.4
KFSD-FM Fine Arts 3.8 3.2
KFMB-FM AC 'Star` 2.5 3.1 <
KKBH-FM AC "The Beach" 2.4 2.9 <Local feel with moniker
XHRM-FM Alt. Rock 2.3 2.5 <format defined now
KMKX-FM Rock Mix 3.0 2.5 <first full book,was AC
KOGO-AM Talk 2.4 2.5 <O.J. coverage continues
KFI-AM LA Talk 2.1 2.4 <signal is like a local
KPOP-AM Adult 4.1 1.9 <-- :-( biggest drop!
XETRA-AM 3.1 1.9 <expected. Football a
winner
KCBQ-FM Rock 2.5 1.9 <will rebound
KOWF-FM Country 1.3 1.8 <surprised! a N.C. station
KNX-FM LA News 2.2 1.6 <O.J. burnout?
XELTN-FM SS Latino A 1.0 1.2 <Top espanol station.
XHKY-FM SS 2.0 1.2
KSPA-AM Adult 1.0 0.9
KCEO-AM Financial/talk 1.1 0.9 <limited signal north/south
KURS-AM SS 1.1 0.7
KWVE-FM Rel * 0.6 <at KPRZ's expense?
KLOS-FM LA Rock * 0.6 <Mark & Brian holdouts in
SD
KKOS-FM AAA 0.6 0.5 <will move to 95.7 & up ERP
KCBQ-AM Olies 0.7 0.5 <50kw days. good music
too.
XKAM-AM ?? * 0.5
KPRZ-AM rel 0.8 0.5 <KWVE up. Rel. radio wars?
XHFG-FM SS * 0.4
KSON-AM country 0.3 0.4 <AM side of FM

XEMO-AM SS 0.9 0.4 <AM powerhouse from Baja
KKLQ-AM CHR * 0.1 <AM side of FM

Who to watch for: KKBH. Why? Ads, ads, and ads. Local feel. Star format for KFMB is same as LA's KYSR.
KSON: the country station is looking to regain the top mark in San Diego.

Overall, KFI pulls in better numbers than the San Diego based talk stations. KFI, targeted to the LA basin, must be :-), as this is a bonus to their top-rated LA numbers.

Duops and combos:
SFX: KyXy & KMKX: 9.7 KSDO & KKBH: 7.8
XETRA A/F: 6.0 Par: KOGO,KKLQ A/F & KIOZ: 11.0
KFMB A/F: 6.7 KCEO/KKOS: 1.4 [North County based]
KPOP/KGB: 5.3 KCBQ A/F: 2.4

[and if I missed any, it's not intentional, my dog-eared M-street is home, resting from it's LA Radio Log workout: experience it: http://www.geopages.com/RodeoDrive/1102/

[talking with workmates, the espanol stations would be better if the population of Tijuana were polled too. I don't know if there are any ratings south of San Ysidro for Baja. But, I bet it's the same as LA: espanol is number one overall.]

Missing: KBNN. I LIKE this station: why? It's a local sports thing. They cover high school sports [in season of course].
KBAX, Fallbrook. Part of the trio that is attempting an alternative from the #1 Sports Station in America: XETRA-AM 690. Xtra's drop is expected in the spring with the football fall off and no baseball team. Their fall package [XETRA] is GREAT.

In article <3umpse$m4t@vixen.cso.uiuc.edu>, talk1370@aol.com says...
>
> You bring out a very interesting point...AM's disadvantage (only
>partly overcome by its transition to less fidelity-sensitive spoken
>word programming) is not a function of AM modulation or the
>medium wave band itself, at least not for the most part. Today's
>transmission standards permit flat audio response at least out to
>10 kHz; we transmit a flat signal 30 Hz-10 kHz,

The 1946 RA 250 Raytheon we had would / will do that flat within a db with
low distortion.

> Why? It's the receivers, especially the tuner sections, that roll off
>AM sgnals rapidly above about 5 to 7 kHz. Some genius decided many
>years ago, that this reduced the objectionable effects of lightning and
>other natural and man-made sources of noise and static, even though it
>really makes little practical difference except to degrade the quality of
>the received signal 99% of the time.

Bob, you are right and cheapness as well plays into the picture. Not to
mention low sensitivity.

> The saving of the medium waves now, especially as Rush &
>Co. show signs of running out of gas, may be a combination of new
>voices on talk radio to rekindle interest in the short term, AND in-band/
>on-channel digital radio standards which will literally level the playing
>field for medium wave and FM-band stations once again.
>Bob Smith, middays WXXI-AM 1370 Rochester NY

And the FCC blows a lot, Bob. Another pet peave an AM left on just to
silmulcast someone else's AM in the same market or an FM. Then here is one
that might annoy you. On 1370 34 out of the 70 stations have flea powered
(under 250 watts) night time authority. How many are using them for
community service or just letting it run? I expect this really bites into
the night time range you have and substantially raises the noise level. I
find it is really easy to get a handful of watts to skip on the upper end of
the band as compared to the low end. And then we have problems down here of
some of these stations repeatedly forgetting to cut power ....1080 has been
a recent hotbed of this.

It turns out that my parent's house, in Bergen County (northeast NJ) is north of WABC's antenna in Lodi, NJ. We did NOT loose power (apparently someone on duty at our power company didn't like the long distance powerline meter readings, and quickly disconnected before they would have gotten sucked down) and WABC's transmitter stayed on as well. The *studio* in New york City was dead, though. Heard an aircheck of Dan Ingram (who was doing a show as New York's Con Ed power company was slowly dying "Really weird in this studio, the lights are dim, the electricity is slowing down (you could hear their cart machines playing songs and jingles too slowly, the powerline frequency was steadily dropping below the normal 60Hz (happens when the generators can't keep up with the load)), I didn't think that could happen!" That studio went flat during a newscast. I understand someone drove out from NYC to Lodi with a box of records or tapes, to broadcast from a small studio at the Lodi transmitter site.

All the TV channels went dead, I heard many people thought their front end tuner tubes burnt out, and bought new ones. (urban legend?). My father then tried the FM radio, found that almost all NYC stations were also dead, We did hear a few Jersey stations.

We never lost our power.

> 
> 

The Post got it right for once. Outsourcing news will be the wave of the future because $300,000 a year radio news departments in mid markets are no longer supportable with the fragmentation of the audience.

Put it another way:

When I was growing up, there were three stations in most markets. A Country station, A Rock and Roll station and a Middle of the Road station. Each had a huge market share. Each license was an almost literal license to print money.

Today in Tulsa there are 45 stations. KRMG and KVOO still maintain huge news departments (bless them for they are my competitors and help keep me strong by making people listen to AM) but it is an obvious burdon which will probably not outlast the decade.

I take my local news from Channel 8. Why not? They do a great job.

But a Tulsa radio news bureau or a co-operative of five or ten stations is not only not out of the question but a real probability.

My goal as an owner is to provide my audience with the best programming I can. Network news is a commodity. I have Bloomberg, NBC, UPI and the rest of the usual suspects.

If I can buy national news that works, why can't I buy local news?

It's not better or worse than the way it used to be--just different.

But the bottom line is simple, if I don't have a 33share, I can't afford $300,000 a year. The numbers are different in DC, but the concept is the same.

Hey Jon-
Sorry to hear about your problems. I do nights in St. Cloud Mn about 1 hour north of Minneapolis/St. Paul. It's a top 40 station but if I'm not mistaken, the most successful country stations are the ones that follow top 40 formatics. I feel your pain with trying to come up with survey questions (I called mine Street Buzz.) It got verrry tiring after a while. I to do a countdown, but mine is 5 songs long (quick, easy, and to the point.) I do a request and dedication jam for an hour every night. Put everybody that calls on the air, make fun of them, joke around whatever. The biggest advantage you have over the #1 station is you're LIVE. Use it!!! Put the best sounding females on the air ALL THE TIME! I tried doing a feature called "Desperate and Dateless" kind of like a love connection on the radio. "Bait your mate" is fun...Get a female that suspects her man of cheating on her. Call him up using another female, while she listens to the whole conversation. The point is to get him excited and hopefully commit to going out with her (keep in mind his girfriend/wife is listening to the whole thing!) Get people live in studio to introduce songs and hang out. This creates a high energy sound to the radio station. Or get out in the station vehicle and broadcast live from where all the people are hangin out. If you try some of this and your audience is receptive towards it, you could see better ratings...If not perhaps the music (the MOST important element of ANY music station) is off...That's programmings fault, not yours. GOOD LUCK, and I'll try to think of more things I've tried that have worked.
By the way...Mich Golden bottles!!!!!
Thank You
Mike Danger, Nights/M.D.

Just a quick question....
Does anyone know why the program "Pipe Dreams" from Minnesota Public Radio is being discontinued on Washington's WETA and WETH? All phone calls to the station have been ignored and I'd really appreciate an answer. Is the program being cancelled or is it a local programming decision? Is there another station in my area (Washington/Baltimore/Hagerstown, Md/Martinsburg, W.Va) that carries the program? Any help would be greatly appreciated.
Thanks in advance,
Dave

From: jacques@connections.ebicom.net
Message-ID: <3v47d5$ea2@vixen.cso.uiuc.edu>
Source record: 30241

Anyone remember the superpower WLW in Cincinnati
that used to run so much power the barn lights would light for miles
around without having the electricity turned on?

Anyone around who can tell stories about that?

Whatever happened to the Big organ they had they used to play at
night, I think they played Moon River didn't they?

Mr. Crosly was quite an entrepreneur, back when radio was fun.
Now it is just the same old on every station.

What ever happened to the old RCA Transmitter that put out all the
power? Last I knew the name plate was in the Public TV station
studios downtown, Serial #1.

The advertisers may not complain...but they probably should. One result of the "long music sweeps", is that in between them, we now get long commercial sweeps as well ("Coming up next on KXXX, another 5 commercials in a row!"), and it has definitely gotten worse. In the late 70's, most radio stations (at least where I grew up) ran four or five breaks an hour, but those breaks were typically only two minutes long. Now, stations typically run two breaks an hour, but they run four or five minutes each. That's longer than many songs. And listeners certainly do change stations, especially in the car. After all, if you're on a short (five or ten minute) drive, the commercial break could last most of the time you're in the car.
Speaking for myself, I found the shorter commercial breaks much less intrusive, and I wish they would come back.

In article <3uv6jc$pfo@vixen.cso.uiuc.edu> you wrote:

: John Ogle. Last heard from in the Washington, DC area.

Mr. Howell:

John Ogle left his job at then WCPT for a teaching job. The station was
CNN Headline News at the time (now All-Business) and he did the morning
news updates. His casts were no-nosense and good. According to a
Washington Post article from last year or so, he left the job to spend
more time with his family and pursue teaching some broadcasting classes
at a local community college (I don't remember which one).

Hope the helps.

> Oh Hades, that's all I really have to write.

You're referring to Brother Wease,I believe.

Yes,he's still at WCMF-FM(his show is also simulcats on its sister
station,Sports Radio 990(WCMF-AM)). Still gets very good ratings in AM drive.
Also,he's been nominated for the best Local Air Personality for Rock radio
in a medium market this year.

I thought I had found a retailer that had one of these available, but as of today I'm not sure.....

Anyone know of a place that specializes in used decks like these?

The one place that I still not have heard back from, wanted something like $2000.....

thanks...

Rob

Oh...actually, I would've thought it would be the other way around - these
bands are so big that they don't *need* promotion through radio. My mistake!

>>"Classic Rock" and "The Alternative to Classic Rock" (ie. "New/Modern Rock").

Well, I know the way *I* buy music is -- I drive OUTSIDE Philadelphia and
discover, from listening to distant non-Philly stations, what I'm missing!!
I'm always searching for new pop music, and the stuff has the hell researched
out of it...so that no Philly station plays half the new stuff that comes out.

>K-Rock...Weekends are best in the entire NY/NJ area for hearing cuts not put
>>down in ten years or better.

That's fine...keep Led Zeppelin and Lynard Skynard on WXRK and let WNEW crank
out nothing but the new stuff.
